Richard E. Mayer, PhD Professor of Psychology University of California, Santa Barbara
For more than half a century, the construct of styleówhether designated as cognitive, thinking or learningóhas been in or out of fashion in the history of psychology and education. The editors of the

present Handbook have invigorated the style construct in the form of intellectual styles, and have brought together a distinguished international panel of chapter authors who offer up-to-date surveys of the assessment, development, correlates, and educational and organizational applications of intellectual styles. For those seeking to familiarize themselves with current theory and research in an intellectually exciting field, the present Handbook is essential. Nathan Kogan, PhD Professor Emeritus, Department of Psychology New School for Social Research, New York, NY The concept of intellectual styles has had a controversial history based on diverse philosophical and theoretical foundations. Most recently, the idea of intellectual styles as an umbrella term that covers such closely related constructs as cognitive styles, learning styles, teaching styles, and thinking styles has gained momentum as an explanation for why different people succeed in different professional and organizational settings. Previously, it was thought that high-achievers simply had more innate abilities than their less successful peers, but research has shown that individuals have different intellectual styles that are better suited for varying types of contexts and problems. Based on the most current and expansive research, this handbook is the first to provide a comprehensive review of research on the construct of intellectual style, from its foundations and development, to its relations to allied constructs, its roles in school and job performance, its applications in various populations, and its future. This understanding of intellectual styles as a valid concept for both individuals and groups has far-reaching implications for researchers in cross-cultural psychology, multicultural education, organizational behavior and work performance, and many other academic disciplines, as well as practitioners in education and beyond. Key Features: Provides a comprehensive review of intellectual styles from multiple perspectives Written for students and scholars in diverse academic arenas, as well as practitioners in education and other fields Includes contributions from researchers from diverse disciplines, such as psychology, business, education, and health sciences

Human Rights Manual and Sourcebook for Africa

The purpose of this handbook, originally published in 1984, was to provide a comprehensive review of current clinical descriptions, research, and theories of psychopathology. Descriptive psychopathology is a field that forms the foundation of clinical practice and research in clinical psychology, psychiatry, psychiatric social work, psychiatric nursing, and allied professions in mental health. Since the 1st edition, the editors have devised and updated a handbook to cover both general and specific topics in psychopathology that would be useful to researchers, practitioners, and graduate or other advanced students in the mental health and behavioral medicine professions. To implement this plan, we have very carefully chosen colleagues whom we respect for their expertise in particular fields. These authors include both clinicians and researchers who have outstanding national reputations, as well as more junior behavioral scientists and clinicians who, in our opinion, will achieve similar recognition in the future. The excellent chapters in this book lead us to believe that we have chosen wisely. We would like to express our appreciation to these authors for their outstanding contributions and cooperation.

At a time when the issue of human rights in Africa is making many advances, Human Rights Sourcebook and Manual for Africa introduces easy-to-use jurisprudence. The first section covers key principles and human rights norms which are detailed in straightforward language. The second section is devoted to the death penalty, detailing the relevant provisions from both international and regional instruments and offering a comparative commentary as to how the principles and relevant rights relate to the death penalty. The third section summarizes key case law from international, regional and domestic African courts and tribunals. The case summaries detail the facts and decisions and include a headnote of relevant concepts for quick reference. The fourth section focuses on thirteen African countries, yet the reports are a useful comparative resource for all countries. From conducting the research and compiling the material for this final section, it is apparent that nothing like this has been attempted before in Africa. Much of the work emanates from primary research and investigation conducted by local research teams in the individual countries. Investigative research includes visiting prisons, physically counting the individuals on death row and interviewing the detainees to obtain their age and the length of time they had been on death row.
