Learn pharmacology with the trusted text written specifically for surgical technologists! Pharmacology for the Surgical Technologist, 5th Edition ensures that as an integral member of the operating room team, you have an in-depth understanding of surgical medications. It covers everything a surg tech needs to know, including basic pharmacology, dosage calculations, safe handling of medications, terminology, and drug effects and side effects. If you are interested in becoming a surgical first assistant, many chapters also include coverage of advanced practice. Written by Tiffany Howe, CST, CSFA, FAST, MBA, an educator, and Angie Burton, CST, FAST, a practicing surg tech, this book covers all areas of pharmacology designated in the AST Core Curriculum for Surgical Technology. Coverage of pharmacology meets the needs of the Surgical Technologist and includes all areas designated in the AST Core Curriculum for Surgical Technology, 6th Edition. Advanced Practice sections in each chapter provide content relating to the role of the first surgical assistant, helping students who want to advance to that role, and keeps this text useful as a professional reference. Concise three-part organization makes it easier for students to understand 1) the foundations of pharmacology, mathematics, and drug administration, 2) applications of pharmacology to the surgical environment, and 3) preoperative medications, types of anesthesia, and emergency situations. Caution boxes highlight drug alerts and surgical safety issues. Chapter study questions help students measure their knowledge and apply it to practice, and serve as an excellent review tool for classroom and certification exams. Insight boxes provide in-depth, cutting-edge information on specific products, procedures, and processes in the operating room. Learning features include Tech Tips from experts, Quick Question boxes with quizzes on foundational knowledge, Make It Simple boxes reviewing medical terminology, and Notes simplifying difficult concepts. Comprehensive glossary defines key terms highlighted in the text. Evolve companion website includes up-to-date drug monographs and additional exercises allowing students to practice math calculations. NEW! Coverage of new drugs includes antibiotics frequently used in the operating room. NEW! Content map correlates the content in the text to the requisite components of the pharmacology portion of the AST Core Curriculum for Surgical Technology. NEW author team blends theory and practice, with easy-to-read explanations from Tiffany Howe, CST, SDFFA, FAST, MBA, an instructor of surgical technology, and Angie Burton, CST, FAST, a practitioner of surgical technology.

MACE Exam Cram

The Basic Bookshelf for Eyecare Professionals is a series that provides fundamental and advanced material with a clinical approach to clinicians and students. A special effort was made to include information needed for the certification exams in ophthalmic and optometric assisting, as well as for surgical assistants, opticians, plus low vision, and contact lens examiners. This book contains basic guidelines and typical scenarios that the ophthalmic surgical assistant needs to know. The text begins with the operative patient, including preoperative testing and consents, and travels through the operating room experience. Topics include gowning and gloving, preparing trays and tables, and sterilization techniques. Detailed descriptions of common operative procedures such as plastics, cataract, corneal, and retinal procedures are also included. Operative notes are written on a minute-by-minute basis so the reader can become familiar with the instruments and other implements, and the order in which they are used. This text will help prepare the ophthalmic assistant for any setting, whether it be hospital or office based.
