### The Subtle Ruse

Ever since the Soviet invasion of Afghanistan in 1979, fighters from abroad have journeyed in ever-greater numbers to conflict zones in the Muslim world to defend Islam from-in their view- infidels and apostates. The phenomenon recently reached its apogee in Syria, where the foreign fighter population quickly became larger and more diverse than in any previous conflict. In *Road Warriors*, Daniel Byman provides a sweeping history of the jihadist foreign fighter movement. He begins by chronicling the movement's birth in Afghanistan, its growing pains in Bosnia and Chechnya, and its emergence as a major source of terrorism in the West in the 1990s, culminating in the 9/11 attacks. Since that bloody day, the foreign fighter movement has seen major ups and downs. It rode high after the 2003 US invasion of Iraq, when the ultra-violent Al Qaeda in Iraq (AQI) attracted thousands of foreign fighters. AQI overreached, however, and suffered a crushing defeat. Demonstrating the resilience of the movement, however, AQI reemerged anew during the Syrian civil war as the Islamic State, attracting tens of thousands of fighters from around the world and spawning the bloody 2015 attacks in Paris among hundreds of other strikes. Although casualty rates are usually high, the survivors of Afghanistan, Syria, and other fields of jihad often became skilled professional warriors, going from one war to the next. Still others returned to their home countries, some to peaceful retirement but a deadly few to conduct terrorist attacks. Over time, both the United States and Europe have learned to adapt. Before 9/11, volunteers went to and fro to Afghanistan and other hotspots with little interference. Today, the United States and its allies have developed a global program to identify, arrest, and kill foreign fighters. Much remains to be done, however-jihadist ideas and networks are by now deeply embedded, even as groups such as Al Qaeda and the Islamic State rise and fall. And as Byman makes abundantly clear, the problem is not likely to go away any time soon.

There are a lot of books out there that show collections of logos. But David Airey's "Logo Design Love" is something different: it's a guide for designers (and clients) who want to understand what this mysterious business is all about. Written in reader-friendly, concise language, with a minimum of designer jargon, Airey gives a surprisingly clear explanation of the process, using a wide assortment of real-life examples to support his points. Anyone involved in creating visual identities, or wanting to learn how to go about it, will find this book invaluable. - Tom Geismar, Chermayeff & Geismar In Logo Design Love, Irish graphic designer David Airey brings the best parts of his wildly popular blog of the same name to the printed page. Just as in the blog, David fills each page of this simple, modern-looking book with gorgeous logos and real world anecdotes that illustrate best practices for designing brand identity systems that last. David not only shares his experiences working with clients, including sketches and final results of his successful designs, but uses the work of many well-known designers to explain why well-crafted brand identity systems are important, how to create iconic logos, and how to best work with clients to achieve success as a designer. Contributors include Gerard Huerta, who designed the logos for Time magazine and Waldenbooks; Lindon Leader, who created the current FedEx brand identity system as well as the CIGNA logo; and many more. Readers will learn: Why one logo is more effective than another How to create their own iconic designs What sets some designers above the rest Best practices for working with clients 25 practical design tips for creating logos that last

At the heart of Dickens's second novel is a story as much about crime and poverty as it is about justice and charity. Orphaned at birth, Oliver Twist grows up under the loveless, relentless watch of a workhouse. He runs away with hopes for a better life in London, only to become-at the hands of the unforgettable Artful Dodger-a guileless pawn in a gang of pickpockets and robbers working for Fagin, one of Dickens's most controversial villains. Full of ingenious plot twists, at turns thrilling, tragic, tender, and sharp-eyed, Oliver Twist is among Dickens's most enduring classics; the story of a young orphan who dares to say, "Please, sir, I want some more."

A warning: never before in recorded history has humankind faced a crisis like the one which lies directly in our path. An unstoppable cataclysmic fiscal event is rapidly approaching which is going to wipe out a large portion of the world's population. Make no mistake about it, those holding positions at the highest levels of government are well aware that a monster is coming our way-but there is a paradox. Although this single event is going to leave the vast majority who survive desperate and destitute, never before has there been a greater opportunity for those with little or no net worth to become massively wealthy. It is at times like this where fortunes (and lives) are lost, and also made. This book illuminates the

dark forces at work behind the guise of governance and the clandestine multi-billion dollar trades on Wall Street.

Reveals the cutting edge of New Science and shows how established science disallows inquiry that challenges the status quo--even when it produces verifiable results • Contains 43 essays by 19 researchers denoting cutting-edge, heretical, or suppressed scientific research, including Immanuel Velikovsky, Nikola Tesla, Rupert Sheldrake, and Masaru Emoto • Edited by Atlantis Rising publisher, J. Douglas Kenyon Following the model of his bestselling Forbidden History and

Forbidden Religion, J. Douglas Kenyon has assembled from his bimonthly journal, Atlantis Rising, material that explores science and technology that has been suppressed by the orthodox scientific community--from the true function of the Great Pyramid and the megaliths at Nabta Playa to Immanuel Velikovsky's astronomical insights, free energy from space, cold fusion, and Rupert Sheldrake's research into telepathy and ESP. There is an organized war going on in science between materialistic theory and anything that could be termed spiritual or metaphysical. For example, Masaru Emoto's research into the energetics of water, although supported by photographic evidence, has been scoffed at by mainstream science because he has asserted that humans affect their surroundings with their thoughts. The materialism or absolute skepticism of the scientific establishment is detrimental to any scientific inquiry that thinks outside the box. This mentality is interested in preserving funding for its own projects, those that will not rock the establishment. From Tesla's discovery of alternating current to Robert Schoch's re-dating of the Sphinx, this book serves as a compelling introduction to the true history of alternative and New Science research.

Bachelor Thesis from the year 2018 in the subject Pedagogy - School System, Educational and School Politics, grade: 5 (GHA-System), University of Education (Distance Learning), course: Post Graduate Diploma in Education, language: English, abstract: Students' academic performance is a key feature in education. This study was therefore conducted primarily to assess the factors contributing to improvement in academic performance of Junior High Students (JHS) in a Basic School which is in the Gomo-East District in the Central Region of Ghana. The mixed and descriptive research design was used and a sample size of 87 respondents (79 students and 8 teachers) were selected through random sampling technique. The findings revealed that the average academic performance (47.0%) of the JHS students in the Basic School is weak and their performance in Mathematics (average score of 31.48%) and English Language (average score of 39.99%) is a fail. It was noticed that student factors that contribute to an improvement in academic performance include; regular studying, self-motivation, punctuality and regular class attendance, hard-work and interest in a subject. The teacher factors were completion of syllabus, use of TLM's, frequent feedback to students and given students special attention. Per the findings, parent factors which was very key was parent showing concern in their children's academics and providing them their academic needs. School factors that were significant included availability of text books and TLM's. The study also found that parent level of education and gender has a positive relationship with academic performance but it's insignificant. However, age has a positive significant (5% significance level) relationship with academic performance. Based on findings, the study recommends that there should be strict monitoring on teachers to vary their teaching methods to suit their needs of the students and also to provide the students with constant feedback on their academic performance. Again, the students should be motivated and orientated to take ownership of their studies by having regular studies and attending school during school days.

This book explores how African countries can convert their natural resources, particularly oil and gas, into sustainable development assets. Using Ghana, one of the continent’s newest oil-producing countries, as a lens, it examines the “resource curse” faced by other producers - such as Nigeria, Angola, and Equatorial Guinea - and demonstrates how mismanagement in those countries can provide valuable lessons for new oil producers in Africa and elsewhere. Relying on a broad range of fieldwork and policymaking experience, Panford suggests practical measures for resource-rich developing countries to transform natural resources into valuable

assets that can help create jobs, boost human resources, and improve living and working conditions in Ghana in particular. He suggests fiscal, legal, and environmental antidotes to resource mismanagement, which he identifies as the major obstacle to socioeconomic development in countries that have historically relied on natural resources.

In many university curricula, the power electronics field has evolved beyond the status of comprising one or two special-topics courses. Often there are several courses dealing with the power electronics field, covering the topics of converters, motor drives, and power devices, with possibly additional advanced courses in these areas as well. There may also be more traditional power-area courses in energy conversion, machines, and power systems. In the breadth vs. depth tradeoff, it no longer makes sense for one textbook to attempt to cover all of these courses; indeed, each course should ideally employ a dedicated textbook. This text is intended for use in introductory power electronics courses on converters, taught at the senior or first-year graduate level. There is sufficient material for a one year course or, at a faster pace with some material omitted, for two quarters or one semester. The first class on converters has been called a way of enticing control and electronics students into the power area via the "back door". The power electronics field is quite broad, and includes fundamentals in the areas of • Converter circuits and electronics • Control systems • Magnetics • Power applications • Design-oriented analysis This wide variety of areas is one of the things which makes the field so interesting and appealing to newcomers. This breadth also makes teaching the field a challenging undertaking, because one cannot assume that all students enrolled in the class have solid prerequisite knowledge in so many areas.

## **Factors contributing to academic performance of students in a Junior High School**

Rafael de Grenade was twelve years old when she quit school and soon began to work on a rough-country mountain ranch in Arizona. There she learned how to sleep out when there was no fast way home; how to track her way by familiar spires and rivers; how to survive off the water that seeped from moss hidden in the valleys. But when she read about cattlemen working the far edges of the Australian outback, they sparked a dream in her far wilder than anything she had ever known. A little over a decade later she arrived on Stilwater Station with two shirts, two pairs of jeans, cowboy boots, and some doubt that she would ever come home. One thousand square miles of costal scrub—inundated by monsoon floods in the winter, baked dry in the summer, and filled with the most deadly animals in the world—Stilwater seems an unlikely home for a cattle operation. But in the countless miles beyond the station compound roam tens of thousands of cows, many entirely feral from a long period of neglect. Rafael has been hired, along with a ragged crew of ringers and stockmen, to bring them in for drafting. Over a season they use helicopters, motorcycles, bullcatcher jeeps, horses, ropes, and knives to win Stilwater Station back from the wild, to say nothing of their intuition, strength, muscle and wit. A deeply poetic inquiry into our desire to make order where we find wildness, *Stilwater: Finding Wild Mercy in the Outback* suffuses us with salt and scrub and blood, blurring the line between domestic and feral in wondrous, unsettling ways. This is a whirlwind of men, women, cattle, horses, machines and landscape in collaborative evolution, all becoming different manifestations of the same entity—the Australian Wild.

Eight stories from the author of *A Book of American Martyrs* that display her “mastery of imagery and stream of consciousness” (Kirkus Reviews). Joyce Carol Oates is an unparalleled investigator of human personality. In these eight stories, she deftly tests the bonds between damaged individuals—brother and sister, teacher and student, two lonesome strangers on a subway—in the beautiful, bracing prose that has become her signature. In the title story, a white, aspiring professor in Detroit tries to shake a black, male shadow during the summer of the city’s 1967 race riots. In “The Rescuer,” a promising graduate student detours to inner-city Trenton, New Jersey, to save her brother from a downward spiral, only to find herself entranced by his dangerous new world. Meanwhile, a young woman prowls the New York City subways in search of her perfect man in “Lorelei.” In each of these short stories, Oates portrays a desperate confrontation with the demons inside us. Sometimes it’s the human who wins, and sometimes it’s the demon. “Oates offers unexpected glimmers of redemption amid the grotesquerie, degradation, and exploitation that fill this collection’s eight tales.” —Publishers Weekly

This book presents a mathematically-based introduction into the fascinating topic of Fuzzy Sets and Fuzzy Logic and might be used as textbook at both undergraduate and graduate levels and also as reference guide for mathematician,

scientists or engineers who would like to get an insight into Fuzzy Logic. Fuzzy Sets have been introduced by Lotfi Zadeh in 1965 and since then, they have been used in many applications. As a consequence, there is a vast literature on the practical applications of fuzzy sets, while theory has a more modest coverage. The main purpose of the present book is to reduce this gap by providing a theoretical introduction into Fuzzy Sets based on Mathematical Analysis and Approximation Theory. Well-known applications, as for example fuzzy control, are also discussed in this book and placed on new ground, a theoretical foundation. Moreover, a few advanced chapters and several new results are included. These comprise, among others, a new systematic and constructive approach for fuzzy inference systems of Mamdani and Takagi-Sugeno types, that investigates their approximation capability by providing new error estimates.
