## **Bone Structure | Anatomy and Physiology I**

GROUP OF CELLS FORM TISSUE..SO BONE TISSUE IS FORMED OF FIVE TYPES OF BONE CELLS. Bone tissue contains five basic types of bone cells. There are cells which are responsible for the response of the

### **Answer Key to Short Answer Questions for**

Choose all the answers that apply. Connective tissue \_\_\_\_\_. Covers the outside of an organism. Holds organs and other tissue in place. Lines the inside of hollow organs. Cushions the body and stores energy. Attaches muscle to bone. Joins bones together.

### **Answered: A Case Study on Bone Tissue Structure... | bartleby**

Short Answer Questions. 1. One way bones are classified is by their shape. How would you classify the bones fractured by Mrs. Morgan? 2. The body of Mrs. Morgan's vertebra is fractured. What type of bone tissue makes up the majority of the vertebral body? Describe the structure and function of this type of bone. 3.

### **Bing: Answers To Bones Bone Tissue**

Compact bone is hard due to mineral deposits of calcium carbonate and calcium

phosphate (calcium and phosphorus). This bone consists of tightly packed osteons or haversian systems and many layers with few gaps on this tissue therefore it is dense and hard. The hard minerals and flexible collagen makes bone strong.

### **Healthy Bones Matter: Quiz Questions | NIAMS**

Four types of cells are found within bone tissue: osteoblasts, osteocytes, osteogenic cells, and osteoclasts (Figure 5). The osteoblast. is the bone cell responsible for forming new bone and is found in the growing portions of bone, including the periosteum and endosteum.

### **VLQ. Intramembranous Ossification Endochondral Oss**

What statements describe bone remodeling. 1.It occurs throughout your lifetime. 2.It involves bone resorption. 3.It involves bone deposition. 4.It occurs at different rates at different locations. 5.It occurs at a faster rate in compact bone than spongy bone. 6.Osteoclasts and osteoblasts will be working on the same tunnel simultaneously. 7.Osteoclasts place calcium and phosphorus directly into the bloodstream.

### **What is the function of bone tissue? - Answers**

Leg bones act as pillars to support the body trunk, and then ribs support the thorax wall. 2. Protection- skull and vertebrae surround soft tissue of the nervous system, and the rib cage protects vital thoracic organs. 3. Movement- skeletal muscles use the bones as levers to move the body. 4. Storage- fat stored in the interior of the bones.

### **Chapter 6- Bones and Bone Tissues Flashcards | Quizlet**

The right answer is c. Lacunae.. The cavities of the bone tissue where the osteocytes are present are known as lacunae. The lacunae are found lining in between the lamellae of the bone along with

### **Quiz+ | Quiz 6: The Skeletal System: Bone Tissue**

The hardest, most dense part of the bone tissue is the. answer choices . periosteum. spongy bone. osteoblast. compact bone. Tags: Question 3 . SURVEY . 30 seconds . Q. Covering on the end of the bones as represented in structure D. Also on the end of B. Provides protection.
