Studying, Interpreting, and Applying the Bible combines into one volume the popular trilogy by Walter Henrichsen and Gayle Jackson: - A Layman's Guide to Studying the Bible - A Layman's Guide to Interpreting the Bible - A Layman's Guide to Applying the Bible This book will help students as well as ministers, young people and old alike, as they learn to study Scripture more easily and conveniently. The chapters on studying the Bible help the beginning or experienced Bible student mine God's Word for its riches through verse analysis, chapter analysis, the overview of a book, the study of a topic, and the study of Bible characters (including charts, diagrams, and other helpful illustrations). The unit on interpreting the Bible explains Bible interpretation based on grammar, history, and theology. The section on applying the Bible moves beyond study to life applications, enabling a person to - be motivated to make personal application - move beyond a "to do" list to an internal desire to obey - consider the risks involved in obeying - use specific application principles

#1 New York Times Bestseller “SignificantThe book is both instructive and surprisingly moving.” —The New York Times Ray Dalio, one of the world’s most successful investors and entrepreneurs, shares the unconventional principles that he’s developed, refined, and used over the past forty years to create unique results in both life and business—and which any person or organization can adopt to help achieve

their goals. In 1975, Ray Dalio founded an investment firm, Bridgewater Associates, out of his two-bedroom apartment in New York City. Forty years later, Bridgewater has made more money for its clients than any other hedge fund in history and grown into the fifth most important private company in the United States, according to Fortune magazine. Dalio himself has been named to Time magazine's list of the 100 most influential people in the world. Along the way, Dalio discovered a set of unique principles that have led to Bridgewater's exceptionally effective culture, which he describes as "an idea meritocracy that strives to achieve meaningful work and meaningful relationships through radical transparency." It is these principles, and not anything special about Dalio—who grew up an ordinary kid in a middle-class Long Island neighborhood—that he believes are the reason behind his success. In Principles, Dalio shares what he's learned over the course of his remarkable career. He argues that life, management, economics, and investing can all be systemized into rules and understood like machines. The book's hundreds of practical lessons, which are built around his cornerstones of "radical truth" and "radical transparency," include Dalio laying out the most effective ways for individuals and organizations to make decisions, approach challenges, and build strong teams. He also describes the innovative tools the firm uses to bring an idea meritocracy to life, such as creating "baseball cards" for all employees that distill their strengths and weaknesses, and employing computerized decision-making systems to make believability-weighted decisions. While the book brims with novel ideas for organizations and institutions,

Principles also offers a clear, straightforward approach to decision-making that Dalio believes anyone can apply, no matter what they're seeking to achieve. Here, from a man who has been called both "the Steve Jobs of investing" and "the philosopher king of the financial universe" (CIO magazine), is a rare opportunity to gain proven advice unlike anything you'll find in the conventional business press.

This is followed by separate chapters on concepts such as supply and demand; production and distribution; national income; money, banking, and prices; international trade; and economic policy. Each chapter is divided into four main sections—textual summaries of the ground covered, questions and problems in economic analysis, questions and exercises on the U.K. economy, and essays. From Principles of Learning to Strategies for Instruction Part One The purpose of this book is to help educators and training developers to improve the quality of their instruction. Unlike other available works, the text is not limited to a particular theoretical position. Nor is it like many of the instructional design texts, which ignore the learning literature. Rather, it draws upon any and all of those research-based principles regardless of learning theory, which suggest heuristics to guide instructional strategies. The approach of the authors is unique in that they develop a framework or model taxonomy for tasks, through which the principles of learning can be related to particular learning processes, suggesting distinctive strategies for specific instructional tasks. The authors present a four-stage model that includes acquisition, automaticity, near term transfer, and far term transfer. Workbook Companion Part Two In this Workbook Companion, the strategies presented in the original book are expanded by supplying practical and specific strategies to implement of a variety of other subject matters. These strategies are based on the needs which the authors currently see and cite in existing educational systems. Each chapter concentrates on providing recommended instructional strategies and practical exercises for a specific target group: high school age adolescents. Contributors supply strategies in the different learning domains

including Cognitive, Psychomotor, Affect, and Interpersonal, and each individual is responsible for training teachers, developing and/or evaluating curricula for such training, and educating high school students through the development and implementation of curricula. Developed for both new and experienced teachers developing curricula for high-school adolescents, the goal of the Workbook Companion is to provide those in the field of education with strategies to incorporate each of the four domains into their lesson plans, regardless of subject area. Praise for From Principles of Learning to Strategies for Instruction with Workbook Companion "In 20+ years of instructional design this book is the most comprehensive attempt to smoothly connect learning theory with practice advice and also provide clear examples of completed instruction that utilized both learning theory and best practice." "I think that this book would benefit nearly everyone interested in instructional design." - Richard Clark, Professor of Educational Psychology, Director, Center for Cognitive Technology, University of Southern California

Workbook in Introductory Economics

New products in principles of economics have been eager to address innovative ways of using technology to teach this introductory course. While these products are often accompanied by impressive digital resources, they all share one characteristic: they are still grounded in the traditional textbook format. In a new, “digital-first” approach for the principles of economics course, Roger Butters and Carlos Asarta offer the same core content covered in mainstream textbooks, but in a way that breaks free from the constraints of a traditional textbook’s structure and format, empowering instructors to take advantage of new approaches in teaching methodology to revitalize their courses. The authors present over 200 distinct concepts in the principles course, each anchored by an engaging 2-4 minute high-quality video, and accompanied by a suite of learning resources such as dynamic applications, worked examples, and assessment tools. With a concept-level approach, instructors are able to handpick every aspect of the curriculum, from concepts covered to sequencing, providing flexibility for instructors to tailor their courses in such a way that is appropriate for any school, at any level, and set to any depth. Instead of a class that revolves around static pages and chapters of a textbook, Roger Butters and Carlos Asarta envision a learning environment that revolves around the talents and abilities of the teacher in the classroom. The result is an experience that is motivating, accessible, and adaptable to how today’s students learn and obtain information.
