Energy Efficiency Solutions for Historic Buildings

Maryland Technology Resource Guide

Ward's now lists more than 112,000 companies, 90% of which are private. Volumes 1, 2 and 3 provide current company information in a single A-Z arrangement. Volume 4 is a geographic company listing, offering at-a-glance evaluations of industry activity through rankings and analysis. Consult Volume 5 for national rankings by sales within SIC codes at the 4-digit level; Volume 8 presents these rankings by NAICS codes. Volumes 6 and 7 rank companies in each state by sales within 4-digit SIC codes and provide brief evaluations of industry activity of leading companies for each state. Also available on CD-ROM and on GDL.

Dr. Dobb's Journal of Software Tools for the Professional Programmer

Domain decomposition is an active, interdisciplinary research area that is devoted

to the development, analysis and implementation of coupling and decoupling strategies in mathematics, computational science, engineering and industry. A series of international conferences starting in 1987 set the stage for the presentation of many meanwhile classical results on substructuring, block iterative methods, parallel and distributed high performance computing etc. This volume contains a selection from the papers presented at the 15th International Domain Decomposition Conference held in Berlin, Germany, July 17-25, 2003 by the world's leading experts in the field. Its special focus has been on numerical analysis, computational issues,complex heterogeneous problems, industrial problems, and software development.

Noise Control, Reduction and Cancellation Solutions in Engineering

This handbook holistically summarises the principles for the energy retrofitting of historic buildings, from the first diagnosis to the adequately designed intervention: preservation of the historic structure, user comfort, and energy efficiency. The content was developed by an interdisciplinary team of researchers. The wide range of different expertise, design examples, calculations, and measuring results from eight case studies makes this manual an indispensable tool for all architects, engineers, and energy consultants.

Technology in Supply Chain Management and Logistics

Who Owns Whom

From the winners of the 2017 Pulitzer Prize for Explanatory Reporting 11.5 million documents sent through encrypted channels. The secret records of 214,000 offshore companies. The largest data leak in history. In early 2015, an anonymous whistle-blower led investigative journalists Bastian Obermayer and Frederik Obermaier into the shadow economy where the super-rich hide billions of dollars in complex financial networks. Thus began the ground-breaking investigation that saw an international team of 400 journalists work in secret for a year to uncover cases involving heads of state, politicians, businessmen, big banks, the mafia, diamond miners, art dealers and celebrities. A real-life thriller, The Panama Papers is the gripping account of how the story of the century was exposed to the world.

A-Z guide to soil/plant/microbe-based wastewater treatment Engineers and planners eager to benefit from the cost efficiencies and convenience of land treatment of waste will find practical guidelines in this comprehensive manual. It

covers soil hydraulics, vegetation selection, site selection, field investigations, preapplication treatment and storage, and transmission and distribution of wastewater. You're introduced to: Design procedures and appropriate uses for each of the three land treatment processes: soils, plants, and microbiological agents Special attributes of food processing wastewater, with 6 case studies The use of biosolids produced by mechanical treatment systems as crop nutrients Options for preapplication treatment, including ponds and constructed wetlands Much more

Crossing Solutions at Roundabouts and Channelized Turn Lanes for Pedestrians with Vision Disabilities

"How can you take the fear of death and turn it into something profound, something positive? What is the alchemy that allows someone who is in a metaphorical desert to turn around and see a flower?"—Tina L. Staley "Death—the last sleep? No, it is the final awakening."—Sir Walter Scott Most of us try to avoid thinking about death until the moment we come face-to-face with it. But when we have the courage to accept our inevitable mortality—and even to contemplate it actively, as a spiritual practice—we open the door to living fully, joyfully, and in complete presence. Living Fully, Dying Well is an investigation into the challenge each of us faces—to embrace all of life, from the beginning to the end. When death approaches, many of us undergo a profound transformation—we let go of old distractions and focus with new clarity on what gives our life meaning. Yet we can invite these profound "deathbed revelations" at any point in our lives by engaging in an honest inquiry into our own mortality. Living Fully, Dying Well provides a doorway to begin your own exploration of the mysteries of death—from the cultural myths about dying, to the personal fears we all share, to the question of what becomes of us beyond this life. Living Fully, Dying Well unfolds as a dialogue between spiritual leaders and medical healers, each of whom brings their own unique perspective to the universal human experience of death. These luminaries offer their stories, their insights, and their most valuable practices, all to transform death from a source of fear to an opportunity to reveal the true richness of your life. Living Fully, Dying Well has received the following awards: 2010 Gold Independent Publishers Award (IPPY)—Aging/Death & Dying 2010 Gold Nautilus Award—Grieving/Death & Dying 2010 Gold Living Now Award—Grieving/Death & Dying

Blaze Your Own Trail

Habits That Heal

This book explains how to see one's own network through the eyes of an attacker, to understand their techniques and effectively protect against them. Through Python code samples the reader learns to code tools on subjects such as password sniffing, ARP poisoning, DNS spoofing, SQL injection, Google harvesting and Wifi hacking. Furthermore the reader will be introduced to defense methods such as intrusion detection and prevention systems and log file analysis by diving into code.

ISIS: International Symposium on Interdisciplinary Science

When she turned thirty years old, but felt more like she was turning fifty, Linda Barney realized that years of self-hatred, running on stress, and putting her own needs last had made her body sick. Through study, as well as trial and error, she discovered some simple daily habits that dramatically improved her health and that of her family. She began to share what she was learning with others and the rest, as they say, is history. Habits That Heal offers simple solutions, easy-to-implement advice, and inspired affirmations to help you reach your wellness goals. Inside you'll learn: • Why loving your body is crucial to your health • The benefits of practicing gratitude • How to listen to the wisdom of your body • Ways to release anxiety, stress, and worry • Appreciation for the beautiful imperfection of life Part memoir, part workbook, Habits That Heal will show you how to unleash

your body's natural capacity for energy, balance, and joy.

Legislative Proposals to Protect Children from Inappropriate Materials on the Internet

The International Symposium on Interdisciplinary Science (ISIS) hosted some of the world's most renowned researchers in physics, life science, and chemistry to discuss the interdisciplinary approaches to complex scientific phenomenon. The collection is a diverse cross-section of ongoing research on cell motility, nonlinear waves, theoretical physics and biochemical complexity.

Technology in Supply Chain Management and Logistics: Current Practice and Future Applications analyzes the implications of these technologies in a variety of supply chain settings, including block chain, Internet of Things (IoT), inventory optimization, and medical supply chain. This book outlines how technologies are being utilized for product planning, materials management and inventory, transportation and distribution, workflow, maintenance, the environment, and in health and safety. Readers will gain a better understanding of the implications of these technologies with respect to value creation, operational effectiveness, investment level, technical migration and general industry acceptance. In addition, the book features case studies, providing a real-world look at supply chain technology implementations, their necessary training requirements, and how these new technologies integrate with existing business technologies. Identifies emerging supply chain technologies and trends in technology acceptance and utilization levels across various industry sectors Assists professionals with technology investment decisions, procurement, best values, and how they can be utilized for logistics operations Features videos showing technology application, including optimization software, cloud computing, mobility, 3D printing, autonomous vehicles, drones and machine learning

The Gold Book Twin Cities

Noise has various effects on comfort, performance, and human health. For this reason, noise control plays an increasingly central role in the development of modern industrial and engineering applications. Nowadays, the noise control problem excites and attracts the attention of a great number of scientists in different disciplines. Indeed, noise control has a wide variety of applications in manufacturing, industrial operations, and consumer products. The main purpose of this book, organized in 13 chapters, is to present a comprehensive overview of recent advances in noise control and its applications in different research fields. The authors provide a range of practical applications of current and past noise control strategies in different real engineering problems. It is well addressed to researchers and engineers who have specific knowledge in acoustic problems. I would like to thank all the authors who accepted my invitation and agreed to share their work and experiences.

Internet Industry Almanac

The present research paper investigates beneficial applications of digital and non-digital medical devices, software and add-on services for the configuration of human-centered health services for pharmacies and patients from rural and medically underserved areas in Kenya. The case study carried out in cooperation with Merck KGaA and its CURAFATM points of care - a social business - is based on extensive field research and relies on the innovation method Design Thinking. The field research comprises 63 qualitative and quantitative local stakeholders interviews and takes into account the observations and insights of two field trips in November 2018 and February 2019 to Kenya. Within the scope of the study, the author develops a long-term strategy for the integration of digital and non-digital services bundles at CURAFATM points of care as well as for its patient management system CURASYZ and then configures a business-to-business and a business-to-consumer subscription service that deal with the treatment of hypertension and diabetes patients. The central basis for the service configuration is the model "The Six Degrees of Excellence" developed by the author for the treatment of NCD patients. Both the design and the business models of the two services CURAFATM+ for Pharmacies and CURAFATM+ are a novelty for the Kenyan healthcare market. The built prototypes of the services were extensively tested with the relevant user groups. The fact that 79% of the test subjects for the B2B solution and 100% of the test subject for the B2C service were willing to directly subscribe to the service is a strong proof for the effectiveness and possible impactful deployment of digitally enabled healthcare solutions. It furthermore indicates substantial growth opportunities for CURAFATM and other organisations active in the primary health-care market in developing countries.

Moody's OTC Unlisted Manual

So many women enter their adult lives believing that they should know where they are going and how to get there. This can make life decisions feel intimidating and overwhelming. While some choices that lie ahead are fairly predictable, such as those surrounding career, partnership, and motherhood, the effects of these choices can lead to more complicated and unexpected turns that are seldom discussed. Rather than suggesting a rule book, Rebekah Bastian, vice president at Zillow and recognized thought leader, inspires you to Blaze Your Own Trail. "I have the benefit of being a living example of crooked paths, magnificent screw-ups, and shocking successes," she writes. Through storylines and supportive data that explore workplace sexism, career changes, marriage, child-rearing, existential crises, and everything in between, you will learn to embrace and feel less alone in your own nonlinear journey. Even better, you can turn back decisions and make different ones. Blaze Your Own Trail includes nineteen possible outcomes and many routes to get there. You will find that you have the strength to make it through any of them.

Genetic Engineering & Biotechnology News

Apply engineering and design principles to revitalize the healthcare delivery system Healthcare Systems Engineering is the first engineering book to cover this emerging field, offering comprehensive coverage of the healthcare system, healthcare delivery, and healthcare systems modeling. Written by leading industrial engineering authorities and a medical doctor specializing in healthcare delivery systems, this book provides a well-rounded resource for readers of a variety of backgrounds. Examples, case studies, and thoughtful learning activities are used to thoroughly explain the concepts presented, including healthcare systems, delivery, quantification, and design. You'll learn how to approach the healthcare industry as a complex system, and apply relevant design and engineering principles and processes to advance improvements. Written with an eye toward practicality, this book is designed to maximize your understanding and help you quickly apply toward solutions for a variety of healthcare challenges. Healthcare systems engineering is a new and complex interdisciplinary field that has emerged to address the myriad challenges facing the healthcare industry in the wake of reform. This book functions as both an introduction and a reference, giving you the knowledge you need to move toward better healthcare delivery. Understand the healthcare delivery context Use appropriate statistical and quantitative models Improve existing systems and design new ones Apply systems engineering to a variety of healthcare contexts Healthcare systems engineering overlaps with industrial engineering, operations research, and management science, uniting the principles and practices of these fields together in pursuit of optimal healthcare operations. Although collaboration is focused on practitioners, professionals in information technology, policy and administration, public health, and law all play crucial roles in revamping health care systems. Healthcare Systems Engineering is a complete and authoritative reference for stakeholders in any field.

A practical guide to tapping into the abundant ideas andtalent outside your organization Successful organizations are constantly searching for newideas. Historically, organizations have looked to theiremployees and select partners. They have used techniques likebrainstorming to gather and evaluate ideas. However, intoday's market, talent and new ideas can be foundeverywhere. The Internet has enabled organizations to greatly expand theirsearches far beyond their four walls. Instead of ten or onehundred people, organizations from startups to Fortunate 500 firmscan work with thousands or tens of thousands to discover and assessmany, many more ideas (as well as prototypes, partners andpeople). We call this Crowdstorming. But how do you organize so many people and ideas to get the bestresults? Our goal is to help our readers make Crowdstorming work; to helpmore organizations engage with people far beyond theirorganizational

borders, to find better ideas, solutions, talent andpartners so we can address some of our most challenging problems --not just for the sake of business, but for our society,too. Shaun Abrahamson has spent more than a decade as an early stageinvestor and advisor partnering with leading startups and globalorganizations to identify, create and launch new businesses enabledby newly possible relationships with customers and experts. Peter Ryder is the former President of jovoto and has broadexperience as a consultant helping organizations improve theirbusiness through the use of new technologies. Bastian Unterberg is the founder and CEO of jovoto, a Berlinand NYC based firms that organizes a 40,000 person strong creativecommunity to work with global brands on problems ranging from newproduct design to sustainable architecture.
