Mankiw's Principles of Economics textbooks continue to be the most popular and widely used text in the economics classroom. BRIEF PRINCIPLES OF MACROECONOMICS, 4th Edition features a strong revision of content in all 18 chapters while maintaining the clear and accessible writing style that is the hallmark of the highly respected author. The 4th edition also features an expanded instructor's resource package designed to assist instructors in course planning and classroom presentation and full integration of content with Aplia, the leading online Economics education program. In the 4th edition Greg Mankiw has created a full educational program for students and instructors -- Experience Mankiw 4th edition. I have tried to put myself in the position of someone seeing economics for the first time. My goal is to emphasize the material that students should and do find interesting about the study of the economy. - N. Gregory Mankiw. Gene Control offers a current description of how gene expression is controlled in eukaryotes, reviewing and summarizing the extensive primary literature into an easily accessible format. Gene Control is a comprehensively restructured and expanded edition of Latchman's Gene Regulation: A Eukaryotic Perspective, Fifth Edition. The first part of the book deals

with the fundamental processes of gene control at the levels of chromatin structure, transcription, and post-transcriptional processes. Three pairs of chapters deal with each of these aspects, first describing the basic process itself, followed by the manner in which it is involved in controlling gene expression. The second part of the book deals with the role of gene control in specific biological processes. Certain chapters deal with the importance of gene control in cellular signaling processes and for normal development of the embryo. Another chapter discusses the key roles played by gene-regulatory processes in the specification of differentiated cell types such as muscle cells and neurons. The final chapters discuss the consequences of errors in gene control; the relationship between gene misregulation and human diseases, especially cancer; and potential therapies designed specifically to target particular levels of gene control. Gene Control will be of value to students in biological sciences, as well as to scientists and clinicians interested in how genes are regulated in health and disease.

Perception and Its Objects

Bill Brewer presents, motivates, and defends a bold new solution to a fundamental problem in the philosophy of perception. What is the correct theoretical conception of perceptual experience, and how should we best understand the most fundamental nature of our perceptual relation with the physical objects in the world around us? Most theorists today analyse perception in terms of its representational content, in large part in order to avoid fatal problems attending the early modern conception of perception as a relation with particular mind-dependent objects of experience. Having set up the underlying problem and explored the lessons to be learnt from the various difficulties faced by opposing early modern responses to it, Bill Brewer argues that this contemporary approach has serious problems of its own. Furthermore, the early modern insight that perception is most fundamentally to be construed as a relation of conscious acquaintance with certain direct objects of experience is, he claims, perfectly consistent with the commonsense identification of such direct objects with persisting mind-independent physical objects themselves. Brewer here provides a critical, historical account of the

philosophy of perception, in order to present a defensible vindication of empirical realism.

Delta Scout was the call sign for Tony Trethowan's Ground Coverage 'stick' during the Rhodesian bush war of the late seventies. This is the story of an ordinary policeman, a young man who signed up with the British South Africa Police as a raw 18 year old and who was to serve eight years with that fine force. As a young Patrol Officer, he was to experience rural life in remote stations in the bush of Matabeleland. He embraced the experience and learned Sindebele within a few months. The book is richly interspersed with anecdotes of wild frontier life -- of rowdy prospectors, obstreperous farmers, maverick hunters and bizarre eccentrics. He deals with a wide array of crimes and incidents -- from murder, tribal suicide, sorcery, robbery and drunkenness to horrific vehicle accidents. But as the bush war intensifies, Tony finds himself more and more involved in paramilitary operations. Ground Coverage was a BSAP intelligence-gathering unit -- operating literally 'on the ground' in the rural areas. Known by his enemy, Nkomo's ZIPRA guerrillas, as Baleka, or 'he who runs hither and thither' because of his propensity for rapidly covering vast areas, alone in his beaten-up police Land Rover, the second part of the book deals with the author's conversion from civilian policeman to full-blooded counter-insurgency operator in an African guerrilla war. Told with a sensitivity and pathos that is rare in military memoirs, Delta Scout is a brutally honest, compelling account of innocence lost.

Get to grips with a new technology, understand what it is and what it can do for you, and then get to work with the most important features and tasks. A concise guide written in an easy-to-follow format following the Starter guide approach. This book is for people who have not used Spring Security before and want to learn how to use it effectively in a short amount of time. It is assumed that readers know both Java and HTTP protocol at the level of basic web programming. The reader should also be familiar with Inversion-of-Control/Dependency Injection, preferably with the Spring framework itsel.

Human Intimacy: Marriage, the Family, and Its Meaning, Research Update

The theoretical underpinnings of computing form a standard part of almost every computer science curriculum. But the classic treatment of this material isolates it from the myriad ways in which the theory influences the design of modern hardware and software systems. The goal of this book is to change that. The book is organized into a core set of chapters (that cover the standard material suggested by the title), followed by a set of appendix chapters that highlight application areas including programming language design, compilers, software verification, networks, security, natural language

processing, artificial intelligence, game playing, and computational biology. The core material includes discussions of finite state machines, Markov models, hidden Markov models (HMMs), regular expressions, context-free grammars, pushdown automata, Chomsky and Greibach normal forms, context-free parsing, pumping theorems for regular and context-free languages, closure theorems and decision procedures for regular and context-free languages, Turing machines, nondeterminism, decidability and undecidability, the Church-Turing thesis, reduction proofs, Post Correspondence problem, tiling problems, the undecidability of first-order logic, asymptotic dominance, time and space complexity, the Cook-Levin theorem, NP-completeness, Savitch's Theorem, time and space hierarchy theorems, randomized algorithms and heuristic search. Throughout the discussion of these topics there are pointers into the application chapters. So, for example, the chapter that describes reduction proofs of undecidability has a link to the security chapter, which shows a reduction proof of the undecidability of the safety of a simple protection framework.

What is politics? Is it a universal feature of all human societies, past and present? Is it tied to specific institutional arenas? Or is it found in all groups and organizations, large or small, formal or informal? This new textbook seeks to provide answers to these important questions. Starting with what it means to 'think politically', the book goes on to explore a wide range of meanings attributed to the concept of politics from a variety of perspectives and theoretical traditions. It offers succinct and coherent overviews by some of the foremost scholars in the field, and each invites the reader to see the activity of politics in a distinctive way. Topics covered include politics as a form of rule, feminist approaches to politics, Marxism and politics, the politics of human behaviour, environmental politics, politics as collective choice, and Islam and politics. Written with the new student in mind, this concise introduction to the study and activity of politics is essential reading for all those coming to the discipline for the first time.

Microsoft's new .NET version of Visual Basic is its most radical revamping of the product since it was first released. Even if you know your way around VB6, the latest version presents special challenges. There are some new ways of doing things, some new things to do, and a new environment in which to work. With a few tips and tricks from expert Matt Tagliaferri, however, you'll be well on your way to VB.NET mastery. Visual Basic .NET Codemaster's Library offers a collection of 99 clear, concise programming examples, which show you how to use VB.NET and Visual Studio .NET to make the most of functionality available for the first time in the .NET Framework. You can begin with any topic and read only the ones that matter to you. Each topic provides a solution that you can incorporate into your own work, in areas ranging from garbage collection to database transactions, from memory management to XML Web Services. You even get coverage of mixing C# and VB.NET in the same application. Taken together, the tips in this book help you make the transition to thinking and working effectively within the object-oriented world of .NET.

The VitalBook e-book version of Genomes 3 is only available in the US and Canada at the present time. To purchase or rent please visit http://store.vitalsource.com/show/9780815341383 Covering molecular genetics from the basics through to genome expression and molecular phylogenetics, Genomes 3is the latest edition of this pioneering textbook. Updated to incorporate the recent major advances, Genomes 3 is an invaluable companion for any undergraduate throughout their studies in molecular genetics. Genomes 3 builds on the achievements of the previous two editions by putting genomes, rather than genes, at the centre of molecular genetics teaching. Recognizing that molecular biology research was being driven more by genome sequencing and functional analysis than by research into genes, this approach has gathered momentum in recent years.

This book captures the physical, cognitive, social, and personal development of individuals from childhood through adulthood while continuously placing theory and research in the context of how they can be applied to readers' lives. Designed to capture the physical, cognitive, social, and personality development as individuals move from childhood into adulthood, Adolescence 1e provides an accurate, broad, and comprehensive introduction to the field of adolescent development. More importantly, however, it places these theories and research findings in the context of how they can be applied to readers' lives. The book is intended to excite readers about the field of adolescence, draw them into its way of looking at the world, and to shape their understanding of the significant developmental issues that characterize this period. By presenting the useful, practical information that will help readers make life decisions about relationships, education, and careers--the very stuff of adolescence--the book is intended to keep enthusiasm about the discipline alive long after students' formal introduction to the field has ended. The Six Sigma Project Planner

Without the close, there is no sale. Pretty obvious, right? Yet, for many salespeople, closing is the most baffling and elusive part of the selling process. All too often, salespeople meet qualified clients and charm them with an eloquent presentation, only to see the sale mysteriously slip from between their fingers in the end. Which is sad when you consider all the hard work – the prospecting, preparation, planning, and practice – done for the sake of a moment of truth that never arrives. Fortunately, closing is an art that can be mastered, and now Sales Closing For Dummies shows you how. Packed with powerful principles that can help you become a top-producing salesperson, Sales Closing For Dummies is the ultimate guide to mastering that most mysterious part of the selling equation. Tom Hopkins, the legendary sales genius who, by age 30 was the nation's leading real-estate trainer, demystifies closing and shows what it takes to be a champion closer, including how to: Lead a sale without being pushy Read the signs of an interested potential buyer Use questioning methods that close sales, time and again Help clients feel good about their buying decisions Keep your clients' business and build their loyalty Build long-term relationships and watch your sales grow With the help of dozens of real-life examples from a wide cross section of industries, Tom shows why professional selling is about communication, not coercion. And he shares his considerable insight and experience on: Verbal and visual buying cues and how to recognize them Choosing the best

location for closing Addressing concerns and creating a sense of urgency Time-tested tactics and strategies for ending customer procrastination, overcoming their fear, closing from a distance, and more The ten biggest closing mistakes and how to avoid them Add-on selling and other ways of getting your clients to help you to build your business Featuring Tom's Hopkins' trademark "Red Flag" key points and situation scripts, this fun, easy-to-understand guide arms you with the hands-on tools and techniques you'll need to become a world-class closer.

A Comprehensive Guide for M.C.A. Entrance Examination

In this book, philosopher Keekok Lee challenges one of the central assumptions of contemporary environmentalism: that if we could reduce or eliminate pollution we could 'save' the planet without unduly disrupting our modern, industrialized societies. Lee argues instead that the process of modernization, with its attendant emphasis on technological innovation, has fundamentally transformed 'nature' into just another manmade 'artefact.' Ultimately, what needs to be determined is if nature has value above and beyond human considerations, whether aesthetic, spiritual, or biological. This provocative book attempts to reconfigure environmental ethics, positing the existence of two separate ontological categories--the 'natural' and the 'artefactual.' Natural entities, be they organisms or inert matter, are 'morally considerable' because they possess the ontological value of independence, whereas artefacts are created by humans expressly to serve their own interests and ends.
