A compiler translates a program written in a high level language into a program written in a lower level language. For students of computer science, building a compiler from scratch is a rite of passage: a challenging and fun project that offers insight into many different aspects of computer science, some deeply theoretical, and others highly practical. This book offers a one semester introduction into compiler construction, enabling the reader to build a simple compiler that accepts a C-like language and translates it into working X86 or ARM assembly language. It is most suitable for undergraduate students who have some experience programming in C, and have taken courses in data structures and computer architecture.

There is a lot more to photography than simply picking up a camera, pointing it toward something, and tripping the shutter. Achieving a great photograph requires thought and preparation, an understanding of the photographic process, and a firm grasp of how light and composition affect a photo. There must be personal involvement and personal expression. There must be experimentation, with the recognition that only a small percentage of experiments end successfully. In this book, best-selling author and world-renowned photographer and teacher Bruce Barnbaum explores these seldom-discussed issues by drawing upon his personal experiences and observations from more than 40 years of photographing and teaching. In addition to photographs, Bruce also uses painting, music, and writing, as well as the sciences and even business, to provide pertinent examples of creative thinking. These examples serve as stepping-stones that will lead you to your own heightened ability to see and be creative. Creativity is a topic that is almost wholly ignored in formal education because most instructors think that it cannot be taught or learned. To the contrary, Bruce has proven that photographic seeing and creativity can be taught, learned, and improved. This book expands on the ideas that are central to Bruce's method of teaching photography, which he has used in workshops for the past 41 years. Included in the book are in-depth discussions on the following topics: Defining your own unique rhythm and approach as a photographer How to translate the scene in front of you to the final photograph The differences and similarities between how an amateur and a professional approach photography The differences between realism and abstraction, and the possibilities and limitations of each Learning to expand your own seeing and creativity through classes, workshops, and associating with other photographers Why the rules of composition should be ignored How to follow your passion When to listen to the critics and when to ignore them The book is richly illustrated with over 90 photographs taken by Bruce as well as other photographers. Seeing and creativity are difficult to teach, but not impossible. This very different, perhaps groundbreaking book is sure to inspire photographers of all skill levels-from beginners to seasoned professionals-to think deeply about the issues involved in creating successful photographs.

These notes are intended to help undergraduates who need to understand something of behavior both for its intrinsic interest and for their future careers in medicine, biology, psychology, anthropology, veterinary medicine, and nursing. In Emory University's Biology Department, a single-semester course called Evolutionary Perspectives on Behavior is given to undergraduates. It amounts to four, not eight months of study, so a great deal of compression is essential. There are several excellent textbooks available that deal with behavioral science from different perspectives, but we have found them too compendious for use in a short course when students are so heavily burdened; it is unsatisfactory to direct them to a chapter here and there in several different books or to this or that review article and original paper. In this volume, we have tried effectively and inexpensively to put in one place what we know is needed. The topics we have selected deal with their subjects in a simple, straightforward way without being too superficial. We could not cover everything and the gaps are not entirely idiosyncratic but reflect what students are given very well in other courses. Thus, there is no mention of the physiology of the axon and synapse; learning, memory, cognition, and basic genetics are hardly touched upon because students know about these matters from elsewhere.

When it comes to photography, it's all about the light. After spending more than thirty years behind the lens—working for National Geographic, Time, Life, and Sports Illustrated—Joe McNally knows about light. He knows how to talk about it, shape it, color it, control it, and direct it. Most importantly, he knows how to create it using small hot shoe flashes. In *The Hot Shoe Diaries*, Joe brings you behind the scenes to candidly share his lighting solutions for a ton of great images. Using Nikon Speedlights, Joe lets you in on his uncensored thought process—often funny, sometimes serious, always fascinating—to demonstrate how he makes his pictures with these small flashes. Whether he's photographing a gymnast on the Great Wall, an alligator in a swamp, or a fire truck careening through Times Square, Joe uses these flashes to create great light that makes his pictures sing.

A PASSIONATE, AFFECTIONATE RECORD OF ADVENTURES AND MISADVENTURES IN THE WORLD'S HOTTEST METROPOLIS Tourists come to Bangkok for many reasons—a sex change operation, a night with two prostitutes dressed as nuns, a stay in a luxury hotel. Lawrence Osborne comes for the cheap dentistry. Broke (but no longer in pain), he finds that he can live in Bangkok on a few dollars a day. And so the restless exile stays. Osborne's is a visceral experience of Bangkok, whether he's wandering the canals that fill the old city; dining at the No Hands Restaurant, where his waitress feeds him like a baby; or launching his own notably unsuccessful career as a gigolo. A guide without inhibitions, Osborne takes us to a feverish place where a strange blend of ancient Buddhist practice and new sexual mores has created a version of modernity only superficially indebted to the West. Bangkok Days is a love letter to the city that revived Osborne's faith in adventure

and the world.

Plainchant is the oldest substantial body of music that has been preserved in any shape or form. It was first written down in Western Europe in the wake of the Carolingian renaissance of the 8th and 9th centuries. Many thousands of chants have been sung at different times or places in a multitude of forms and styles, responding to the differing needs of the church through the ages. This book provides a clear and concise introduction, designed both for those to whom the subject is new and those who require a reference work for advanced studies. It begins with an explanation of the liturgies which plainchant was designed to serve. All the chief genres of chant, different types of liturgical book, and plainchant

notations are described. The later chapters are complemented by plates, with commentary and transcriptions. After an exposition of early medieval theoretical writing on plainchant, a historical survey follows the constantly changing nature of the repertory through from the earliest times to the restoration of medieval chant a century ago. The historical relations between Gregorian, Old-Roman, Milanese, Spanish, and other repertories is considered. Important musicians and centre of composition are discussed, together with the establishment of Gregorian chant in all the lands of medieval Europe, and the reformations and revisions carried out by the religious orders and the humanists. Copiously illustrated with over 200 musical examples transcribed from original sources, the book highlights the diversity of practice and richness of the chant repertory characteristic of the Middle Ages. As both a self-contained summary and also, with its many pointers to further reading, a handbook for research, it will become an indispensable reference book on this vast subject.

The Kingdom is Clive Cussler's third Fargo Adventure. Whether it's lost treasure or missing persons, the Fargos find themselves in a heap of trouble every time . . . When Texas oil baron Charlie King contacts Sam and Remi Fargo he has an unusual request. He hired an investigator - and good friend of the pair - to locate his missing father in the Far East. But now the investigator has vanished. Would Sam and Remi be willing to look for them both? Though something about the request doesn't quite add up, Sam and Remi agree to help out. It's a journey that takes the Fargos to Tibet, Nepal, Bulgaria, India, and China. They get mixed up with black-market fossils, a centuries-old puzzle chest, the ancient Nepali kingdom of Mustang, a balloon aircraft from a century before its time . . . and an extraordinary skeleton that might turn the history of human evolution on its head. Oh, and not a few unfriendly people with guns and itchy trigger fingers . . . Clive Cussler, author of the celebrated Dirk Pitt novels *Treasure of Khan* and *Valhalla Rising*, presents the third novel in his newest series, following the adventures of treasure hunters Sam and Remi Fargo. It's the latest and hottest technique, made possible only through digital. High Dynamic Range photography is the process of taking several pictures of a scene at various exposures, then merging them into one file. So the entire photo can look crisp and detailed, from highlights to midtones to shadows--and photographers needn't sacrifice any part of their image. And the best way to master this exciting technology is with this thorough, easy-to-follow, and visually spectacular guide. No other title does justice to these cutting-edge techniques, which actually take the viewer into worlds far beyond normal photography--sometimes even beyond normal human perception. Ferrell McCollough, a widely respected photographer, pushes the boundaries and inspires others to pursue their artistic vision, too. The amazing results simply can't be achieved any other way.

As a high-performance compact digital camera the Coolpix P7700 allows users to enjoy full-scale photography similar to that possible with a digital-SLR camera. This latest flagship model in the Coolpix series features a large 1/1.7-in. Backside illumination 12MP CMOS sensor, a bright and fast Nikkor lens that supports 7.1x optical zoom and a fully articulated screen. Jon Sparks offers professional advice, hints and tips, on how to get the best from this lightweight, yet durable, magnesium-alloy framed compact. Although the lens, which offers an equivalent of 28-200mm in 35-mm format terms, is capable of going down to f/2.0 at the widest angle, rising to f/4.0 at the top end may not compare particularly well to some other premium compacts recently released on the market it has a longer zoom capability than most, so it offers greater flexibility in that respect. Offering smooth operation and a simple design with intuitive positioning of operational dials and buttons the Coolpix P7700 gives the user the ability to shoot in RAW format, while full manual control is also available, as well as semi-automatic modes. It also supports macro photography from as close as two centimeters, as well as telephoto shooting. The bright, ultra high-resolution 3in. LCD monitor has a wide viewing angle that can be rotated to allow more convenient viewing when shooting from difficult angles. The 12.2MP backside illumination CMOS sensor enables better image quality at high sensitivities, and high-speed continuous shooting at approximately 8 frames per second. The combination of fast-speed sensor with its full-HD 1080p video the Coolpix P7700 user can also enjoy superior picture quality movies as it is equipped with movie custom setting mode and allows manually specified shutter speed, aperture, and ISO sensitivity to achieve desired results. The built-in stereo microphone captures clear, natural audio—it even includes wind-noise reduction. A variety of ten special effects can also be applied to both still images or movies, including Cross Process, Zoom Exposure, and Defocus During Exposure.

Structure from Motion with Multi View Stereo provides hyperscale landform models using images acquired from standard compact cameras and a network of ground control points. The technique is not limited in temporal frequency and can provide point cloud data comparable in density and accuracy to those generated by terrestrial and airborne laser scanning at a fraction of the cost. It therefore offers exciting opportunities to characterise surface topography in unprecedented detail and, with multi-temporal data, to detect elevation, position and volumetric changes that are symptomatic of earth surface processes. This book firstly places Structure from Motion in the context of other digital surveying methods and details the Structure from Motion workflow including available software packages and assessments of uncertainty and accuracy. It then critically reviews current usage of Structure from Motion in the geosciences, provides a synthesis of recent validation studies and looks to the future by highlighting opportunities arising from developments in allied disciplines. This book will appeal to academics, students and industry professionals because it balances technical knowledge of the Structure from Motion workflow with practical guidelines for image acquisition, image processing and data quality assessment and includes case studies that have been contributed by experts from around the world.

The Afghan people are standing at a crucial crossroads in history. Can their fragile democratic institutions survive the drawdown of US military support? Will Afghan women and girls be stripped of their modest gains in freedom and opportunity as the West loses interest in their plight? While the media have largely moved on from these stories, Paula Bronstein remains passionately committed to bearing witness to the lives of the Afghan people. In this powerful photo essay, she goes beyond war coverage to reveal the full complexity of daily life in what may be the world's most reported on yet least known country. Afghanistan: Between Hope and Fear presents a photographic portrait of this war-torn country's people across more than a decade. With empathy born of the challenges of being an American female photojournalist working in a conservative Islamic country, Bronstein gives voice to those Afghans, particularly women and children, rendered silent during the violent Taliban regime. She documents everything from the grave trials facing the country—human rights abuses against women, poverty and the aftermath of war, and heroin addiction, among them—to the stirrings of new hope, including elections, girls' education, and work and recreation. Fellow award-winning journalist Christina Lamb describes the gains that Afghan women have made since

the overthrow of the Taliban, as well as the daunting obstacles they still face. An eloquent portrait of everyday life, *Afghanistan: Between Hope and Fear* is the most complete visual narrative history of the country currently in print.

This book is aimed at chemistry teachers, teacher educators, chemistry education researchers, and all those who are interested in increasing the relevance of chemistry teaching and learning as well as students' perception of it. The book consists of 20 chapters. Each chapter focuses on a certain issue related to the relevance of chemistry education. These chapters are based on a recently suggested model of the relevance of science education, encompassing individual, societal, and vocational relevance, its present and future implications, as well as its intrinsic and extrinsic aspects. "Two highly distinguished chemical educators, Ingo Eilks and Avi Hofstein, have brought together 40 internationally renowned colleagues from 16 countries to offer an authoritative view of chemistry teaching today. Between them, the authors, in 20 chapters, give an exceptional description of the current state of chemical education and signpost the future in both research and in the classroom. There is special emphasis on the many attempts to enthuse students with an understanding of the central science, chemistry, which will be helped by having an appreciation of the role of the science in today's world. Themes which transcend all education such as collaborative work, communication skills, attitudes, inquiry learning and teaching, and problem solving are covered in detail and used in the context of teaching modern chemistry. The book is divided into four parts which describe the individual, the societal, the vocational and economic, and the non-formal dimensions and the editors bring all the disparate leads into a coherent narrative, that will be highly satisfying to experienced and new researchers and to teachers with the daunting task of teaching such an intellectually demanding subject. Just a brief glance at the index and the references will convince anyone interested in chemical education that this book is well worth studying; it is scholarly and readable and has tackled the most important issues in chemical education today and in the foreseeable future." - Professor David Waddington, Emeritus Professor in Chemistry Education, University of York, United Kingdom
