Skin Care in Radiation Oncology

Commemorating the 150th anniversary of one of the most beloved classics of children's literature, this illustrated edition presents Alice like you've never seen her before. In 1865, Charles Lutwidge Dodgson, an Oxford mathematician and Anglican deacon, published a story about a little girl who tumbles down a rabbit hole. Thus was the world first introduced to Alice and her pseudonymous creator, Lewis Carroll. This beautiful new edition of Alice's Adventures in Wonderland features rarely seen illustrations by Salvador Dalí that illuminate the surreal yet curiously logical and mathematical realm into which Alice famously falls. In an informative and wide-ranging introduction, Carroll expert Mark Burstein discusses Dalí's connections with Carroll, his treatment of the symbolic figure of Alice, and the mathematical nature of Wonderland. In addition, mathematician Thomas Banchoff reflects on the friendship he shared with Dalí and explores the mathematical undercurrents in Dalí's work.

This book serves as a practical guide for the prevention and treatment of radiation dermatitis. Skin toxicity caused by radiation treatment is common among cancer patients and minimizing the frequency and severity of these reactions improves quality of life and prevents interruptions that can compromise local-regional control. Each chapter is devoted to a specific disease site, such as the head and neck, breast, gastrointestinal, genitourinary, gynecologic, and central nervous system. Pediatric malignancies and wound care for locally advanced cancers are also discussed. For each topic, the range and frequency of the observed skin reactions, factors influencing these reactions, the typical course of each reaction and its resolution, and the interventions used are presented. This book provides evidence where it exists for the specific interventions and an extensive illustration program depicts the various reactions and their response to treatment protocols. Skin Care in Radiation Oncology: A Practical Guide presents a framework for patient care in an era of advancing technology and systemic and targeted therapies and is a valuable resource for radiation oncologists, dermatologists, and residents.

Filmosophy is a provocative new manifesto for a radically philosophical way of understanding cinema. It coalesces twentieth-century ideas of film as thought (from Hugo Münsterberg to Gilles Deleuze) into a practical theory of "film-thinking," arguing that film style conveys poetic ideas through a constant dramatic "intent" about the characters, spaces, and events of film. Discussing contemporary filmmakers such as Béla Tarr and the Dardenne brothers, this timely contribution to the study of film and philosophy will provoke debate among audiences and filmmakers alike.
