The Analysis of Directional Time Series: Applications to Wind Speed and Direction

Unesco Technical Papers in Marine Science

Yhteenveto: Järvien happamoituminen Suomessa : alueellinen vedenlaatu ja kriittinen kuormitus.

Proceedings

Headstart Science series consists of eight well-written textbooks for classes 1-8. The series, as the name suggests, aims to provide a head start to the learners for developing a scientific outlook. The books have been formulated as per

theContinuous and Comprehensive Evaluation (CCE) pattern of Central Board of Secondary Education (CBSE). The authors have put in their best efforts while writing the books keeping in mind the psychological requirements of the learners as well as the pedagogical aspirations of the teachers. The ebook version does not contain CD.

Targeting Mathematics series consists of nine textbooks; one for Primer and eight textbooks for classes 1-8. These books have been formulated strictly in accordance with the Continuous and Comprehensive Evaluation (CCE) approach of Central Board of Secondary Education (CBSE) and are based on the latest syllabus. The series also conforms to the guidelines of National Curriculum Framework 2005. The books have been written by experienced and renowned authors.

Australian Water Resources Council Technical Paper

Annual Index/Abstracts of Sae Technical Papers, 2002

Leading UK wetland scientists present a collection of reviews and case studies dealing with British freshwater wetlands and their hydrological, hydrochemical and consequent ecological processes. The hydrological section deals with a wide range of wetland types from groundwater-fed wetlands to acid mires, explaining how hydrological procedures have been modelled and investigated for diverse wetlands. The hydrochemical articles concentrate on the dynamics of nutrients as well as important implications for the management of river water quality, the use of artificial wetlands and restoration of disturbed wetlands. The final segment suggests future research directions and synthesizes the contributors' ideas.

Acidification of Lakes in Finland

All papers have been peer-reviewed. The conference brings together scientists and physicians from universities, national laboratories, research institutes and industry worldwide who use particle accelerators in their research, medical and industrial applications. The topics presented at the conference included accelerator technology and applications, atomic/nuclear physics, national and homeland security, ion beam analysis/modifications, medical applications/radioisotopes, radiation effects, teaching with accelerators, nano-scale fabrication, focused ion beams and PIXE.

Journal

Given a series of wind speeds and directions from the port of Fremantle the aim of this monograph is to detect general weather patterns and seasonal characteristics. To separate the daily land and sea breeze cycle and other short-term disturbances from the general wind, the series is divided into a daily and a longer term, synoptic component. The latter is related to the atmospheric pressure field, while the former is studied in order i) to isolate particular short-term events such as calms, storms and oscillating winds, and ii) to determine the land and sea breeze cycle which dominates the weather pattern for most of the year. All these patterns are described in detail and are related to the synoptic component of the data. Two time series models for directional data and a new measure of angular association are introduced to provide the basis for certain parts of the analysis.

Risø Report

Since the introduction of recombinant human growth hormone and insulin a quarter century ago, protein therapeutics has greatly broadened the horizon of health care. Many patients suffering with life-threatening diseases or chronic dysfunctions, which were medically untreatable not long ago, can attest to the wonder these drugs have achieved. Although the first generation of protein therapeutics was produced in recombinant *Escherichia coli*, most recent products use mammalian cells as production hosts. Not long after the first production of recombinant proteins in *E. coli*, it was realized that the complex tasks of most post-translational modifications on proteins could only be efficiently carried out in mammalian cells. In the 1990s, we witnessed a rapid expansion of mammalian-cell-derived protein therapeutics, chiefly antibodies. In fact, it has been nearly a decade since the market value of mammalian-cell-derived protein therapeutics surpassed that of those produced from *E. coli*. A common characteristic of recent antibody products is the relatively large dose required for effective therapy, demanding larger quantities for the treatment of a given disease. This, coupled with the broadening repertoire of protein drugs, has rapidly expanded the quantity needed for clinical applications. The increasing demand for protein therapeutics has not been met exclusively by construction of new manufacturing plants and increasing total volume capacity. More importantly the productivity of cell culture processes has been driven upward by an order of magnitude in the past decade.
