Principles of Economics in Context

Writing in the June 1965 issue of the *Economic Journal*, Harry G. Johnson begins with a sentence seemingly calibrated to the scale of the book he set himself to review: "The long-awaited monetary history of the United States by Friedman and Schwartz is in every sense of the term a monumental scholarly achievement--monumental in its sheer bulk, monumental in the definitiveness of its treatment of innumerable issues, large and small . . . monumental, above all, in the theoretical and statistical effort and ingenuity that have been brought to bear on the solution of complex and subtle economic issues." Friedman and Schwartz marshaled massive historical data and sharp analytics to support the claim that monetary policy--steady control of the money supply--matters profoundly in the management of the nation's economy, especially in navigating serious economic fluctuations. In their influential chapter 7, *The Great Contraction*--which Princeton published in 1965 as a separate paperback--they address the central economic event of the century, the Depression. According to Hugh Rockoff, writing in January 1965: "If Great Depressions could be prevented through timely actions by the monetary authority (or by a monetary rule), as Friedman and Schwartz had contended, then the case for market economies was measurably stronger." Milton Friedman won the Nobel Prize in Economics in 1976 for work related to *A Monetary History* as well as to his other Princeton University Press book, *A Theory of the Consumption Function* (1957).

Macroeconomics for Professionals

Now updated to include new chapters dedicated to the Global Economic Crisis. The

most exciting new text in a generation, Chad Jones's Macroeconomics will change the way intermediate macroeconomics courses are taught. It is the first and only undergraduate text to present the Romer model of Endogenous Technological Change, which is integral to the way economists study growth theory today. Other texts stop at the Solow model, an approach first formulated in the 1950s. Jones presents the Romer model at an appropriate level for undergraduates. The text is written in an engaging, conversational style that makes students feel as though they are sitting in on one of Professor Jones's lectures. When introducing new material, he presents it in a careful, patient manner and follows the discussion with case studies and worked examples. Each chapter includes two complete worked examples that walk students step-by-step through the material covered in that chapter. In addition, this is the first text in the intermediate macroeconomics market to be fully integrated with an online homework management system. The easy-to-use SmartWork homework management system offers extensive answer feedback as students work through a problem. [Click here to find out more](#)

Exploring Macroeconomics

"For the past two decades, Steven J. Davis, John C. Haltwanger, and Scott Schuh have studied the ebb and flow of jobs in U.S. manufacturing. Their surprising findings about where jobs are created and the frequency of job destruction have led to a body of journal articles and research by many other economists interested in the implications for modeling labor markets and comparisons to other industry and national settings. The authors now present this research in a single, up-to-date, and complete source with an explanation of their methods and a discussion of the usefulness of these concepts and measures for economic policy."--

The most powerful force in the world economy today is the redefinition of the relationship between state and marketplace - a process that goes by the name of privatization though this term is inadequate to express its far-reaching changes. We are moving from an era in which governments sought to seize and control the 'commanding heights' of the economy to an era in which the idea of free markets is capturing the commanding heights of world economic thinking. Basic views of how society ought to be organized are undergoing rapid change, trillions of dollars are changing hands and so is fundamental political power. Great new wealth is being created - as are huge opportunities and huge risks. Taking a worldwide perspective, including Britain, where the process began with Mrs Thatcher, Europe and the former USSR, China, Latin America and the US, THE COMMANDING HEIGHTS shows how a revolution in ideas is transforming the world economy - why it is happening, how it can go wrong and what it will mean for the global economy going into the twenty-first century.
