This comparative reader takes an anthropological approach to the study of religious beliefs, both strange and familiar. The engaging articles on all key issues related to the anthropology of religion grab the attention of students, while giving them an excellent foundation in contemporary ideas and approaches in the field. The multiple authors included in each chapter represent a range of interests, geographic foci, and ways of looking at each subject. Divided into 10 chapters, this book begins with a broad view of anthropological ways of looking at religion, and moves on to some of the core topics within the subject, such as myth, ritual, and the various types of religious specialists.

Recognized for accurate, relevant, and straightforward coverage, BUSINESS LAW AND THE REGULATION OF BUSINESS, 12E illustrates how legal concepts apply to common business situations. The book's comprehensive, yet succinct, approach provides a depth of coverage ideal for business success and CPA exam preparation without technical jargon. The text includes both landmark and recent cases with the facts and decision summarized for clarity, while the opinion is carefully edited to preserve the language of the court. More than 220 figures, tables, diagrams, concept reviews, and chapter summaries clarify concepts. All key legal terms are clearly defined and explained. In addition, each chapter is carefully organized with numerous illustrative hypothetical and case examples that relate content to real-life experiences. Numerous critical-thinking features further strengthen readers'

analytical skills. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Expanding the Boundaries of Transformative Learning

This book gathers inputs from a variety of researchers in the field of sustainable development in the widest sense across the UK, from business and economics, to arts and fashion, administration, environment and media studies. The book also describes research, curriculum innovation, and campus greening in a comprehensive way. Many universities in the United Kingdom are currently engaged in high-quality research on matters related to sustainable development. Yet there are relatively few publications that provide a multidisciplinary overview of these efforts and projects, and in which researchers from across the spectrum of the natural and social sciences have the opportunity to present their research methods, the results of their empirical research, or exchange ideas about on-going and future research initiatives focusing on sustainable development. Addressing this important gap in the literature, this book contributes to the further development of this rapidly growing field in the United Kingdom and beyond.

Annotation This important and original book is the first sustained analysis of the unique ways in which oral testimony of survivors contributes to our understanding

of the Holocaust. Langer argues that it is necessary to deromanticize the survival experience and that to burden it with accolades about the "indomitable human spirit" is to slight its painful complexity and ambivalence.

Principles of Epidemiology

Principles of Epidemiology: A Self-Teaching Guide consists of a series of problem-solving exercises designed to introduce and guide readers toward an understanding of the principles and methods of epidemiology, rather than the epidemiology of specific diseases or subject areas such as "infectious disease" or "chronic disease" epidemiology. The guide has been formulated to be used by itself or as a supplement to standard textbooks. It illustrates and illuminates the principles and concepts of epidemiology and provides the reader an opportunity to practice the application of these principles in a logical sequence. The guide is divided into 14 exercises. Each exercise will help readers to understand principles or methods used by epidemiologist. Topics covered include the patterns of disease, populations at risk and risk assessment, screening for disease, investigation of an epidemic, etiology of disease, principles of causation, study design in epidemiologic investigation, data interpretation, and the uses and applications of epidemiology.

Hornsgren's Accounting

One of the major challenges in the world is to provide clean water and sanitation for all. With 3% fresh water reserves in the earth, there are more than 1 billion people who still lack access to clean drinking water. The declining water quality has not only reduced the life expectancy of humans, but it has also contributed to the deleterious negative impacts on aquatic/marine life, flora, fauna and the ecosystem. However, with rapid technological advancements and the availability of advanced scientific instruments, there has been substantial improvement in the design and operation of water and wastewater treatment systems. Recently, these sustainable eco-technologies have been designed and operated to offer the following advantages: (i) a smaller footprint, (ii) less maintenance, (iii) >99% removal of contaminants, (iv) provides the option for resource recovery, (v) less energy consumption, (vi) minimal use of chemicals, and (vii) less investment and operational costs. This book highlights the technologies used for the removal of pollutants such as dyes, uranium, cyanotoxins, faecal contamination and P/N compounds from water environments, and shows that ecotechnologies are becoming more and more important and playing critical role in removing a wide variety of organic and inorganic pollutants from water. In Focus - a book series that showcases the latest accomplishments in water research. Each book focuses on a specialist area with papers from top experts in the field. It aims to be a vehicle for in-depth understanding and inspire further conversations in the sector.

Holocaust Testimonies

Transformative learning involves experiencing a deep, structural shift in the basic premises of thought, feelings, and actions. It is a shift of consciousness that dramatically and permanently alters our way of being in the world. Such a shift involves our understanding of ourselves and our self-locations; our relationships with other humans and with the natural world; our understanding of relations of power in interlocking structures of class, race and gender; our body awarenesses; our visions of alternative approaches to living; and our sense of possibilities for social justice and peace and personal joy. The editors of this collection make several challenges to the existing field of transformative learning - the first is to theoreticians, who have attempted to describe the nature of transformative learning without regard to the content of transformative learning. The editors argue that transformative learning theory cannot be constructed in a content-neutral or context-free way. Their second challenge, which assumes the importance content for transformative learning, is to educators as practitioners. The editors argue that transformative learning requires new educational practices consistent with the content. Arts-based research and arts-based teaching/learning practices are one example of such new educational practices. Education for the soul, or spiritual practices such as meditation or modified martial arts or indigenous peoples' forms of teaching/learning, is another example. Each article in the collection presents a possible model of these new practices.

Better Medicine

For over 130 years, Imperial Oil dominated Canada's oil industry. Their 1947 discovery of crude oil in Leduc, Alberta transformed the industry and the country. But from 1899 onwards, two-thirds of the company was owned by an American giant, making Imperial Oil one of the largest foreign-controlled multinationals in Canada. Imperial Standard is the first full-scale history of Imperial Oil. It illuminates Imperial's longstanding connections to Standard Oil of New Jersey, also known as Exxon Mobil. Although this relationship was often beneficial to Imperial, allowing them access to technology and capital, it also came at a cost, causing Imperial to be assailed as the embodiment of foreign control of Canada's natural resources. Graham D. Taylor draws on an extensive collection of primary sources to explore the complex relationship between the two companies. This groundbreaking history provides unprecedented insight into one of Canada's most influential oil companies as it has grown and evolved with the industry itself.

This ground-breaking text explores the intersection between dominant modes of critical educational theory and the socio-political landscape of American Indian education. Grande asserts that, with few exceptions, the matters of Indigenous people and Indian education have been either largely ignored or indiscriminately absorbed within critical theories of education. Furthermore, American Indian scholars and educators have largely resisted engagement with critical educational theory, tending to concentrate instead on the production of historical monographs, ethnographic studies, tribally-centered curricula, and site-based research. Such a focus stems from the fact that most American Indian scholars feel compelled to address the socio-economic urgencies of their own communities, against which engagement in abstract theory appears to be a luxury of the academic elite. While the author acknowledges the dire need for practical-community based research, she maintains that the global encroachment on Indigenous lands, resources, cultures and communities points to the equally urgent need to develop transcendent theories of decolonization and to build broad-based coalitions.

Fact Stranger Than Fiction: Seventy-Five Years of a Busy Life, with Reminiscences, of Many Great and Good Men and Women

Donner Prize-winning author Dr. David Gratzer (Code Blue) edits and introduces this collection of twelve essays on health care reform in Canada, advocating an open-minded approach to such concepts as privatization, two-tier health care, and user fees. Gratzer has assembled a stellar list of authors who invite Canadians to question their confidence in government-managed public health. Contributors include Order of Canada member and University of Toronto professor Michael Bliss, who argues that our current problems are the result of increasingly aggressive government measures to control patients and health-care providers. Globe and Mail columnist Margaret Wente offers vignettes that address the day-to-day problems of health care: queue jumping, excessive waits, provider burnout, aging equipment, and the politicization of health administration. And, Vancouver-based health analyst Cynthia Ramsey places Canada's health care system in an international context. Her findings are unsettling. Other contributors include McGill economist and National Post contributor William Watson, former Quebec Medical Association president Dr. Edwin Coffey, former Ontario Medical Association president Dr. William Orovan, and Urban Futures Institute executive Director David Baxter. All Canadians concerned about the state of health care in Canada should read this informative and intelligent collection.

Using Karl Polanyi's analysis of the separation of politics and the economy, the book argues that the market economy is not a spontaneous process, but a 'political project' realized through institutional change where labour, land, money, and currently knowledge are commodities. The contributions explore the impact of this commodification process.
