Chasing After Zorro by Britt Lomond is a behind-the-scenes look at the making of the beloved Walt Disney's Zorro television series. During the original thirteen episodes, Britt Lomond played the character of Capitan Monastario, Zorro's most despicable, and loved, villain. To this day, many Zorro fans believe Monastario was the benchmark to which all future Zorro villains had to measure up. Chasing After Zorro will appeal to Zorro fans as well as those who enjoy a look behind the Golden Ages of television.

Software-defined networking (SDN) technologies powered by the OpenFlow protocol provide viable options to address the bandwidth needs of next-generation computer networks. And, since many large corporations already produce network devices that support the OpenFlow standard, there are opportunities for those who can manage complex and large-scale networks using these technologies. Network Innovation through OpenFlow and SDN: Principles and Design explains how you can use SDN and OpenFlow to build networks that are easy to design, less expensive to build and operate, and more

agile and customizable. Among the first books to systematically address the design aspects in SDN/OpenFlow, it presents the insights of expert contributors from around the world. The book's four sections break down basic concepts, engineering design, QoS (quality-of-service), and advanced topics. Introduces the basic principles of SDN/OpenFlow and its applications in network systems Illustrates the entire design process of a practical OpenFlow/SDN Addresses the design issues that can arise when applying OpenFlow to cloud computing platforms Compares various solutions in QoS support Provides an overview of efficient solutions to the integration of SDN with optical networks Identifies the types of network attacks that could occur with OpenFlow and outlines possible solutions for overcoming them Supplying a cutting-edge look at SDN and OpenFlow, this book gives you the wide-ranging understanding required to build, deploy, and manage OpenFlow/SDN products and networks. The book's comprehensive coverage includes system architectures, language and programming issues, switches, controllers, multimedia support, security, and network operating systems. After reading this book you will understand what it takes to make a smooth transition from conventional networks to SDN/OpenFlow networks.

### **MC. The Manufacturing Confectioner**

It's the 1980's, Ronald Reagan is President, and

America has recovered from the crippling energy shortages of the 1970's when OPEC nearly squeezed oil-dependent economies to death. But now the U.S. energy industry is faltering as OPEC again manipulates the international oil markets to wrestle back dominance and force America to her knees one more time. Out of nowhere, rumors of an astonishing alternative energy discovery suddenly emerge and threaten to reshuffle the international balance of power, destroy OPEC, and make the world energy self-sufficient. Fletcher Boyd and Hollis Cade own it . . . for what it's worth and at least for now. Information insidiously leaks and all hell breaks loose as Big Oil, OPEC, and governments explode into action. Who can be trusted? Can a handful of ruggedly individualistic underdogs withstand the massive assault from highly-trained government operatives and corporate security forces? What seems simple is not. What seems logical is not. Energy is power and power means everything to those who wield it. But Fletcher and Hollis don't bend or bow; they're hard men who think for themselves and are willing to fight for principle and what's theirs. Deadly intrigue, numbing twists, and exhilarating action will rivet you to your chair as a question chafes somewhere in the dark recesses of your psyche . . . an itch that can't be scratched. Has this happened? What else will you find in Fracture Gradient? You will find breathtaking action and adventure in the international oil and gas industry, Texas, Saudi Arabia, OPEC and Saudi Aramco, ham radio, private jets, F-4 Phantoms fighting an F-14 Tomcat over northern Minnesota, general aviation carnage, the bin laden family, and a fascinating peek into the concept of hydrogen power derived from a

very common substance! Not enough? Well, then there are the US military veterans fighting for their lives, plenty of gunplay, a damaged marriage, and astounding wealth up for grabs! How's that?

This complete resource of mosaic techniques and design ideas is sure to become your go-to reference. With clear step-by-step sequences, mosaic artist Bonnie Fitzgerald shows how to draw up an idea, cut and arrange tiles, and lay designs successfully. All tools, materials, and equipment are clearly explained, and you'll find helpful hints on setting up a comfortable workspace, as well as essential information on installing your finished mosaics. Includes 10 project descriptions, such as a mirror frame, table top, house number, and two- and three-dimensional artworks. Plus, you'll find tips and sample mosaics from some of the world's leading mosaic artists throughout the book!

The book gathers the chapters of Cognitive InfoCommunication research relevant to a variety of application areas, including data visualization, emotion expression, brain-computer interfaces or speech technologies. It provides an overview of the kind of cognitive capabilities that are being analyzed and developed. Based on this common ground, it may become possible to see new opportunities for synergy among disciplines that were heretofore viewed as being separate. Cognitive InfoCommunication begins by modeling human cognitive states and aptitudes in order to better understand what the user of a system is capable of comprehending and doing. The patterns of exploration and the specific tools that are described can certainly be of interest and of great relevance for all researchers who focus on modeling human states and aptitudes. This innovative research area provides answers to the latest challenges in influence of cognitive states and aptitudes in order to facilitate learning or generally improve performance in certain cognitive tasks such as decision making. Some capabilities are purely human, while others are purely artificial, but in general this distinction is rarely clear-cut. Therefore, when discussing new human cognitive capabilities, the technological background which makes them possible cannot be neglected, and indeed often plays a central role. This book highlights the synergy between various fields that are perfectly

fit under the umbrella of CogInfoCom and contribute to understanding and developing new, human-artificial intelligence hybrid capabilities. These, merged capabilities are currently appearing, and the importance of the role they play in everyday life are unique to the cognitive entity generation that is currently growing up.

### **Critical Infrastructure Protection IX**

The information infrastructure---comprising computers, embedded devices, networks and software systems---is vital to day-to-day operations in every sector: information and telecommunications, banking and finance, energy, chemicals and hazardous materials, agriculture, food, water, public health, emergency services, transportation, postal and shipping, government and defense. Global business and industry, governments, indeed society itself, cannot function effectively if major components of the critical information infrastructure are degraded, disabled or destroyed. Critical Infrastructure Protection describes original research results and innovative applications in the interdisciplinary field of critical infrastructure protection. Also, it highlights the importance of weaving science, technology and policy in crafting sophisticated, yet practical, solutions that will help secure information, computer and network assets in the various critical infrastructure sectors. Areas of coverage include: Themes and Issues, Control Systems Security, Cyber-Physical Systems Security, Infrastructure Security, Infrastructure Modeling and Simulation, Risk and Impact

Assessment. This book is the ninth volume in the annual series produced by the International Federation for Information Processing (IFIP) Working Group 11.10 on Critical Infrastructure Protection, an international community of scientists, engineers, practitioners and policy makers dedicated to advancing research, development and implementation efforts focused on infrastructure protection. The book contains a selection of nineteen edited papers from the Ninth Annual IFIP WG 11.10 International Conference on Critical Infrastructure Protection, held at SRI International, Arlington, Virginia, USA in the spring of 2015. Critical Infrastructure Protection IX is an important resource for researchers, faculty members and graduate students, as well as for policy makers, practitioners and other individuals with interests in homeland security. Mason Rice is an Assistant Professor of Computer Science at the Air Force Institute of Technology, Wright-Patterson Air Force Base, Ohio, USA. Sujeet Shenoi is the F.P. Walter Professor of Computer Science and a Professor of Chemical Engineering at the University of Tulsa, Tulsa, Oklahoma, USA.

### **Fracture Gradient**

From the Queen of Erotica, a smart, witty, and extremely sexy collection of short stories—the second volume to her highly successful Zane’s Sex Chronicles, the book behind the Cinemax series. Scenarios run the gamut from committed, monogamous couples looking to experiment to wild, single sisters who form a very unconventional sorority. You’ll meet a high-paid multitasking career woman who gets her groove back in “When Opposites Attract.” You’ll take a ride with an adventurous couple who try something new in “The Subway—A Quickie.” You’ll discover a new way of celebrating Christmas in “The Santa Claus.” Spicing up real-life scenarios with over-the-top sexual fantasy, Zane gives readers the best time they’ve ever had between the pages of a book. Zane’s hottest collection yet, with all-new characters and settings, these stories are tailored to women—but perfect for lovers to share.

"Raymond Chen is the original raconteur of Windows."  
--Scott Hanselman, ComputerZen.com "Raymond has been at Microsoft for many years and has seen many nuances of Windows that others could only ever hope to get a glimpse of. With this book, Raymond shares his knowledge, experience, and anecdotal stories, allowing all of us to get a better understanding of the operating system that affects millions of people every day. This book has something for everyone, is a casual read, and I highly recommend it!" --Jeffrey Richter, Author/Consultant, Cofounder of Wintellect  
"Very interesting read. Raymond tells the inside story

of why Windows is the way it is." --Eric Gunnerson, Program Manager, Microsoft Corporation "Absolutely essential reading for understanding the history of Windows, its intricacies and quirks, and why they came about." --Matt Pietrek, MSDN Magazine's Under the Hood Columnist "Raymond Chen has become something of a legend in the software industry, and in this book you'll discover why. From his high-level reminiscences on the design of the Windows Start button to his low-level discussions of GlobalAlloc that only your inner-geek could love, The Old New Thing is a captivating collection of anecdotes that will help you to truly appreciate the difficulty inherent in designing and writing quality software." --Stephen Toub, Technical Editor, MSDN Magazine Why does Windows work the way it does? Why is Shut Down on the Start menu? (And why is there a Start button, anyway?) How can I tap into the dialog loop? Why does the GetWindowText function behave so strangely? Why are registry files called "hives"? Many of Windows' quirks have perfectly logical explanations, rooted in history. Understand them, and you'll be more productive and a lot less frustrated. Raymond Chen--who's spent more than a decade on Microsoft's Windows development team--reveals the "hidden Windows" you need to know. Chen's engaging style, deep insight, and thoughtful humor have made him one of the world's premier technology bloggers. Here he brings together behind-the-scenes explanations, invaluable technical advice, and illuminating anecdotes that bring Windows to life--and help you make the most of it. A few of the things you'll find inside: What vending machines can teach you about effective user interfaces A deeper

understanding of window and dialog management  
Why performance optimization can be so  
counterintuitive A peek at the underbelly of COM  
objects and the Visual C++ compiler Key details  
about backwards compatibility--what Windows does  
and why Windows program security holes most  
developers don't know about How to make your  
program a better Windows citizen

### **Temi veneta**

This book constitutes the refereed proceedings of the 8th International Conference on Active Media Technology, AMT 2012, held in Macau, China, in December 2012. The 65 revised full papers were carefully reviewed and selected from a numerous submissions. The papers are organized in topical sections on awareness multi-agent systems, data mining, ontology mining, web reasoning, social applications of active media, human-centered computing, personalization and adaptation, smart digital art and e-learning.
