Biometrics - the physiological and/or behavioural characteristics that can be used to verify the identity of an individual - are no longer just being used in high security locations; they are now in use in major, mainstream government and commercial applications. Since September 11, the heightened awareness of security issues is driving forward the adoption of biometrics within numerous application environments. Coupled with a dramatic decrease in the price of such systems and the formulation of comprehensive industry standards, the market looks set for rapid growth over the next 5 years. The second edition of The Biometric Industry Report - Forecasts and Analysis to 2006 examines the current use and future growth of biometrics. It analyses the trends in markets, technologies and industry structure and profiles the major players. The report provides key market statistics and forecasts essential for companies to plot their future growth strategies. For a PDF version of the report please call Sarah Proom on +44 (0) 1865 843181 for price details.

## **Plunkett's Infotech Industry Almanac 2001-2002**

### **Facilities Design & Management**

### **Major Information Technology Companies of the World**

"This book explores important and emerging advancements in digital identity and access management systems, providing innovative answers to an assortment of problems as system managers are faced with major organizational, economic and market changes"--Provided by publisher.

### **Datamation**

### **Digital Dilemmas and Solutions**

### **Production & Inventory Management Review & APICS News**

The Handbook of Information Security is a definitive 3-volume handbook that offers coverage of both established and cutting-edge theories and developments on information and computer security. The text contains 180 articles from over 200 leading experts, providing the benchmark resource for information security, network security, information privacy, and information warfare.

### **Advances in Surface Acoustic Wave Technology, Systems and Applications**

InfoTech being any technology that moves or manages voice, data or video - whether that movement be via wireless methods, fiber optics, traditional copper wire, telephony, computer network or emerging methods. Each industry segment & the most outstanding corporations within those industries are featured. It includes dozens of tables, indexes by product, services & geography, plus corporate rankings for sales, profits & research budgets. Complete profiles on Plunkett's InfoTech 500 Firms include companies in telecommunications, software, hardware, on-line services, information management, systems integration, outsourcing & more.

### **BoogarLists | Directory of IT Systems & Services**

Surface acoustic wave (SAW) devices are recognized for their versatility and efficiency in controlling and processing electrical signals. This has resulted in a multitude of device concepts for a wide range of signal processing functions, such as delay lines, filters, resonators, pulse compressors, convolvers, and many more. As SAW technology has found its way into mass market products such as TV receivers, pagers, keyless entry systems and cellular phones, the production volume has risen to millions of devices produced every day. At the other end of the scale, these are specialized high performance signal processing SAW devices for satellite communication and military applications, such as radar and electronic warfare. This volume, together with Volume 1, presents an overview of recent advances in SAW technology, systems and applications by some of the foremost researchers in this exciting field. Contents: Coupling-of-Modes Analysis of SAW Devices (V Plessky & J Koskela); Theory and Applications of Green's Functions (A R Baghai-Wadji); New Piezoelectric Substrates for SAW Devices (J Kosinski); Pseudo and High Velocity Pseudo SAWs (M P da Cunha); SAW Devices Beyond 5 GHz (H Odagawa & K Yamanouchi); Wireless SAW Identification and Sensor Systems (F Schmidt & G Scholl); Interaction of Surface Acoustic Waves, Electrons, and Light (A Wixforth). Readership: Graduate students, researchers and academics in device and circuit design, as well as designers of mobile communications systems.

Today, all librarians face daunting challenges posed by trends in technology, publishing, and education as the impact of a globalising information economy forces a rethink of both library strategic directions and everyday library operations. This book brings together the main issues and dilemmas facing libraries; the book clearly shows how to deal with them, and provides a best-practice guide to the solutions. Provides analysis of recent trends and relevant and viable solutions to problems facing all librarians Written by a highly knowledgeable and well-respected practitioner in the field Draws on the author's international and practical experience in libraries and experience of leading-edge developments in the field

## **Digital Identity and Access Management: Technologies and Frameworks**

This volume features the refereed proceedings of the 4th International Conference on Trust and Privacy in Digital Business. The 28 papers were all carefully reviewed. They cover privacy and identity management, security and risk management, security requirements and development, privacy enhancing technologies and privacy management, access control models, trust and reputation, security protocols, and security and privacy in mobile environments.

## BoogarLists | Directory of Software Solutions

Internet-based information systems, the second covering the large-scale integration of heterogeneous computing systems and data resources with the aim of providing a global computing space.

Each of these four conferences encourages researchers to treat their respective topics within a framework that incorporates jointly (a) theory, (b) conceptual design and development, and (c) applications, in particular case studies and industrial solutions. Following and expanding the model created in 2003, we again solicited and selected quality workshop proposals to complement the more “archival” nature of the main conferences with research results in a number of selected and more “avant-garde” areas related to the general topic of Web-based distributed computing. For instance, the so-called Semantic Web has given rise to several novel research areas combining linguistics, information systems technology, and artificial intelligence, such as the modeling of (legal) regulatory systems and the ubiquitous nature of their usage. We were glad to see that ten of our earlier successful workshops (ADI, CAMS, EI2N, SWWS, ORM, OnToContent, MONET, SEMELS, COMBEK, IWSSA) re-appeared in 2008 with a second, third or even 4th edition, sometimes by alliance with other newly emerging workshops, and that no fewer than three brand-new independent workshops could be selected from proposals and hosted: ISDE, ODIS and Beyond SAWSDL. Workshop attendees productively mingled with each other and with those of the main conferences, and there was

considerable overlap in authors.
