NCLEX-RN® Alternate-Format Q&A

This primary textbook for a first course in pharmacology offers an integrated, systems-based, and mechanism-based approach to understanding drug therapy. Each chapter focuses on a target organ system, begins with a clinical case, and incorporates cell biology, biochemistry, physiology, and pathophysiology to explain how and why different drug classes are

effective for diseases in that organ system. Over 400 two-color illustrations show molecular, cellular, biochemical, and pathophysiologic processes underlying diseases and depict targets of drug therapy. Each Second Edition chapter includes a drug summary table presenting mechanism, clinical applications, adverse effects, contraindications, and therapeutic considerations. New chapters explain how drugs produce adverse effects and describe the life cycle of drug development. The fully searchable online text and an image bank are available on thePoint.

Arithmetic Review and Drug Therapy for Practical Nurses

Abrams' Clinical Drug Therapy

This title is directed primarily towards health care professionals outside of the United States. An understanding of medicines and their effects on patients remains a crucial area of nursing knowledge. This book provides a thorough foundation upon which nurses can build their clinical experience to achieve competence. It not only provides information on the actions of drugs on the body but also gives clear guidance on the practical aspects of medicines management in both hospital and community. Organisation of the text broadly follows the British National Formulary for ease of use. Management of medicines linked to their therapeutic use Medicine administration linked with relevant care of patients where possible Basic principles of clinical pharmacology underpin the therapeutic chapters A chapter on the role of patients and carers is included All content revised in the light of changes in drug therapy, clinical practice and medicines management including nurse prescribing Key objectives for each chapter Self-assessment exercises with answers More detail relating to palliative care; nurse prescribing A new section on Intensive Therapy Totally redesigned in two colours with improved design and page layout, and better illustrations

Pharmacology

The only pharmacology resource specifically written by and for nurse practitioners, this new edition provides a greater emphasis on prototype drugs while retaining its comprehensive approach to the pharmacology content needed by the primary care provider. New features include prototype drug lists in the coverage of drug classes that receive expanded coverage, detailed patient teaching guidelines, expanded content in both the geriatric and pediatric chapters, a special icon identifying the Top 200 Drugs, and highlighted Clinical Alerts. Comprehensive coverage is provided of all drugs commonly prescribed and used in the primary care setting. Prototype drugs are presented first in each drug class, with expanded coverage of these agents. Clear explanations describe how each drug in a class differs from its prototype. Detailed information shows how to provide effective patient teaching, as well as how to gain patient compliance. Chapters focus on

the practitioner's role in patient teaching, drug action, and drug therapy. Online Resources are provided at the end of each chapter. The Top 200 Drugs are described according to the number of U.S. prescriptions dispensed. Five new units improve the organization of material: Renal/Genitourinary Agents (Unit 8); Psychotropic Agents (Unit 11); Endocrine Agents (Unit 12); Female Reproductive Agents (Unit 13); and Health Promotion (Unit 15). New chapters examine over-the-counter medications, compliance and the therapeutic experiment, overview of the nervous system, substance abuse, treatment of common infections, weight management, and complementary and alternative treatments. Reorganized and redesigned format and headings are more consistent and easy to follow. Content has been expanded in the geriatric and pediatric "special populations" chapters (Ch. 6 and 7). More concise coverage of disease processes features clearer ties to the Mechanism of Action sections. 25 new figures have been added to the pathophysiology and Mechanisms of Action sections. A Table of Common Interactions is included on the inside of the back cover.

Based on student feedback, Saunders Q&A Review for the NCLEX-PN® Examination is organized to address specific Client Needs and Integrated Processes to mirror the NCLEX-PN test plan. This review follows Silvestri Comprehensive Review as the natural next step for students in the Silvestri suite of products. It contains 3,200 practice questions—including Alternate Item Format—that include comprehensive rationales for both correct and incorrect options, test-taking strategies, and a textbook page reference for further explanation. This title includes additional digital media when purchased in print format. For this digital book edition, media content may not be included. Remediation tied directly back to your Elsevier textbooks provides resources for further study. Content is organized according to Client Needs, providing an organized review for exam preparation and end-of-course or exit standardized exams. Practice questions, answers, and detailed rationales all appear on the same page, giving you immediate feedback on your responses. Detailed test-taking strategies for each question give you clues for analyzing and uncovering the correct answer option. Rationales are provided for both correct and incorrect options. Provides computerized testing practice in study, quiz, or exam modes, to allow you to choose from 21 different content categories and focus your study sessions. Each question is categorized by level of cognitive ability, Client Needs area, integrated process, and clinical content area to allow you multiple study and exam selections. Contains chapters on academic and nonacademic NCLEX-PN preparation, advice from a recent nursing graduate, and test-taking strategies that help you understand complicated exam questions. Comprehensive exam consists of 85 questions related to all content areas in the book and representative of the percentages identified in the NCLEX-PN test plan.

The fully revised and updated edition of this essential pharmacology textbook presents pharmacologic principles in an accessible, full-color format. Featuring Prototype Drug Charts, Nursing Process Charts, and an extensive math/dosage calculations section, this fourth edition includes updated content throughout, including 75 new full-color drug labels. It also includes six new chapters, new Herb Alert boxes, and an expanded ancillary package. Nursing Process Charts relate nursing care to drug therapy. For each step of the nursing process, concise bulleted points outline the plan of care in relation to treatment for selected drug prototypes. A drug calculations chapter, with an 85-page review of dosage calculations, covers a basic math review, all four methods of calculating dosages, and dosage calculations in various settings and for different routes of administration. A comprehensive guide to medication administration addresses all routes of administration in various settings. Unit openers for drug therapy chapters include illustrated anatomy and physiology overviews and provide a foundation for understanding how each drug works in that body system. Nearly 100 Prototype Drug Charts are included

for selected prototype drugs. Each chart lists Drug Class, Dosage, Contraindications, Drug-Lab-Food Interactions, Pharmacokinetics, Pharmacodynamics, Therapeutic Effects/Uses, and Adverse Reactions. Client Teaching sections in each Nursing Process Chart provide client-oriented instructions. Cultural Considerations are covered in a separate chapter and, where appropriate, culturally sensitive client teaching is included in the Nursing Process Charts. Critical Thinking in Action boxes present a clinical scenario and questions for analysis and critical thinking. Study questions appear at the end of every chapter. Includes 75 new full-color drug labels to familiarize students with new medications used in practice. Features an expanded emphasis on herbal therapies, including new Herb Alert boxes and herbal interaction icons throughout the drug families chapters. Coverage of dimensional analysis has been added to the chapter on Medication and Calculations. Features six new chapters: Pediatric Pharmacology, Geriatric Pharmacology, Antipsychotics and Anxiolytics, Antidepressants and Mood Stabilizers, Drugs for the Female Reproductive Cycle I: Pregnancy and Preterm Labor, and Drugs for the Female Reproductive Cycle II: Labor and Delivery. Each method of dosage calculation is consistently highlighted with a distinctive color for easy reference and identification. Full-color Prototype Drug Charts and Nursing Process Charts have been redesigned for easy use.
