Cyprus and looked at the wood fragments arrayed before him. They were old beyond belief. For more than two millennia they had remained on the sea floor, eaten by worms and soaking up seawater until they had the consistency of wet cardboard. There were some 6,000 pieces in all, and Steffy's job was to put them all back together in their original shape like some massive, ancient jigsaw puzzle. He had volunteered for the job even though he had no qualifications for it. For twenty-five years he'd been an electrician in a small, land-locked town in Pennsylvania. He held no advanced degrees—his understanding of ships was entirely self-taught. Yet he would find himself half a world away from his home town, planning to reassemble a ship that last sailed during the reign of Alexander the Great, and he planned to do it using mathematical formulas and modeling techniques that he'd developed in his basement as a hobby. The first person ever to reconstruct an ancient ship from its sunken fragments, Steffy said ships spoke to him. Steffy joined a team, including friend and fellow scholar George Bass, that laid a foundation for the field of nautical archaeology. Eventually moving to Texas A&M University, his lack of the usual academic credentials caused him to be initially viewed with skepticism by the university's administration. However, his impressive record of publications and his skilled teaching eventually led to his being named a full professor. During the next thirty years of study, reconstruction, and modeling of submerged wrecks, Steffy would win a prestigious MacArthur Foundation "genius" grant and would train most of the preeminent scholars in the emerging field of nautical archaeology. Richard Steffy's son Loren, an

Today, the Graduate Aptitude Test in Engineering (GATE) is one of the prestigious, toughest and recognized national level examinations for engineering students. This book has been written by utilizing a couple of decade's experience of the authors in the teaching profession. The text is intended for the aspirants of GATE examination. It should also be equally useful for those who wish to crack the examinations of public sector units like DRDO, BARC, BHEL, DVC, NTPC, ONGC, SAIL, ISRO, GAIL, NHPC, PGCIL, IOCL, HAL and many more Public Sector Undertakings. The book will also be useful for those who want to appear for IES examination. It fosters the nomenclature of the chapters according to the

Abuse of Power is a real life account written by Johnny Mack of his experiences during a three year period of being wrongfully accused and prosecuted by the United States government through the US Patriot act and subsequently fighting for and winning back his freedom. Johnny was compelled to write the book because he felt that if this situation could happen to him, a law abiding citizen of the United States of America, it could happen to anyone. He feels the book is a wakeup call to all citizens of the United States of America, to remember that we, the citizens of this country, through our elected officials, run this country. We have responsibilities as citizens to make ourselves aware of relevant issues and to make our voices heard through our local and state governments.
