Business Essentials

"The Essential Retirement Guide will detail saving for retirement-- when, why, how, and how much. There is much miscommunication and false information about retirement planning. Inconsistencies such as retirement target percentages of final pay, the amount of retirement income needed, and the use of proper investment vehicles, most of which cost hundreds of thousands of dollars more than necessary, all add to the mystification of most retirement planning advice. The book will answer: - When should I start to save? - What takes priority: paying off the mortgage or saving for retirement? - What is the most tax-effective investment vehicle during the accumulation phase? - How should I invest? - How much money do I need to retire comfortably? - How much retirement income will I need? - What percentage of my assets can I spend each year in retirement? - How will my spending habits change over the course of my retirement? - Do I need to worry about the cost of long-term care?"--

This introductory textbook for business statistics teaches statistical analysis and research methods via business case studies and financial data using Excel, Minitab, and SAS. Every chapter in this textbook engages the reader with data of individual stock, stock indices, options, and futures. One studies and uses statistics to learn how to study, analyze, and understand a data set of particular interest. Some of the more popular statistical programs that have been developed to use statistical and computational methods to analyze data sets are SAS, SPSS, and Minitab. Of those, we look at Minitab and SAS in this textbook. One of the main reasons to use Minitab is that it is the easiest to use among the popular statistical programs. We look at SAS because it is the leading statistical package used in

industry. We also utilize the much less costly and ubiquitous Microsoft Excel to do statistical analysis, as the benefits of Excel have become widely recognized in the academic world and its analytical capabilities extend to about 90 percent of statistical analysis done in the business world. We demonstrate much of our statistical analysis using Excel and double check the analysis and outcomes using Minitab and SAS—also helpful in some analytical methods not possible or practical to do in Excel.
