Shock wave-boundary-layer interaction (SBLI) is a fundamental phenomenon in gas dynamics that is observed in many practical situations, ranging from transonic aircraft wings to hypersonic vehicles and engines. SBLIs have the potential to pose serious problems in a flowfield; hence they often prove to be a critical - or even design limiting - issue for many aerospace applications. This is the first book devoted solely to a comprehensive, state-of-the-art explanation of this phenomenon. It includes a description of the basic fluid mechanics of SBLIs plus contributions from leading international experts who share their insight into their physics and the impact they have in practical flow situations. This book is for practitioners and graduate students in aerodynamics who wish to familiarize themselves with all aspects of SBLI flows. It is a valuable resource for specialists because it compiles experimental, computational and theoretical knowledge in one place.

Written by an experienced engineer, this new primer textbook covers all the basic techniques of model engineering: understanding engineering drawings; setting up a workshop; buying materials; marking out; sawing; filing; bending & forming metals; drilling & boring holes. The book includes a review of the properties and characteristics of engineering materials and describes the hardening of carbon steel for cutting tools in the home workshop. Sources of information for model engineers are described together with the principal types of activity and common modelling scales. Points for consideration when buying a lathe are covered, plus how it should be set up and operated. Also included is information on the preparation and sharpening of lathe tools and their use for the basic turning processes. A major chapter is dedicated to the adaptation of the lathe for milling and boring, and the use of the commonest types of milling cutter. Profusely illustrated with line drawings and photographs, this is a comprehensive guide aimed at students and practical people with little experience of working with metal and wishing to embark on this fascinating hobby.

Motorcycles and Our 2nd 50 Years

The world is on an inexorable path toward the apocalypse, currently exhibiting many of the Bibles prophesied signs of the end times. When the Jews regained nationhood in May 1948, the countdown began toward the promised return of the Messiah. In Fifty Signs of the End Times, compelling new information is shared demonstrating that the end-time clock is nearing midnight, including: How the alignment of the nations soon to come against Israel is exactly as prophesied in the Bible. The many ways that God has honored His promise to richly bless Israel in the latter days including the discovery of new energy sources. Recent and detailed information concerning the coming Tribulation Temple. Amazing accounts

demonstrating how God is pouring out His Spirit in these latter days. How God has miraculously protected Israel in its recent wars. Revealing how twelve of Christs prophecies in His Olivet Discourse have come true in our time. Dr. David Nichols explains these intriguing signs, and dozens more, in meticulous detail. We are fast approaching Armageddon. However, this need not cause alarm. God has provided an escape. I have well over fifty prophecy volumes in my library and can honestly say that none display more of the detailed and accurate research as seen in this book. Every prophecy student worth his salt needs to read it! ---Dr. H.L. Willmington, Founder and Dean, Liberty Home Bible Institute David Nichols has written an excellent study on the signs of the end times. His biblical knowledge, medical and scientific perspective, and analysis of the culture make this an incredible study. Dont miss it. ---Dr. Ed Hindson, Asst. Chancellor, Liberty University; Host of The King is Coming

Understanding Housing Finance

When the Strasburg Rail Road was chartered in 1832, no one anticipated the myriad of obstacles the short line would encounter. What began as an afterthought in the early 19th century eventually became one of America's premier steam train excursions and the most visited heritage railroad in the continental United States. By 1957, the declining condition of its rails and the lack of freight and passenger service seemed to mark the end of the railroad, but it was given new life in 1958, and not even the wildest imagination foresaw the remarkable transformation and development this "Methuselah of railroads" would undergo. This book chronicles the unlikely success of America's oldest continuously operating railroad. Explore how and why Strasburg's four-and-a-half-mile line survived, and discover the story behind its ascension to prominence as an iconic, internationally known, small-town steam railroad.

The Lost Pirate

Vast and brilliant white, P&O's flagship the SS Canberra was a final salute to a bygone era of opulence even as she embarked on her maiden voyage, For a decade she carried passengers between Britain and Australia, a 90-day voyage of pampering and decadence. But in March 1982, Britain went to war to defend the Falkland Islands and the SS Canberra found herself, surreally, requisitioned as a troop ship to carry the Marines and Paratroops into battle. Against all odds she survived, playing a vital role as a hospital ship, At the end of the war she arrived back in Southampton to a heroes welcome, where she became fondly known as the Great White Whale. This is the extraordinary and, as yet, untold story of how the crew of a luxury ocean liner: waiters, cooks, nurses and cleaners, found themselves suddenly thrust onto the front line. A Very Strange Way to Go to War is a candid and captivating story, drawing from first hand accounts and previously unpublished archives, of the heroic courage of ordinary British men and women in the face of great adversity, at the outpost of empire.

George Smythe spills his blood for The Cause before he has a conscious thought as to either its true nature or his role as its leader. His mortal and immortal enemy nearly slays him whilst he's on holiday in Mexico touring pre-Columbian archaeological sites. The Nagual shaman who rescues him from death realizes his potential to wield Puramore for the thirteenth and last time as he brings him back to life. General Sir George Smythe battles Wingtip, an avatar of China's first emperor, to turn the tide of mankind's survival dilemma decidedly in their favour. In order to prevail against their mortal and immortal foe, they marshal all the intellectual resources at their disposal to overcome Wingtip's spiritual advantage. Time is of the essence since their foe is on the brink of delivering the final coup d'état to mankind. In the end, only the wielder of Puramore possesses an advantage over humanity's ancient nemesis. Will George Smythe prove himself worthy to acquire the Divine Blade?

Tuning Volkswagens

Design optimization methods that use the Reynolds-averaged Navier-Stokes equations with the associated turbulence and transition models, or other model-based forms of the governing equations, may result in aerodynamic designs with actual performance levels that are noticeably different from the expected values because of the complexity of modeling turbulence/transition accurately in certain flows. Flow phenomena such as wake-blade interaction and trailing edge vortex shedding in turbines and compressors (examples of such flows) may require a computational approach that is free of transition/turbulence models, such as direct numerical simulations (DNS), for the underlying physics to be computed accurately. Here we explore the possibility of utilizing DNS data in designing a turbine blade section. The ultimate objective is to substantially reduce differences between predicted performance metrics and those obtained in reality. The redesign of a typical low-pressure turbine blade section with the goal of reducing total pressure loss in the row is provided as an example. The basic ideas presented here are of course just as applicable elsewhere in aerodynamic shape optimization as

long as the computational costs are not excessive. Rai, Man M. Ames Research Center NASA/TM-2015-218932, ARC-E-DAA-TN28338
