from Broadway to Hollywood in his candid and witty autobiography. Shortly after returning from active duty in World War II, Windom entered the acting world, launching his career in parts on and off Broadway in the late 1940s and 1950s. With refreshing candor, he tells how he landed his first Hollywood role as the winning attorney against Gregory Peck in 1962's "To Kill a Mockingbird" and then went on to act in popular television series including "Columbo," "Star Trek," "All In the Family," and "Dallas," But perhaps his most enjoyable roles came from his regular appearances on "The Farmer's Daughter,," and as Doc Hazlitt in the popular "Murder, She Wrote," Through Windom's personal anecdotes, Hollywood aficionados can get up close and personal with some of the industry's biggest names, including John Wayne, Sam Goldwyn, and Angela Lansbury, and aspiring performers can glean wisdom on choosing agents and managers, working with directors, and performing an audition by following Windom's expert and time-tested advice. Humorous, honest, and endlessly entertaining, "Journeyman Actor" delivers an intimate glimpse into the career of one of Hollywood's most successful character actors.

Course Overview On February 28, 2003, President Bush issued Homeland Security Presidential Directive-5. HSPD-5 directed the Secretary of Homeland Security to develop and administer a National Incident Management System (NIMS). NIMS provides a consistent nationwide template to enable all government, private-sector, and nongovernmental organizations to work together during domestic incidents. You can also find information about NIMS at <http://www.fema.gov/nims/> This course introduces NIMS and takes approximately three hours to complete. It explains the purpose, principles, key components and benefits of NIMS. Pests and diseases inflict a devastating impact on the quantity and quality of food production. Pesticides play a vital role in crop protection, although their excessive use poses a potential health hazard and a threat to food security and human and environmental safety. This book overviews developments on pesticides and pests that are relevant to agriculture in the Indian sub-continent, Asia and the world at large. These topics impact free world trade both directly and indirectly. The volume brings together the latest information about chemical, botanical, biorational pesticides and bioagents, international specifications for pesticide formulations,

Although the semirigidity concept was introduced many years ago, steel structures are usually designed by assuming that beam-to-column joints are either pinned or rigid. These assumptions allow a great simplification in structural analysis and design-but they neglect the true behavior of joints. The economic and structural benefits of semirigid joints are well known and much has been written about their use in braced frames. However, they are seldom used by designers, because most semirigid connections have highly nonlinear behavior, so that the analysis and design of frames using them is difficult. In fact, the design problem becomes more difficult as soon as the true rotational behavior of beam-to-column joints is accounted for-the design problem requires many attempts to achieve a safe and economical solution. *Structural Steel Semirigid Connections* provides a comprehensive source of information on the design of semirigid frames, up to the complete detailing of beam-to-column connections, and focuses on the prediction of the moment-rotation curve of connections. This is the first work that contains procedures for predicting the connection plastic rotation supply-necessary for performing the local ductility control in nonlinear static and dynamic analyses. Extensive numerical examples clarify the practical application of the theoretical background. This exhaustive reference and the awareness it provides of the influence of joint rotational behavior on the elastic and inelastic responses of structures will greatly benefit researchers, professionals, and specification writing bodies devoted to structural steel.

The National Incident Management System (NIMS) provides a systematic, proactive approach to guide departments and agencies at all levels of government,

nongovernmental organizations, and the private sector to work seamlessly to prevent, protect against, respond to, recover from, and mitigate the effects of incidents, regardless of cause, size, location, or complexity, in order to reduce the loss of life and property and harm to the environment. NIMS works hand in hand with the National Response Framework (NRF). NIMS provides the template for the management of incidents, while the NRF provides the structure and mechanisms for national-level policy for incident management. On February 28, 2003, the President issued Homeland Security Presidential Directive 5 (HSPD-5), "Management of Domestic Incidents," which directed the Secretary of Homeland Security to develop and administer a National Incident Management System (NIMS). This system provides a consistent nationwide template to enable Federal, State, tribal, and local governments, nongovernmental organizations (NGOs), and the private sector to work together to prevent, protect against, respond to, recover from, and mitigate the effects of incidents, regardless of cause, size, location, or complexity. This consistency provides the foundation for utilization of NIMS for all incidents, ranging from daily occurrences to incidents requiring a coordinated Federal response. NIMS represents a core set of doctrines, concepts, principles, terminology, and organizational processes that enables effective, efficient, and collaborative incident management. HSPD-5 requires all Federal departments and agencies to adopt NIMS and to use it in their individual incident management programs and activities, as well as in support of all actions taken to assist State, tribal, and local governments. The directive requires Federal departments and

agencies to make adoption of NIMS by State, tribal, and local organizations a condition for Federal preparedness assistance (through grants, contracts, and other activities). NIMS recognizes the role that NGOs and the private sector have in preparedness and activities to prevent, protect against, respond to, recover from, and mitigate the effects of incidents. Building on the foundation provided by existing emergency management and incident response systems used by jurisdictions, organizations, and functional disciplines at all levels, NIMS integrates best practices into a comprehensive framework for use nationwide by emergency management/response personnel in an all-hazards context. These best practices lay the groundwork for the components of NIMS and provide the mechanisms for the further development and refinement of supporting national standards, guidelines, protocols, systems, and technologies. NIMS fosters the development of specialized technologies that facilitate emergency management and incident response activities, and allows for the adoption of new approaches that will enable continuous refinement of the system over time. The Secretary of Homeland Security, through the National Integration Center (NIC), Incident Management Systems Integration Division (formerly known as the NIMS Integration Center), publishes the standards, guidelines, and compliance protocols for determining whether a Federal, State, tribal, or local government has implemented NIMS. Additionally, the Secretary, through the NIC, manages publication and collaboratively, with other departments and agencies, develops standards, guidelines, compliance procedures, and protocols for all aspects of NIMS.
