## The Global Mind and the Rise of Civilization

"As someone who has spent forty years in psychology with a long-standing interest in evolution, I'll just assimilate Howard Bloom's accomplishment and my amazement."-DAVID SMILLIE, Visiting Professor of Zoology, Duke University  
In this extraordinary follow-up to the critically acclaimed *The Lucifer Principle*, Howard Bloom—one of today's preeminent thinkers—offers us a bold rewrite of the evolutionary saga. He shows how plants and animals (including humans) have evolved together as components of a worldwide learning machine. He describes the network of life on Earth as one that is, in fact, a "complex adaptive system," a global brain in which each of us plays a sometimes conscious, sometimes unknowing role. and he reveals that the World Wide Web is just the latest step in the development of this brain. These are theories as important as they are radical. Informed by twenty years of interdisciplinary research, Bloom takes us on a spellbinding journey back to the big bang to let us see how its fires forged primordial sociality. As he brings us back via surprising routes, we see how our earliest bacterial ancestors built multitrillion-member research and development teams a full 3.5 billion years ago. We watch him unravel the previously unrecognized strands of interconnectedness woven by crowds of trilobites, hunting packs of dinosaurs, feathered flying lizards gathered in flocks, troops of baboons making communal decisions, and adventurous tribes of protohumans spreading across continents but still linked by primitive forms of information networking. We soon find ourselves reconsidering our place in the world. Along the way, Bloom offers us exhilarating insights into the strange tricks of body and mind that have organized a variety of life forms: spiny lobsters, which, during the Paleozoic age, participated in communal marching rituals; and bees, which, during the age of dinosaurs, conducted collective brainwork. This fascinating tour continues on to the sometimes brutal subculture wars that have

spurred the growth of human civilization since the Stone Age. Bloom shows us how culture shapes our infant brains, immersing us in a matrix of truth and mass delusion that we think of as reality. Global Brain is more than just a brilliantly original contribution to the ongoing debate on the inner workings of evolution. It is a "grand vision," says the eminent evolutionary biologist David Sloan Wilson, a work that transforms our very view of who we are and why.

### **Global Brain**

An emotional story about a man coming to terms with his past, pressing forward with life, and learning to love again. Four years after the death of his boyfriend, Alex has become an empty shell of his old self. Numb and indifferent, he has allowed his life to spin out of control. But, when an old, familiar face begins at Alex's workplace, he is suddenly confronted by his traumatic past and withdraws from life entirely, attempting to block out the horrors he has so long tried to forget-then, he meets Kit, and life is never the same again. A random night, a random bar-that's how it began. But when Alex drunkenly confesses everything he's bottled up for years to the stranger, his life changes. Kit helps him get back on his feet, embrace and accept his past, forgive himself, and take charge of his life once more. As Alex reclaims his life, he begins to feel something that he hasn't felt in years-happiness. Reader Advisory: This Erotic Gay Romance contains adult themes.

### **The Lucifer Principle**

Readers will feel they know someone just like the characters in this timely novel on social status and social media. Steen Sand, CEO of Stensure Networks, is the head honcho at an IT firm that's developed an Internet service to monitor, compute, and publish people's social status. His chief operating officer, Irene Lund, serves as his muse. He needs her to be part of his world, or he can't achieve anything of significance. But does she feel the same? Chief financial officer, Michael Jensen, is a hard-core pessimist who has learned the hard way not to speak up against the status quo, in spite of his natural inclination to do so. Jensen's a numbers guy. He relates to spreadsheets better than he does to people. Will this cost him in the end? Louise Hald, chief marketing officer, joined Stensure's management team after leaving her post as an assistant professor at a business school. She's beginning to wonder if she'll ever move past the "assistant" part in the eyes of her coworkers. What can she do to ensure she gets ahead? And then there's Sophie Bech. She's made the long trip back to Denmark from South Africa for her own private reasons, and everything looks different to her now. She wonders what her return will hold for her. Was it a mistake? Will her fresh set of eyes-and values-help or hinder the team? Reductionism-understanding complex things by reducing them to fundamental parts and interactions-comes up against social status, so subtle, intricate, and sought-after, in this intriguing modern-day novel. Will these characters-and their supporting players-make the changes they need to survive in today's world? Or will they succumb to the allure of using easy but underhanded methods to get ahead?

## **Brain Evolution by Design**

All the talk about "open innovation" and externally-focused innovation assumes that "one size fits all" in terms of what network-centric innovation is and how companies should harness external creativity. But the reality is that there is no one right way to master this tool. For instance, loosely governed community-based innovation projects are a very different animal from tightly-orchestrated development projects driven by a large firm. As the landscape of network-centric innovation becomes more diverse and more confusing, there is a desperate need to structure the landscape to better understand different models for network-centric innovation. This book brings clarity to the confusion. Further, it argues that managers cannot rely on anecdotal success stories they read about in the press to implement a network-centric innovation strategy. They need rigorous and analytical advice on what role their company should play in an innovation network, what capabilities they need to create, and how they need to prepare their organization for this significant shift in the innovation approach. This book offers a practical and detailed roadmap for planning and implementing an externally-focused innovation strategy.

## **What's Your Green Goldfish?**

Peter Russell, an acclaimed author and speaker, weaves-together modern technology and ancient mysticism to present a startling vision of the world to come, where humanity is a fully conscious superorganism in an awakening universe. The human potential movement, he shows, is growing fast and influencing business, politics and medicine.

## **Constructed**

In the last ten years neural ensemble recording grew into a well-respected and highly data-lucrative science. New experimental paradigms, including the fabrication of high-density microelectrodes, new surgical implantation techniques, multi-channel signal processing, and the establishment of direct real-time brain-machine interfaces, hold promise not just for neurophysiology research, but also for new-generation prosthetic devices aimed at restoring mobility and communication skills in severely disabled patients. Extensively updated and expanded, *Methods for Neural Ensemble Recording, Second Edition* distills the current state-of-the-science and provides the nuts and bolts foundation from which to advance the field for the next ten years. With contributions from pioneering researchers, this second edition begins with an overview of microwire array design for chronic neural recordings. Demonstrating the diversity now enjoyed in the field, the book reviews new surgical techniques for chronic implantation of microwire arrays in not just rodents, but primates as well. It explores microelectrode microstimulation of brain tissue, discusses multielectrode recordings in the somatosensory system and during learning, and analyzes neural ensemble recordings from the central gustatory-reward pathways in

awake and behaving animals. An exploration of new strategies for neural ensemble data analysis for Brain-Machine Interface (BMI) applications foreshadows an investigation into employing BMI to restore neurological function. Using multielectrode field potential recordings, contributions define global brain states and propose conceptual and technical approaches to human neural ensemble recordings in the future.

### **The God Problem**

This book offers explanations about what the spiritual seeker will experience on their journey to higher level conscious awareness. It provides real life experiences from the author and his associates over the years as examples to guide others in understanding their own process to cognitive advancement.

### **Global Brain**

God's war crimes, Aristotle's sneaky tricks, Einstein's pajamas, information theory's blind spot, Stephen Wolfram's new kind of science, and six monkeys at six typewriters getting it wrong. What do these have to do with the birth of a universe and with your need for meaning? Everything, as you're about to see. How does the cosmos do something it has long been thought only gods could achieve? How does an inanimate universe generate stunning new forms and unbelievable new powers without a creator? How does the cosmos create? That's the central question of this book, which finds clues in strange places. Why  $A$  does not equal  $A$ . Why one plus one does not equal two. How the Greeks used kickballs to reinvent the universe. And the reason that Polish-born Benoît Mandelbrot—the father of fractal geometry—rebelled against his uncle. You'll take a scientific expedition into the secret heart of a cosmos you've never seen. Not just any cosmos. An electrifyingly inventive cosmos. An obsessive-compulsive cosmos. A driven, ambitious cosmos. A cosmos of colossal shocks. A cosmos of screaming, stunning surprise. A cosmos that breaks five of science's most sacred laws. Yes, five. And you'll be rewarded with author Howard Bloom's provocative new theory of the beginning, middle, and end of the universe—the Bloom toroidal model, also known as the big bagel theory—which explains two of the biggest mysteries in physics: dark energy and why, if antimatter and matter are created in equal amounts, there is so little antimatter in this universe. Called "truly awesome" by Nobel Prize-winner Dudley Herschbach, *The God Problem* will pull you in with the irresistible attraction of a black hole and spit you out again enlightened with the force of a big bang. Be prepared to have your mind blown. From the Hardcover edition.

### **That Time at the Zoo**

## **Principles of Brain Evolution**

This book presents a new view on the evolution of the brain, cognition, and emotion. Around a half-century ago, Professor Harry Jerison published a seminal book entitled *Evolution of the Brain and Intelligence*. Since then, there has been a series of dramatic methodological and conceptual changes which have led to many new insights into the understanding of brain evolution and cognition. This book is particularly focused on three significant aspects of such changes. First, taking advantage of a new integrated approach called evolutionary developmental biology or Evo/Devo, researchers have started to look into vertebrate brain evolution from the developmental perspective. Second, comparative neuroanatomists have accumulated a large amount of information about the brains of diverse animal groups to refute the old-fashioned idea that vertebrate brains evolved linearly from non-mammals to mammals. Third, comparative behavioral studies have demonstrated that sophisticated cognition and emotion are not unique to some primates but are also found in many non-primate and even non-mammalian species. This work will appeal to a wide readership in such fields as neuroscience, cognitive science, and behavioral science.

## **Global Brain Singularity**

The *Lucifer Principle* is a revolutionary work that explores the intricate relationships among genetics, human behavior, and culture to put forth the thesis that “evil” is a by-product of nature’s strategies for creation and that it is woven into our most basic biological fabric. In a sweeping narrative that moves lucidly among sophisticated scientific disciplines and covers the entire span of the earth’s, as well as mankind’s, history, Howard Bloom challenges some of our most popular scientific assumptions. Drawing on evidence from studies of the most primitive organisms to those on ants, apes, and humankind, the author makes a persuasive case that it is the group, or “superorganism,” rather than the lone individual that really matters in the evolutionary struggle. But, Bloom asserts, the prominence of society and culture does not necessarily mitigate against our most violent, aggressive instincts. In fact, under the right circumstances the mentality of the group will only amplify our most primitive and deadly urges. In Bloom’s most daring contention he draws an analogy between the biological material whose primordial multiplication began life on earth and the ideas, or “memes,” that define, give cohesion to, and justify human superorganisms. Some of the most familiar memes are utopian in nature—Christianity or Marxism; nonetheless, these are fueled by the biological impulse to climb to the top of the hierarchy. With the meme’s insatiable hunger to enlarge itself, we have a precise prescription for war. Biology is not destiny; but human culture is not always the buffer to our most primitive instincts we would like to think it is. In these complex threads of thought lies the *Lucifer Principle*, and only through understanding its mandates will we be able to avoid the nuclear crusades that await us in the twenty-first century.

## **Global Brain Awakens**

This book introduces readers to global brain singularity through a logical meditation on the temporal dynamics of the universal process. Global brain singularity is conceived of as a future metasystem of human civilization that represents a qualitatively higher coherence of order. To better understand the potential of this phenomenon, the book begins with an overview of universal history. The focus then shifts to the structure of human systems, and the notion that contemporary global civilization must mediate the emergence of a commons that will transform the future of politics, economics and psychosocial life in general. In this context the book presents our species as biocultural evolutionary agents attempting to create a novel and independent domain of technocultural evolution that affords us new levels of freedom. Lastly, the book underscores the internal depths of the present moment, structured by a division between subject and object. The nature of the interaction between subject and object would appear to govern the mechanics of a spiritual process that is key to understanding the meaning of singularity inclusive of observers. Given its scope, the book will appeal to readers interested in systems approaches to the emerging world society, especially historians, philosophers and social scientists.

## **The Origin of Mind**

Drawing on the views of scientists and philosophers, including Lovelock, Sheldrake, and Aurobindo, a psychologist argues that the mounting complexity of today's world may lead to the convergence of society into a single, global consciousness

## **Global Brain**

The evolution of the human brain and cognitive ability is one of the central themes of physical/biological anthropology. This book discusses the emergence of human cognition at a conceptual level, describing it as a process of long adaptive stasis interrupted by short periods of cognitive advance. These advances were not linear and directed, but were acquired indirectly as part of changing human behaviors, in other words through the process of exaptation (acquisition of a function for which it was not originally selected). Based on studies of the modern human brain, certain prerequisites were needed for the development of the early brain and associated cognitive advances. This book documents the energy and nutrient constraints of the modern brain, highlighting the significant role of long-chain polyunsaturated fatty acids (LC-PUFA) in brain development and maintenance. Crawford provides further emphasis for the role of essential fatty acids, in particular DHA, in brain development, by discussing the evolution of the eye and neural systems. This is an ideal book for Graduate students, post docs, research scientists in Physical/Biological Anthropology, Human Biology, Archaeology, Nutrition, Cognitive Science, Neurosciences. It is also an excellent selection for a grad student discussion seminar.

## **Globish the World Over**

### **Global Brain**

All Jack Falcone wants to do is be a veterinarian. While hoping to get into school he spends his mornings at the gym, days working at the zoo and his evenings studying. When Adam Buckminster, the man who just may hold the key to Jack's acceptance to school shows up at the gym and begins gaining impossible strength despite doing everything wrong, Jack's life suddenly starts down a spiral of improbable events. Only with the help of the massive Brock Steele and the self-proclaimed knight Wallace Claymore can Jack hope to get things back to normal. A witty, unbelievable romp through the streets of Buffalo, New York ensues that forces the trio to dance the magical line between science and myth.

### **The Global Brain**

"Geary also explores a number of issues that are of interest in modern society, including how general intelligence relates to academic achievement, occupational status, and income."--BOOK JACKET.

### **The Awakening Earth**

Boundaries is a disturbing story about the blurred lines between love and betrayal, freedom and control, fantasy and treachery, good and evil, past and future. Diane Alders is a successful, workoholic sales executive in the medical field who has a void in her heart as a result of the tragic death of her husband seven years ago. Mickey Rollins is a genius and entrepreneur about to introduce a revolutionary new therapy that will 'repair' injured or impaired brains. Their sputtering romance hits full speed when Mickey invites Diane to accompany him on a lavish and bizarre vacation to the exotic South Seas intended to stretch their senses, fulfill wild dreams, and bring them closer together. Disaster strikes, and it is Diane who becomes Mickey's first human test subject. There's a catch...the healing process requires a surrogate, and Mickey chooses their mutual friend, lover and temptress—the beautiful Suki. The resurrection of Diane that transpires is not only a transfer of physical and cerebral attributes, but a blending of relationships, feelings, and emotions, drawing many into the fray, ending as shockingly as it begins.

### **The Global Brain**

Creating Internet Intelligence is an interdisciplinary treatise exploring the hypothesis that global computer and

communication networks will one day evolve into an autonomous intelligent system, and making specific recommendations as to what engineers and scientists can do today to encourage and shape this evolution. A general theory of intelligent systems is described, based on the author's previous work; and in this context, the specific notion of Internet intelligence is fleshed out, in its commercial, social, psychological, computer-science, philosophical, and theological aspects. Software engineering work carried out by the author and his team over the last few years, aimed at seeding the emergence of Internet intelligence, is reviewed in some detail, including the Webmind AI Engine, a uniquely powerful Internet-based digital intelligence, and the Webworld platform for peer-to-peer distributed cognition and artificial life. The book should be of interest to computer scientists, philosophers, and social scientists, and more generally to anyone concerned about the nature of the mind, or the evolution of computer and Internet technology and its effect on human life.

### **Boundaries**

This book presents a new, detailed examination that explains how elegant brains have been shaped in evolution. It consists of 19 chapters written by academic professionals in neuroscience, opening with the origin of single-celled creatures and then introducing primordial types in invertebrates with the great abundance of the brains of vertebrates. Important topics are provided in a timely manner, because novel techniques emerged rapidly—as seen, for examples, in the next-generation sequencers and omics approaches. With the explosion of big data, neural-related genes and molecules is now on the radar. In fact, Europe's big science and technology projects, a €1 billion plan called the Human Brain Project and the Blue Brain Project to understand mammalian brain networks, have been launched in recent years. Furthermore, with the rise of recently advanced artificial intelligence, there is great enthusiasm for understanding the evolution of neural networks. The views from brain evolution in nature provide an essential opportunity to generate ideas for novel neuron- and brain-inspired computation. The ambition behind this book is that it will stimulate young scientists who seek a deeper understanding in order to find the basic principles shaping brains that provided higher cognitive functions in the course of evolution.

### **Human Brain Evolution**

The idea for this book predates not only my trilogy on colonial rebellion but my decision to produce the Reconsidering Chartism series. Its gestation began in 2003 with an off-hand comment by a student during a session on European influences on Chartism in the 1840s. She asked: 'what impact did Chartism have on the rest of the world?' I have spent the years since trying to find an answer and this has taken me in directions I could not have anticipated when it all began. Although much has been written about Chartism in Britain, though considerably less on Ireland, when I started work on this problem I quickly found that, apart from articles considering European influences on Chartism and on Chartism in Australia and a book on Chartists in the United States, this was not a question that had been the subject of serious consideration. The

opening chapters address this issue. The first examines the internationalism of Chartism something that was evident from the beginnings of the movement. Chapter 2 looks at the relationship between Chartism and events in Canada during the 1830s that led to the rebellions in the Canadas in 1837 and 1838 and the ways in which Scottish Chartism, in particular, had an impact on the politics of the Clear Grits of the early 1850s. This is followed by a chapter that explores Chartism and the Australian colonies especially NSW and Victoria during the 1840s and 1850s when, what were previously penal colonies, made the transition from rule by governors to democratic constitutions in which the People's Charter played an influential part. Chapter 4 draws this discussion together by asking just how far Chartism was a 'global force' in the mid-nineteenth century. The remainder of the book brings together issues that have been a frequent feature throughout the series. The ways in which historians have regarded Chartism have, since Gammage first wrote about it, been matters of disagreement and is considered in Chapters 5 and 6. There was persistent tension in working-class political movements in the first half of the nineteenth century over the relationship between familial and political concerns as ideas of masculinity and femininity shifted. The precise extent of women's participation in movements of protest is difficult to quantify and there is little sign of any formal involvement in politics before radical political reform revived, in London and provincial cities and in the northern textile districts after 1815. Women were not only part of the crowd but from the Queen Caroline affair in 1820 through to the 1850s had a particular role in radical politics, the subject of Chapter 7. Many of those who have commented on Chartism have pointed to leadership, or rather lack of it, as one of the reasons why it ultimately failed. Chapter 8 considers the nature of Chartist leadership and suggests that the traditional view of its ineffectiveness reflects an O'Connor focussed view and fails to consider the importance of local leadership or recognise the different sorts of 'leader' within the movement. Chapter 9 is an extensive revision of a paper on Chartism and the State originally composed in 2003. Chartists had little political muscle and, despite their mass support, were powerless when faced by the coercive power of the local and national states. The final chapter looks at how Chartism has been remembered and memorialised. For radicals, monuments were often less about consensus and more about building permanent symbols of defiance and opposition.

### **The Awakening Earth**

The solution is shown on page 239. Rest of the book is a step-by-step logical progression to the solution. Why? Last century has seen many crisis unfold, but the learning from them had not been applied to make our system, safer and secured. According to the author, the prevailing Financial Crisis resulted from a poor quality of information, running the global financial system. The author uses the 'information asymmetry' and 'information lifecycle' to put forth his argument. As this book extracts learning from this crisis, it explains how financial sector and other businesses can apply the concept of 'High Quality of Information' to run a 'crisis-proof- business. In this book, the author constructs the global financial architecture, that can resist crises in future. So, are we more wiser, living through the current crisis? What can the non-financial sector learn from this crisis? Make an assessment for yourself, using the C(X)O checklist at the end of the book.

## Chartism

As someone who has spent forty years in psychology with a long-standing interest in evolution, I'll just assimilate Howard Bloom's accomplishment and my amazement.-DAVID SMILLIE, Visiting Professor of Zoology, Duke University In this extraordinary follow-up to the critically acclaimed *The Lucifer Principle*, Howard Bloom-one of today's preeminent thinkers-offers us a bold rewrite of the evolutionary saga. He shows how plants and animals (including humans) have evolved together as components of a worldwide learning machine. He describes the network of life on Earth as one that is, in fact, a "complex adaptive system," a global brain in which each of us plays a sometimes conscious, sometimes unknowing role. and he reveals that the World Wide Web is just the latest step in the development of this brain. These are theories as important as they are radical. Informed by twenty years of interdisciplinary research, Bloom takes us on a spellbinding journey back to the big bang to let us see how its fires forged primordial sociality. As he brings us back via surprising routes, we see how our earliest bacterial ancestors built multitrillion-member research and development teams a full 3.5 billion years ago. We watch him unravel the previously unrecognized strands of interconnectedness woven by crowds of trilobites, hunting packs of dinosaurs, feathered flying lizards gathered in flocks, troops of baboons making communal decisions, and adventurous tribes of protohumans spreading across continents but still linked by primitive forms of information networking. We soon find ourselves reconsidering our place in the world. Along the way, Bloom offers us exhilarating insights into the strange tricks of body and mind that have organized a variety of life forms: spiny lobsters, which, during the Paleozoic age, participated in communal marching rituals; and bees, which, during the age of dinosaurs, conducted collective brainwork. This fascinating tour continues on to the sometimes brutal subculture wars that have spurred the growth of human civilization since the Stone Age. Bloom shows us how culture shapes our infant brains, immersing us in a matrix of truth and mass delusion that we think of as reality. *Global Brain* is more than just a brilliantly original contribution to the ongoing debate on the inner workings of evolution. It is a "grand vision," says the eminent evolutionary biologist David Sloan Wilson, a work that transforms our very view of who we are and why.

## Methods for Neural Ensemble Recordings, Second Edition

How the global mind drives the evolution of both consciousness and civilization • Explains how our brains receive consciousness from the global mind, which upgrades human consciousness according to a pre-set divine time frame • Reveals how the Mayan Calendar provides a blueprint for these consciousness downloads throughout history • Examines the mind shift in humans and the development of pyramids and civilization in ancient Egypt, Sumer, South America, and Asia beginning in 3115 BCE In each culture the origins of civilization can be tied to the arising of one concept in the human mind: straight lines. Straight and perpendicular lines are not found in nature, so where did they come from? What shift in consciousness occurred around the globe that triggered the start of rectangular building methods and linear organization as

well as written language, pyramid construction, mathematics, and art? Offering a detailed answer to this question, Carl Calleman explores the quantum evolution of the global mind and its holographic resonance with the human mind. He examines how our brains are not thinking machines but individual receivers of consciousness from the global mind, which creates holographic downloads to adjust human consciousness to new cosmological circumstances. He explains how the Mayan Calendar provides a blueprint for these downloads throughout history and how the global mind, rather than the individual, has the power to make civilizations rise and fall. He shows how, at the beginning of the Mayan 6th Wave (Long Count) in 3115 BCE, the global mind gave human beings the capacity to conceptualize spatial relations in terms of straight and perpendicular lines, initiating the building of pyramids and megaliths around the world and leading to the rise of modern civilization. He examines the symbolism within the Great Pyramid of Giza and the pyramid at Chichén Itzá and looks at the differences between humans of the 6th Wave in ancient Egypt, Sumer, South America, and Asia and the cave painters of the 5th Wave. He reveals how the global mind is always connected to the inner core of the Earth and discusses how the two halves of the brain parallel the civilizations of the East and West. Outlining the historical, psychological, geophysical, and neurological roots of the modern human mind, Calleman shows how studying early civilizations offers a means of understanding the evolution of consciousness.

### **GLOBAL BRAIN CHIP & MESOGENS**

In this extraordinary follow-up to the critically acclaimed *The Lucifer Principle*, Howard Bloom--one of today's preeminent thinkers offers us a bold rewrite of the evolutionary saga. As someone who has spent forty years in psychology with a long-standing interest in evolution, I'll just assimilate Howard Bloom's accomplishment and my amazement. David Smillie, Visiting Professor of Zoology, Duke University. He shows how plants and animals (including humans) have evolved together as components of a worldwide learning machine. He describes the network of life on Earth as one that is, in fact, a complex adaptive system, a global brain in which each of us plays a sometimes conscious, sometimes unknowing role, and he reveals that the World Wide Web is just the latest step in the development of this brain. We watch him unravel the previously unrecognized strands of interconnectedness woven by crowds of trilobites, hunting packs of dinosaurs, feathered flying lizards gathered in flocks, troops of baboons making communal decisions, and adventurous tribes of protohumans spreading across continents but still linked by primitive forms of information networking. We soon find ourselves reconsidering our place in the world. Along the way, Bloom offers us exhilarating insights into the strange tricks of body and mind that have organized a variety of life forms: spiny lobsters, which, during the Paleozoic age, participated in communal marching rituals; and bees, which, during the age of dinosaurs, conducted collective brainwork.

This fascinating tour continues on to the sometime brutal subculture wars that have spurred the growth of human civilization since the Stone Age. Bloom shows us how culture shapes our infant brains, immersing us in a matrix of truth and mass delusion that we think of as reality. Global Brain is more than just a brilliantly original contribution to the ongoing debate on the inner workings of evolution. It is a grand vision, says the eminent evolutionary biologist David Sloan Wilson, a work that transforms our very view of who we are and why.

### **Judy**

At this unprecedented moment in history, when escalating crises threaten all life on earth, internationally renowned physicist and futurist Peter Russell weaves together the physical and social sciences, modern technology, and ancient mysticism to demonstrate that the possibility of global illumination is now as real -- and as imminent -- as the threat of mass annihilation.

### **The Global Financial Crisis Is Not Financial**

What's Your Green Goldfish is based on the simple premise that employees are the key drivers of customer experience and that "Happy Employees Create Happy Customers." The book focuses on 15 different ways to drive employee engagement and reinforce a strong corporate culture. It's the second book in the goldfish trilogy. The first book was an Amazon Best Seller entitled, What's Your Purple Goldfish. Purple focused on customers, whereby Green focuses on employees. Both books are based on a revolutionary new approach called marketing g.l.u.e. (marketing by giving little unexpected extras). The book is based on the findings of the Green Goldfish Project, an effort which crowd sourced 1,001 examples of signature added value for employees. Key themes emerged from the Project. The book is filled with over 200 examples. PRAISE FOR WHAT'S YOUR GREEN GOLDFISH "Stan is the sherpa that guides executives along the journey between the heart and mind of business stakeholders. Stakeholders aren't always customers though. At a time when company vision and culture matters more than ever, it takes inspired and engaged employees to bring them to life." - Brian Solis, author of What's the Future of Business #WTF, The End of Business as Usual and Engage "So often overlooked, and so very vital to building company value empowering employees to support each other and the brand. Stan Phelps 'gets' it and Green Goldfish will walk you step-by-step though achieving this critical goal." - Ted Rubin, author of Return on Relationship "Great customer centric organizations only exist because of engaged and empowered employees. The Green Goldfish is packed with awesome examples of what world class companies are doing today to inspire and reward their employees. If you see value in truly building an "A Team," Green Goldfish will be, without question, your single best reference." - Chris Zane, Founder and President of Zane's Cycles, author of Reinventing the Wheel, the Science of Creating Lifetime Customers "Stan Phelps takes customer service to a whole new level by focusing on EMPLOYEE service, and how to do well by your employees - so

they take care of your customers. Packed with stories, insights and R.U.L.E.S. any company can follow, this book is a must-read for managers of companies of all shapes and sizes who know that employees don't leave jobs - they leave managers, especially when they don't feel your love and appreciation. Pick this up, and start engaging your team and making more GREEN - Phil Gerbyshak, author of The Naked Truth of Social Media "Our large-scale research shows unequivocally that engaged employees are more likely to work longer, try harder, make more suggestions for improvement, recruit others to join their company, and go out of their way to help customers. They even take less sick time. Companies can tap into the enormous value of engaged employees by following the 15 ideas that Stan lays out in this book." - Bruce Temkin, author of The Six Laws of Customer Experience "Too often, the actual employment experience delivered on the job does not measure up to the version sold to job candidates during the interview process. In What's Your Green Goldfish, Stan Phelps offers 15 ways to close the gap." - Steve Curtin, author of Delight Your Customers: 7 Simple Ways to Raise Your Customer Service from Ordinary to Extraordinary (AMACOM, June 2013) "In What's Your Green Goldfish, Stan Phelps brilliantly applies the idea of 'doing a little something extra' for employees. You know, those people that actually get the work done and keep customers happy. Read it, put some of the ideas to work, and soon you'll be reaping more 'green' from your customers." - Bob Thompson, Founder and CEO, CustomerThink Corp.

### **Promptings**

Join Clair and her family on an adventure to the Zoo. Sing along as Clair learns that trying new things is lots of fun!!

### **Exam Prep for: Global Brain; The Evolution of Mass Mind**

At this unprecedented moment in history, when escalating crises threaten all life on earth, internationally renowned physicist and futurist Peter Russell weaves together the physical and social sciences, modern technology, and ancient mysticism to demonstrate that the possibility of global illumination is now as real -- and as imminent -- as the threat of mass annihilation.

### **The Global Brain**

There was a plum-tree in the orchard, all snow and ebony against a sky of sapphire. Becky Sharp, perched among the fragrant blossoms, crooned soft nothings to herself. Under the tree little Anne lay at full length on the tender green sod and dreamed

### **The 21st Century Singularity and Global Futures**

Originally published in 1982 *The Awakening Earth* explores the idea of the Earth as a collective, self-regulatory living organism, and considers in this context, the function of the human race. The book provides an exploration of humanity's potential and explores the possibility of mankind's evolutionary future. Drawing on the work of physicists, psychologists, philosophers and mystics, the book argues that humanity is on the verge of another evolutionary leap and explores evolution in the context of spiritual growth, arguing that widespread inner awakenings could lead to a more analogous society, functioning as a single social super-organism, much in the way cells in a body function as a biological organism.

### **Healing the Vestigial Heart**

'Full of historical anecdotes . . . but this is much more than a history book. [George Dyson] weaves his threads together for a purpose. Using voices of the past and present, he describes a fresh and sometimes startling viewpoint of the emerging relationship between nature and machines. From vignettes about Olaf Stapledon, George Boole, John von Neumann, and Samuel Butler, a larger story develops in which the twin processes of intelligence and evolution are inseparably intertwined' Danny Hillis, *Wired*

### **Quantum Shift in the Global Brain**

I suspect that if you are reading this book, then you either just finished your book or you are contemplating self-publishing books as a full-time or part-time income or just to publish your book and brag to your friends about it later. In any case, this book is written for you and it comes from my heart, and from my many trial and errors over the last two years and still am doing today. I hope I will not let you down with the content of this book and that you will find it useful.

### **Evolution of the Brain, Cognition, and Emotion in Vertebrates**

It has been predicted by Computer Scientist that within the next twenty years neural interfaces will be designed that will not only increase the power of the humans senses that includes the enhancement of memory and enable one to have a "cyberlink" - invisible (wireless) communication with others. There will be a tremendous ethical burden placed upon all of humanity to evaluate the comprehensive issues of safety, informed consent, manufacturer's and scientific communities global responsibility as well as the future for the implanted being. A time for the reflection of what is the term "Doing No Harm" really mean to mankind as issues of privacy and autonomy become a focal point of life as well as carcinogenic agents entering the brain. *Global Brain Chip and Mesogens* by Dr. Hildegard Staninger(r), RIET-1 documents the scientific investigation process of chemical analysis and advanced materials compositions in determining the chemical finger print of a Brain Chip. A first of its kind as it will become the pioneering text on this subject matter. Dr. Hildegard Staninger is an

Industrial Toxicologist/IH and Doctor of Integrative Medicine. She has authored other books and articles in the applied sciences and engineering, occupational health and safety, and environment as well as the creative arts and educational study guides for occupational certification programs."

### **Creating Internet Intelligence**

Aimed at advanced undergraduate and graduate students, this textbook describes some of the basic principles affecting brain evolution. The author refers to data from a wide array of vertebrates while minimizing technical jargon. Particular attention has been paid to the ways in which changes in brain structure impact function and behavior. The volume concludes with a discussion on how mammal brains diverged from other brains and how Homo sapiens evolved a very large and special brain.

### **The Global Brain Awakens**

Do you frequently find yourself asking, "Why?" This book will, prayerfully, prompt you to see God acting in every circumstance in your life, from the mundane to the monumental; to appreciate that the Creator does, indeed, cause "all things [to] work for good to them that love God, to them who are called according to His purpose." (Romans 8:28) Through prose and poems based on personal experiences, the author shares pieces of her journey through faith-building events. If you have trouble focusing on God and His agenda, this book will sharpen your vision and lead you to reconsider God's purpose for the events in which you may find yourself involved on a daily basis.

### **Publish Your Book in Kindle Amazon Under 60 Minutes.**

This book introduces a 'Big History' perspective to understand the acceleration of social, technological and economic trends towards a near-term singularity, marking a radical turning point in the evolution of our planet. It traces the emergence of accelerating innovation rates through global history and highlights major historical transformations throughout the evolution of life, humans, and civilization. The authors pursue an interdisciplinary approach, also drawing on concepts from physics and evolutionary biology, to offer potential models of the underlying mechanisms driving this acceleration, along with potential clues on how it might progress. The contributions gathered here are divided into five parts, the first of which studies historical mega-trends in relation to a variety of aspects including technology, population, energy, and information. The second part is dedicated to a variety of models that can help understand the potential mechanisms, and support extrapolation. In turn, the third part explores various potential future scenarios, along with the paths and decisions that are required. The fourth part presents philosophical perspectives on the potential deeper meaning and implications of the trend

towards singularity, while the fifth and last part discusses the implications of the Search for Extraterrestrial Intelligence (SETI). Given its scope, the book will appeal to scholars from various disciplines interested in historical trends, technological change and evolutionary processes.

### **One More**

The shift from scientific materialism to a multidimensional worldview in harmony with the world's great spiritual traditions • Articulates humanity's critical choice--to be the last decade of an outgoing, obsolete world, or the first of a new and viable one • Presents a new "reality map" to guide us through the environmental, scientific, and geopolitical upheavals we are experiencing Our world is in a Macroshift. The reality we are experiencing today is a substantially new reality--climate change, global corporations, industrialized agriculture--challenging us to change with our rapidly changing world, lest we perish. In this book, Ervin Laszlo presents a new "reality map" to guide us through the world shifts we are experiencing--the problems, opportunities, and challenges we face individually as well as collectively--in order to help us understand what we must do during this time of great transition. Science's cutting edge now views reality as broader, as multiple universes arising in a possibly infinite meta-universe, as well as deeper, extending into dimensions at the subatomic level. Laszlo shows that aspects of human experience that had previously been consigned to the domain of intuition and speculation are now being explored with scientific rigor and urgency. There has been a shift in the materialistic scientific view of reality toward the multidimensional worldview of multiple interconnected realities long known by the world's great spiritual traditions. By understanding the interconnectedness of our changing world as well as our changing "map" of the world, we can navigate with insight, wisdom, and confidence.

### **Darwin Among the Machines**

"I must congratulate you on GLOBISH THE WORLD OVER. It's a pioneering text of great importance, full of enthralling insights for native and non-native English users alike." -- Robert McCrum, author, The Story of English and Literary Editor, London Observer. Globish, as a concept, takes to task the world hegemony of arrogant English-speakers. Hence the landmark book Don't Speak English - Parlez Globish became a best-seller in French, and other languages, but it never appeared in English. GLOBISH THE WORLD OVER is the first book written in Globish-English. Non-native English speakers from non-Anglophone countries use English better between themselves than with any native English speaker. Globish codifies their very efficient "similar limitations." The word Globish may strike English-speakers as an "odd" way to rename their English. However billions of speakers in Brazil, Russia, India and China will be the new "owners" of what the world is now calling Globish. The implications are far-reaching. GLOBISH THE WORLD OVER discusses this phenomenon, and demonstrates that Globish - as a deliberate and sufficient subset of English for international communication - is limited

more by a person's communication ability than by mere words.

### **Navigating Into the Second Cognition**

Introduces the controversial theory of "group selection" in which all life on earth is portrayed as a macro-community of symbiotic organisms working together for the benefit of all. By the author of The Lucifer Principle.
