Principles of Operations Management

Computer-based systems have become omnipresent commodities within our environment. While for a large variety of these systems such as transportation systems, nuclear or chemical plants, or medical systems their relation to safety is obvious, we often do not reflect that others are as directly related to risks concerning harm done to persons or matter as, for example, elevator control or mobile phones. At least we are not aware of the risk in our daily use of them.

Safecomp as a community and a conference series has accompanied this development for 30 years up to Safecomp 2009, which was the 28th of the series. During this time the topics and methods as well as the community have undergone changes. These changes reflect the requirements of the above-mentioned ubiquitous presence of safety-related systems. Safecomp has always encouraged and will further encourage academia and industry to share and exchange their ideas and experiences. After 30 years, we as the organizers of Safecomp 2009, found it imperative to take stock: which methods found their way into the application areas; which new approaches need to be checked for their practical applicability. As different application domains developed their own approaches over the previous decades, we tried to attract people with different backgrounds for this conference. - though the years 2008 and 2009 were not easy with regard to the overall global economic situation, we succeeded with this goal.

The first comprehensive resource on CRP--a powerful new way to assess heart attack risk Half of all heart attacks and strokes occur in people with normal cholesterol levels--a phenomenon that has long baffled doctors. C-Reactive Protein, or CRP, is a newly discovered measure of inflammation in the body that some researchers believe is twice as important as cholesterol in predicting one's risk of heart disease. C-Reactive Protein is the first comprehensive consumer book on the subject. CRP is quickly becoming a hot topic in the media, and public awareness about CRP is growing. The American Heart Association and the Centers for Disease Control now recommend that some 40 million Americans have their CPR levels tested as part of their regular physical. Written by an awardwinning cardiologist, this book explains what CRP means to one's health and shows readers step-by-step

Have U.S. military personnel experienced health problems from being exposed to Agent Orange, its dioxin contaminants, and other herbicides used in Vietnam? This definitive volume summarizes the strength of the evidence associating exposure during Vietnam service with cancer and other health effects and presents conclusions from an expert panel. Veterans and Agent Orange provides a historical review of the issue, examines studies of populations, in addition to Vietnam veterans, environmentally and occupationally exposed to herbicides and dioxin, and discusses problems in study methodology. The core of the book presents What is known about the toxicology of the herbicides used in greatest quantities in Vietnam. What is known about assessing exposure to herbicides and dioxin. What can be determined from the wide range of epidemiological studies conducted by different authorities. What is known about the relationship between exposure to herbicides and dioxin, and cancer, reproductive effects, neurobehavioral disorders, and other health effects. The book describes research areas of continuing concern and offers recommendations for further research on the health effects of Agent Orange exposure among Vietnam veterans. This volume will be critically important to both policymakers and physicians in the federal government, Vietnam veterans and their families, veterans organizations, researchers, and health professionals.
