Tracheal intubation (usually simply referred to as intubation), an invasive medical procedure, is the placement of a flexible plastic catheter into the trachea. For millennia, tracheotomy was considered the most reliable (and most risky) method of tracheal intubation. By the late 19th century, advances in the sciences of anatomy and physiology, as well as the beginnings of an appreciation of

Indeed, filling in the gaps in our knowledge of more mundane things like nodal anatomy, cell and tissue distributions, stomatal morphology, seed coat anatomy, and the like can be quite easy (see also below) and will clarify our understanding of evolution. Much effort must continue to be spent in summarizing characters of well-established clades

Get rid of those pesky squirrels with the Tube Trap. Used either baited or non-baited, the Tube Trap is a natural attractant to squirrels wanting to run through it or hide in it. Once the squirrel reaches the pan in the middle of the trap, the double torsion spring is triggered. When a capture is made, the squirrel is generally hidden from public view. The trap features a safety hook, is

In anatomy, the mandible, lower jaw or jawbone is the largest, strongest and lowest bone in the human facial skeleton. It forms the lower jaw and holds the lower teeth in place. The mandible sits beneath the maxilla. It is the only movable bone of the skull (discounting the ossicles of the middle ear). It is connected to the temporal bone by the temporomandibular joint.
