The Blue Book Building and Construction

Sustainable Landscape Construction

D&B Million Dollar Directory

Offers practical strategies to help people live green at home, explaining how they can cut energy costs and consumption by changing the way they heat, cool, light, and fill their homes.

Los Angeles Lawyer

Headquarters USA 2008

Documents the disastrous 1990s mission during which two members of a five-man

diving team were killed while completing construction on a ten-mile tunnel at the end of Boston's Deer Island waste treatment plant.

Sustainable Industries Journal

Sustainable Landscape Construction re-evaluates the assumption that all built landscapes are environmentally sound, and offers practical, professional alternatives for more sustainable landscape construction, design, and maintenance. Packed with clear concepts and never-before-compiled resources on "green" landscape work, the book is an inspiring overview of important practices and concerns. Organized around ten key principles of sustainability, the book offers specific methods that can help accomplish those principles. Techniques and materials of landscape construction -- both alternative and conventional -- are evaluated, using criteria such as energy savings or non-toxicity and renewability in manufacture. Topics covered include: keeping healthy sites healthy constructing for and with plants working with a site's water regime reducing the impacts of paving using local, salvaged, or recycled materials estimating energy costs over time respecting the need for darkness and quiet evaluating the resource costs of conventional landscape maintenance and more More than 100 projects from around the world are described and illustrated, proving that sustainable methods are viable today -- economically, functionally, and aesthetically. The book's extensive lists of resources for further information are an invaluable tool for implementing the ideas discussed, and for adapting them to local and regional conditions. Sustainable Landscape Construction will be an important complement to basic landscape construction texts, and is a one-of-a-kind reference for professionals in landscape architecture, construction, and maintenance; students in landscape construction and related design courses; and landowners, community groups, and others concerned with the health of specific sites.

"Green buildings" that slash energy use and carbon emissions are all the rage, but they aren't enough. The hidden culprit is embodied carbon—the carbon emitted when materials are mined, manufactured, and transported—comprising some ten percent of global emissions. With the built environment doubling by 2030, buildings are a carbon juggernaut threatening to overwhelm the climate. It doesn't have to be this way. Like never before in history, buildings can become part of the climate solution. With biomimicry and innovation, we can pull huge amounts of carbon out of the atmosphere and lock it up as walls, roofs, foundations, and insulation. We can literally make buildings out of the sky with a massive positive

impact. The New Carbon Architecture is a paradigm-shifting tour of the innovations in architecture and construction that are making this happen. Office towers built from advanced wood products; affordable, low-carbon concrete alternatives; plastic cleaned from the oceans and turned into building blocks. We can even grow insulation from mycelium. A tour de force by the leaders in the field, The New Carbon Architecture will fire the imagination of architects, engineers, builders, policy makers, and everyone else captivated by the possibility of architecture to heal the climate and produce safer, healthier, and more beautiful buildings. Bruce King, a structural engineer for thirty-five years, is Founder and Director of the Ecological Building Network (EBNet) and author of Buildings of Earth and Straw, Making Better Concrete, and Design of Straw Bale Buildings. He lives in San Rafael, California.

Construction Estimating

Transforming outdoor space is one of the hottest home trends today. Landscaping expands living space square footage, makes a property more usable, and keeps homeowners healthier whether they grow vegetables or swim laps. It also makes a neighborhood more aesthetically attractive and community minded. The Garden Bible can help homeowners understand the challenges of their outdoor space and what they need to do to create their garden and make it thrive. Photographed in rich full-color, this book will teach you how to develop a master plan for your yard. Many garden books explain how to grow specific flowers, care for shrubs, trees and lawn, and construct fences and hardscape. None take a homeowner from the beginning of the process: how to ask a professional the right questions, how to develop a budget, and how to identify and troubleshoot the challenges of their yard—drainage, erosion, privacy, noise, wind, too much or too little sun or shade. The Garden Bible will help you plan and problem solve so that your garden will grow, evolve, and be sustainable for years to come. Few books delve into landscaping style and cost-saving solutions as this insightful, beautifully illustrated book does. Barbara Ballinger, a well-known real estate, design and garden writer for more than four decades, and Michael Glassman, an award-winning landscape designer for over 35 years and author of seven books on landscape design and gardening, guide you through the process of designing your perfect garden. Showcasing the stories of how almost 30 home owners designed, budgeted and built their landscapes—The Garden Bible shows you that not only is a great garden beautiful to look at, but it's also great for the soul.

This easy-to-understand pocket guide was developed by a real-world contractor who has perfected the art of construction estimating! The DEWALT Construction Estimating Professional Reference is a great resource to learn how to successfully bid on a variety of construction projects. Chock-full of practical advice based on the author's real-life experience in bidding countless construction jobs, this reference explores such key topics as forms and checklists, subcontractors and suppliers, procedures, trade evaluation, costs, profit, and overheads, and much more! Check out our app, DEWALT® Mobile Pro(tm). This free app is a construction calculator with integrated reference materials and access to hundreds of additional calculations as add-ons. To learn more, visit dewalt.com/mobilepro.

A revolutionary, collaborative approach to design and construction project delivery Integrated Project Delivery is the first book-length discussion of IPD, the emergent project delivery method that draws on each stakeholder's unique knowledge to address problems before they occur. Written by authors with over a decade of research and practical experience, this book provides a primer on IPD for architects, designers, and students interested in this revolutionary approach to design and construction. With a focus on IPD in everyday operation, coverage includes a detailed explanation and analysis of IPD guidelines, and case studies that show how real companies are applying these guidelines on real-world projects. End-of-chapter questions help readers quickly review what they've learned, and the online forum allows them to share their insights and ideas with others who either have or are in the process of implementing IPD themselves. Integrated Project Delivery brings together the owners, architect, engineers, and contractors early in the development stage to ensure that problems are caught early, and to address them in a collaborative way. This book describes the parameters of this new, more efficient approach, with expert insight on real-world implementation. Compare traditional procurement with IPD Understand IPD guidelines, and how they're implemented Examine case studies that illustrate everyday applications Communicate with other IPD adherents in the online forum The IPD approach revolutionizes not only the workflow, but the relationships between the stakeholders - the atmosphere turns collaborative, and the team works together toward a shared goal instead of viewing one another as obstructions to progress. Integrated Project Delivery provides a deep exploration of this approach, with practical guidance and expert insight.
