This is a definitive natural history of the Gower Peninsula, located to the south west of Swansea and often described as Wales in miniature. The area is unique in terms of the variety of the habitats and species that occur within its 188 square kilometres. As a result, it has a greater diversity of conservation designations than almost anywhere else in the UK. The natural history of Gower is like most parts of the British Isles - inextricably linked to the activities of man across many thousand years. In his study, Jonathan Mullard uses the evolving landscape and the effect that the associated changes have had on species and habitats as its core. The culmination of years of research and rich with the latest information and full colour illustrations, "Gower" is a valuable source of information on this diverse and fascinating area.

Natural pine forests characterize many landscapes preserved over time, either as a result of a specific forest management practice or a disturbance. In the event of a lack of management over a long period of time, these formations could evolve with increasingly chaotic structures towards other formations. This process can lead to landscape change, the spread of insects and pathogens, and the risk of fires and watercourse obstruction. Pine forest plantations should be considered as transient tree populations, destined to evolve into more complex and stable formations. However, sometimes they should be preserved for their cultural value. Careful management of these forests also takes into account the close relationship between forest and human settlements. As a first step, ecological management assumes the definition of these two macro types. These approaches include the application of integrated methods for determining the reference conditions of the main functional and structural ecosystem components of forests. The reference conditions are the historical (or natural) variability range of ecological structures and processes, reflecting the recent evolution and dynamic interaction of biotic and abiotic conditions and patterns of disturbance. These conditions form the basis for comparison with contemporary ecosystem processes and structures and are a frame of reference for designing ecological restoration treatments and conservation plans. The productive aspects must not be overlooked; rather, they have to be considered, planned, and managed with a perspective of sustainability and ecosystem functionality. This should be considered for a common approach to forest management, for a forest rehabilitation, and for forest restoration activities.

Make Your Own Diagnostic Equipment (MYODE) This book, "Make Your Own Diagnostic Equipment" came about from the need of many readers and viewers to be able to make and maintain fairly simple diagnostic gadgets. It is meant to show and guide the professional technician and DIY mechanic on how to make these gadgets. In many cases, due to the nature of the equipment industry, it is very expensive or virtually impossible to get these tools. The reason being is that often times tool makers don't see a profit in making these simple but effective gadgets. Most, if not all of these tools, are invaluable in diagnosing modern automotive systems. You can estimate that having one of these tools, at the right time when needed, will cut your diagnostic time by at least 50%. Of course, knowing how to use it is also important. However, by definition if you've already studied how the gadget works, how to build it and also ended up building it yourself, you've already passed the learning curve and chances are you'll know how to use it. At the very least, reading this book will put you in a much better position to also assess diagnostic issues and on the use of other important tools of automotive diagnostics. It is our hope with this work to enlighten the professional and DIY mechanic on the use, construction and operation of modern automotive diagnostic gadgets. Use this information to the best of your abilities and be on the diagnostic driver seat.

The Four Stroke Dirt Bike Engine Building Handbook

The Chinese are inordinately proud of having invented, among a whole host of other things, the compass (without which the world would have got lost), paper (without which books would not exist), the printing press (ditto), porcelain (no pretty matching chinaware), silk (no decadence), pasta (what would the Italians eat?), the wheelbarrow (how would civilisation have fared without it?) and the bristle toothbrush. A guide to understanding the Chinese which dispels or confirms preconceived prejudices with humor and insight.
