Mathematical Recreations and Problems of Past and Present Times

The first half of the second edition of Precalculus: An Investigation of Functions. This is an open textbook, available free online. This first portion of the book (Chapters 1-4) is an investigation of functions, exploring the graphical behavior of, interpretation of, and solutions to problems involving linear, polynomial, rational, exponential, and logarithmic functions. An emphasis is placed on modeling and interpretation, as well as the important characteristics needed in calculus.

"The text is suitable for a typical introductory algebra course, and was developed to be used flexibly. While the breadth of topics may go beyond what an instructor would cover, the modular approach and the richness of content ensures that the

book meets the needs of a variety of programs."--Page 1.

APC CBSE Mathematics - Class 11 - Avichal Publishing Company - Hints and Solutions

Precalculus 1

CBSE Mathematics, for class 11, has been written by Mr. M.L. Aggarwal (Former Head of P.G. Department of Mathematics, D.A.V. College, Jalandhar) strictly according to the latest syllabus prescribed by the CBSE, New Delhi. The book has been thoroughly revised and a new feature - Typical Illustrative Examples and Typical Problems, has been added in some chapters for those students who want to attempt some more challenging problems. The question of NCERT Exemplar Problems have also been included. Value Based Questions have also been added at the appropriate places. The book provides Hints & Solutions for the exercises of each chapter, at the end of the corresponding chapter.

Permutations and Combinations, 8. Binomial Theorem, 9. Sequences and Series, 10. Straight Lines, 11. Conic Sections, 12. Introduction to Three-Dimensional Geometry, 13. Limits and Derivatives, 14. Mathematical Reasoning, 15. Statistics, 16. Probability.

Solutions of the Problems and Riders Proposed in the Senate-house Examination

This new and expanded edition is intended to help candidates prepare for entrance examinations in mathematics and scientific subjects, including STEP (Sixth Term Examination Paper). STEP is an examination used by Cambridge Colleges for conditional offers in mathematics. They are also used by some other UK universities and many mathematics departments recommend that their applicants practice on the past papers even if they do not take the examination. Advanced Problems in Mathematics bridges the gap between school and university mathematics, and prepares students for an undergraduate mathematics course. The questions analysed in this book are all based on past STEP questions and each question is followed by a comment and a full solution. The comments direct the reader's attention to key points and put the question in its true mathematical context. The solutions point students to the methodology required to address advanced mathematical problems critically and independently. This book is a must

read for any student wishing to apply to scientific subjects at university level and for anyone interested in advanced mathematics. THE SOLUTIONS OF GEOMETRICAL PROBLEMS

This Elibron Classics title is a reprint of the original edition published by Macmillan and Co. in Cambridge, 1854.

Proceedings of the Edinburgh Mathematical Society

This book contains a reasonable collection of problems on hyperbolas represented by binary quadratic Diophantine equations. From the integer solutions of each of the above equations, the relations among special polygonal numbers are obtained. The formal prerequisites for the material are minimal. It is hoped that these problems may create an interest in the hearts of researchers and lovers of mathematics who approach it with pure love for its beauty. There is no wonder that binary quadratic Diophantine equations in connection with polygonal numbers are beautiful and tricky enough to keep a mathematician occupied for entire life.
