Sizewell B Power Station

Proceedings - Institution of Civil Engineers

This biographical reference work looks specifically at the lives, works and careers of those individuals involved in civil engineering whose careers began before 1830.

Charter, Supplemental Charters, By-laws, and List of Members of the Institution of Civil Engineers

The first history of the Institution of Civil Engineers to be illustrated in colour looks at the development of the profession over nearly 200 years and includes biographies of some of the greatest engineers who made these changes possible, charting the successes of construction from the great engineering advances of Victorian times to the Channel Tunnel Rail Link. A fascinating and informative read for all those interested in the history of ICE and how it has grown as well as the civil engineering industry and its impact on the world in which we live.

Proceedings of the Institution of Civil Engineers

The Channel Tunnel

Charter, bye-laws, and list of members

The award-winning -u2 billion Sizewell B nuclear power station on the Suffolk coast north east of Ipswich is the UK's first pressurized water reactor (PWR) electricity generation plant. Completed in 1995 it set new design and safety standards for PWR stations and has become a model for future PWR developments both in the UK and overseas. Compared with US designs the Sizewell B reactor design has 10 per cent thicker primary containment and a further 300mm thick secondary containment dome. The five refereed papers in this special issue of ICE Proceedings are written by senior members of the project team and cover the planning, design and construction of the power station together with its 56 m deep diaphragm cut-off wall and 900 m immersed tube cooling water tunnels.

Charter, Supplemental Charters, By-laws, and List of Members of the Institution of Civil Engineers

This book is an account of the oldest engineering institution in the world. It covers the history from the first meetings at the Kendal coffee house in Fleet Street in 1818 to the acquisition of numbers one to seven Great George Street and beyond. Whatever aspect of Institution life is being discussed, it is set in its wider context. After all, civil engineering affects everyone's life in obvious and direct ways, and the history of the ICE is inextricably bound with one of the greatest periods in

British society. In many ways this book is the story of the men who shaped our world.

Transactions of the Institution of Civil Engineers of Ireland

The €2 billion Lesotho Highlands Water Project ranks among the largest civil engineering projects in the world. This text describes the critical phase which will supply 18 cubic miles of water to the industrial heartland of South Africa, and generate 72 MW of electricity to Lesotho.

The GBP1.2 billion Cairo Wastewater Project was designed to remove water from one of the world's largest and fastest growing cities and treat it to a standard permitting re-use for agriculture. This issue of ICE Proceedings contains nine refereed papers that cover various aspects of the planning, design, construction and management of the project.
