The Survey of Income and Program Participation (SIPP) is a national, longitudinal household survey conducted by the Census Bureau. SIPP serves as a tool to evaluate the effectiveness of government-sponsored social programs and to analyze the impacts of actual or proposed modifications to those programs. SIPP was designed to fill a need for data that would give policy makers and researchers a much better grasp of how effectively government programs were reaching their target populations, how participation in different programs overlapped, and to what extent and under what circumstances people transitioned into and out of these programs. SIPP was also designed to answer questions about the short-term dynamics of employment, living arrangements, and economic well-being. The Census Bureau has reengineered SIPPâ€"fielding the initial redesigned survey in 2014. This report evaluates the new design compared with the old design. It compares key estimates across the two designs, evaluates the content of the redesigned SIPP and the impact of the new design on respondent burden, and considers content changes for future improvement of SIPP.

Striking a balance between specific techniques and the underlying logic of social scientific inquiry, this book provides a valuable introduction to social research methods. After an introductory section that places social research in the context of science and logical reasoning, the book follows the sequence of a typical research project, beginning with research design, proceeding to data collection, and then to data interpretation. The authors focus on four major approaches to research--experimentation, survey research, field research, and the use of available data--illustrating their discussion with numerous case studies and examples drawn from sociology, social psychology, demography, history, education, and political science. While advocating a multiple-methods strategy that treats the approaches as complementary, the authors provide a detailed account of the advantages and disadvantages, as well as the actual process, of carrying out research with each approach. Sophisticated enough to make social science students become intelligent consumers of research evidence, this lucidly written survey is also entirely accessible to those with very little knowledge of the field.

### **Holding the State to Account**

Presidential earmarks? Perhaps even more so than their counterparts in Congress, presidents have the motive and the means to politicize spending for political power. But do they? In Presidential Pork, John Hudak explains and interprets presidential efforts to control federal spending and accumulate electoral rewards from that power. The projects that members of Congress secure for their constituents certainly attract attention. Political pundits still chuckle about

the "Bridge to Nowhere." But Hudak clearly illustrates that while Congress claims credit for earmarks and pet projects, the practice is alive and well in the White House, too. More than any representative or senator, presidents engage in pork barrel spending in a comprehensive and systematic way to advance their electoral interests. It will come as no surprise that the White House often steers the enormous federal bureaucracy to spend funds in swing states. It is a major advantage that only incumbents enjoy. Hudak reconceptualizes the way in which we view the U.S. presidency and the goals and behaviors of those who hold the nation's highest office. He illustrates that presidents and their White Houses are indeed complicit in distributing presidential pork—and how they do it. The result is an illuminating and highly original take on presidential power and public policy.

Detailed descriptions guide students through the design and implementation of actual research studies. One of the strongest features of this book is its focus on both quantitative and qualitative research. While quantitative research strategies are covered extensively, various qualitative approaches such as ethnography, historical methods, phenomenology, grounded theory, and case studies are also discussed. The authors show students how to prepare a proposal for submission to an Institutional Review Board and present detailed coverage of the key elements of research, including sampling techniques, ethical considerations, data collection methods, measurement, judging validity, experimental and nonexperimental methods, descriptive and inferential statistics, qualitative data analysis, and report preparation.
