7 Secrets of Persuasion is the first book to take the latest scientific insights about the mind and apply them to the art of persuasion. It directly translates the revolution in neuroscience that has occurred over the last 40 years into practical new techniques for effective persuasion. Whether your goal is to persuade one person—a husband, child, or boss—or the millions who might purchase an Apple Watch or a Budweiser, 7 Secrets of Persuasion will show you how to: Unearth the motivation that actually changes a behavior like smoking, voting, or buying, even though people don't know why they do what they do. Tap into the mental process that gives religious symbols, political symbols, and commercial logos their power. Make a promise that is delayed, uncertain, and rational more compelling by making it immediate, certain, and emotional. Transform your candidate, service, or product into the one people want by utilizing what psychologists call the

“fundamental attribution error.”

In the late eighteenth and early nineteenth centuries, the Canadian colonies faced great changes and upheaval. The United States tried to invade and conquer Canada in the Revolutionary War and the War of 1812. This book helps you read how Canada changed from a few sparsely populated colonies to a country in its own right.

Energy and the Environment is conceived and written at a level suitable for use as an introductory undergraduate textbook in energy and environment for students with very little mathematics or science background. It can also be used by anyone interested in technical, political, environmental, and economical issues related to energy. To make the text appropriate for engineering and science students, additional topics are included within information boxes placed throughout the book, and in the appendices. Examples requiring algebra are indicated in a similar manner. Depending on the audience, instructors can decide to eliminate all or part of this material without loss of continuity. Each chapter in Energy and the

Environment stands alone, and the text can be taught in any order that the instructor deems suitable. Widely different curricula can therefore be designed and tailored for any audience simply by focusing on the appropriate sections from the appropriate chapters. For example, an environmental engineering course might include the summaries of various energy sources types, with an emphasis on air pollution, radiation, and environmental economics. A science curriculum might alternately emphasize the various technological sections and incorporate some of the engineering designs. This book is now available and can be purchased at <http://vervepublishers.com>. You may also order a free examination copy if you are considering adopting the Energy and the Environment for your classes. I would be most pleased to receive comments and thank you for your time!

One of the early pioneers in the manufacture of trucks, Sterling is synonymous with rugged well-engineered trucks with a reputation for reliable service in off-road, heavy-duty applications—mining, construction, and logging. Distinctive engineering hallmarks included wood-lined frames and the continued use of chain drive long after its abandonment by other manufacturers. Established in Milwaukee, Wisconsin, production of Sternberg trucks began in 1907, becoming Sterling in 1915. Acquired by the White Motor Company in 1951, Sterling-White production ended in 1953. This Photo Archive chronicles this unique truck through large-format archival photographs and detailed captions.

Auto Repair For Dummies, 2nd Edition (9781119543619) was previously published as Auto Repair For Dummies, 2nd Edition (9780764599026). While this version features a new Dummies cover and design, the content is the same as the prior

release and should not be considered a new or updated product. The top-selling auto repair guide--400,000 copies sold--now extensively reorganized and updated. Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. For new or would-be do-it-yourself mechanics, this illustrated how-to guide has long been a must and now it's even better. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. Author Deanna Sclar has updated systems and repair information throughout, eliminating discussions of carburetors and adding coverage of hybrid and alternative fuel vehicles. She's also revised schedules for tune-ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.

This densely illustrated, hands-on guide to diesel engine maintenance, troubleshooting, and repair renders its subject more user-friendly than ever before. Finally, boatowners who grew up with gas engines can set aside their fears about tinkering with diesels, which are safer and increasingly more prevalent. As in other volumes in the International Marine Sailboat Library, every step of every procedure is illustrated, so that users can work from the illustrations alone. The troubleshooting charts in the second chapter--probably the most comprehensive ever published--are followed by system-specific chapters, allowing readers to quickly diagnose problems, then turn to the chapter with solutions. Diesel engine systems covered include: mechanical; oil; fresh- and raw-water cooling; low- and high-pressure fuel; exhaust; starting; charging; transmission and stern gear.

Slumach's Gold

The Class 50 locomotives were built by English Electric between 1967 and 1968. Fifty examples were built, and were initially used to haul express passenger trains on the, then non-electrified, section of the West Coast Main Line between Crewe

and Scotland. They were originally hired from English Electric Leasing, and were eventually purchased outright by BR around 1973. Class 50s were nicknamed "Hoovers" by rail enthusiasts because of the distinctive sound made by the air-filters originally fitted (these proved unreliable, and were removed during mid-life refurbishment, but the "Hoover" nickname stuck). Once the electrification of the line from Crewe to Glasgow was completed, the locomotives were moved to services in the south west of England, primarily on the mainline from London to Exeter, and were eventually retired from service in 1994 after being progressively replaced by the InterCity 125 High-Speed Trains (HSTs).

Slumach's Gold chronicles what is possibly Canada's greatest lost-mine story. It searches out the truth behind a Salish man's hanging for murder in 1891 and tracks the intriguing legend about him that grew after his death. It was a legend that turned into a drama of international fascination when Slumach—the hanged criminal—was mysteriously linked to gold nuggets “the size of walnuts.” The stories claimed that Slumach had placed a curse on a hidden motherlode to protect it from interlopers and trespassers just before he plunged to his death “at the wrong end of a five-strand rope.” Although many have attempted to find Slumach's gold over the past 100 years, following tantalizing clues that are part of the legend itself, none have succeeded—or have they? Rick Antonson, Mary Trainer and Brian Antonson have diligently sifted through history and myth, separating fact from fiction, but leaving the legend intact—along with the promise of gold yet to be found by some future gold seeker.
