Krause Publications' Standard Catalog series is available by specific marque, in individual volumes or a set. Each book contains in-depth profiles of specific makes by model, factory photos, and up-to-date vehicle pricing. The I-to-conditional pricing system assures readers of accurate values, whether a vehicle is a #1 low-mileage, rust-free beauty or a #6 parts-only heap. "Techs & specs", original factory prices, production and serial numbers, and engine/chassis codes are noted by model, thus helping you determine authenticity accuracy. Historical, technical and pricing information are combined from hundreds of sources. James Flammang values each model according to the popular 1-6 grading system invented by Old Cars magazine.

aggression and, in many cases, stop it after it has become a problem * use games to teach your dog to obey and much more.

Outstanding Academic Title 2005 - Choice Magazine The period between the two world wars was crucial in the history of homosexuality in Europe. It was then that homosexuality first came out into the light of day. Just crawling out from under the Victorian blanket, Europe was devastated by a gruesome war that consumed the flower of its youth. Tamagne examines the currents of nostalgia and yearning, euphoria, rebellion, and exploration in the postwar era, and the bonds forged at school and on the battlefield, in a scholarly treatise charting the early days of the homosexual and lesbian scene. Berlin became the capital of the new culture, and the center of a political movement seeking rights and protections for what we now call gays and lesbians. In England, the struggle was brisk to undermine the structures and strictures of Victorianism; whereas in France (which was more tolerant, over all), homosexuality remained more subtle and nonmilitant. However, the social and political backlash soon became apparent, first of all in Germany. More conservative attitudes arrested the evolution of the new mores, and it was not until the 1960s that the new wave of the sexual revolution once again swept the continent. Tamagne's work outlines the long and arduous journey from the shadows toward acceptability as the homosexual and lesbian community sets out to find a new legitimacy at various levels of society. She weaves together cultural references from literature, songs and theater, news stories and private correspondence, police reports and government documents to give a rounded picture of the evolving scene. * "The first volume argues that homosexuality, a 'high culture' sort, enjoyed a golden age consequent upon the Great War's liberalization of morals. In volume 2, reaction and repression march through the 1930s. [] A lively read. Highly recommended." - CHOICE Magazine * Florence Tamagne holds a PhD from the prestigious Institute of Political Studies in Paris, France. This is her second book tracing the evolution of homosexuality in Europe.

Ford Focus Service and Repair Manual

Inspired by the Simple Sabotage Field Manual released by the Office of Strategic Services in 1944 to train European resistors, this is the essential handbook to help stamp out unintentional sabotage in any working group, from major corporations to volunteer PTA committees. In 1944, the Office of Strategic Services (OSS)—the predecessor of today's CIA—issued the Simple Sabotage Field Manual that detailed sabotage techniques designed to demoralize the enemy. One section focused on eight incredibly subtle—and devastatingly destructive—tactics for sabotaging the decision-making processes of organizations. While the manual was written decades ago, these sabotage tactics thrive undetected in organizations today: Insist on doing everything through channels. Make speeches. Talk as frequently as possible and at great length. Refer all matters to committees. Bring up irrelevant issues as frequently as possible. Haggle over precise wordings of communications. Refer back to matters already decided upon and attempt to question the advisability of that decision. Advocate caution and urge fellow-conferrees to avoid haste that might result in embarrassments or difficulties later on. Be worried about the propriety of any decision. Everyone has been faced with someone who has used these tactics, even when they have meant well. Filled with proven strategies and techniques, this brief, clever book outlines the counter-sabotage measures to detect and reduce the impact of these eight classic sabotage tactics to improve productivity, spur creativity, and engender better collegial relationships.

With delicate language and wisdom, Madeleine Thien explores the longing of families pulled apart by conflicts between generations, cultures, and values. Each of these stories captures a deeply personal world in which characters struggle to reconcile family loyalty with individual desires. In "House," a 10-year-old girl longs for the alcoholic mother who left the house one day never to return. In "Dispatch," a woman tries to hold her marriage together even after finding proof that her husband is in love with someone else. In "A Map of the City," a young woman's troubled relationship with her father overshadows the course she takes in her adult life. Thien's fresh perspective and spare, haunting prose have already won her prizes and the praise of established masters. "Simple Recipes" is the beginning of a luminous writing career.

What is Heaven Like?

In the 50s & 60s Coventry Climax engines powered many race-winning cars, including some driven by Stirling Moss & Jack Brabham. To get the true inside story, the author, an engineer, has talked to all surviving Coventry Climax personnel who were involved with the racing engines. The author was given full access to all of Walter Hassan's papers, photographs and engine drawings. After 30 months of original research and writing, this book describes exactly how these famous engines developed from industrial fire pumps to the Hillman Imp, from Le Mans winning Lotus Elites to Formula One winners driven by Stirling Moss and Jack Brabham, right through to the company's takeover by Jaguar in 1963. Viewed through the eyes of an engineer, and the detailed recollections of those who were there, this is a fascinating account of the trials and tribulations of leading edge race engine design from 1952 to 1966.

PENGUINDRUM Vol. 1

This book presents fundamental concepts and general approaches to City Logistics. City Logistics is the process of totally optimising urban logistics activities by considering the social, environmental, economic, financial and energy impacts of urban freight movement. City Logistics initiatives are required to solve urban freight transport problems including high levels of traffic congestion, negative environmental impacts, high energy consumption and a shortage of labour. The focus of this work is on modelling City Logistics. Modelling is of crucial importance, since estimates of the impacts generated by City Logistics measures are required for evaluating them. It highlights the formulation of mathematical models of vehicle routing and scheduling with Intelligent Transport Systems (ITS), optimal terminal locations and impact estimation by City Logistics measures. Heuristics techniques such as genetic algorithms, simulated annealing and tabu search are also given to identify approximate optimal solution of these combinatorial optimisation problems. ITS provides powerful tools for

efficiently managing and operating vehicle fleets. Sophisticated logistics systems can now be developed by integrating Global Positioning Systems (GPS) and Geographical Information Systems (GIS) in conjunction with application software. In this context, the book presents a theoretical and practical treatment of modelling City Logistics based on ITS.

This textbook guides the reader towards various aspects of growth and international trade in a Diamond-type overlapping generations framework. Using the same model type throughout the book, timely topics such as growth with bubbles, debt reduction in rich countries and policies to mitigate climate change are explored . The first part starts from the “old” growth theory and bridges to the “new” growth theory (including R&D and human capital approaches). The second part presents an intertemporal equilibrium theory of inter and intra-sectoral trade and concludes by analyzing the debt mechanics inducing the huge imbalances among eurozone countries. The book is primarily addressed to graduate students wishing to proceed to the analytically more demanding journal literature.
