Locked in a vault since 1941, here is Napoleon Hill's definitive lesson on how to organize your thinking to attain success! In *How to Own Your Mind*, you receive a one-of-a-kind master class in how to think for success from motivational pioneer and author of *Think and Grow Rich*, Napoleon Hill. In three compelling chapters, Hill demonstrates how to organize, prioritize, and act on information so that it translates into opportunity. Knowledge is not power. Only applied knowledge is power. This book teaches you how to use what you know, and how to know what's worth knowing. "The name Napoleon Hill is synonymous with practical advice on how to get ahead."—Mitch Horowitz, CNBC.com

This publication provides an overview of the importing process and contains general information about import requirements. This edition contains much new and revised material brought about because of changes in the law, particularly the Customs Modernization Act. The Customs modernization provisions has fundamentally altered the process by shifting to the importer the legal responsibility for declaring the value, classification, and rate of duty applicable to entered merchandise. Chapters cover entry of goods, informed compliance, invoices, assessment of duty, classification and value, marking, special requirements for alcoholic beverages, motor vehicles and boats, import quotas, fraud, and foreign trade zones. In addition to the material provided by the U. S. Customs Service, the private commercial publisher of this book has provided a bonus chapter on how to build a tax-free import-export business.

It is an exceptionally thoughtful assessment of assessment, and I am (along with anyone else who broods about education) much in your debt. Jerome Bruner, personal communication with the author  
When this award-winning book was originally published in 1994, a review in the TES said: Beyond Testing is a refreshingly honest look at the dilemmas faci

Mars, because it is the most like Earth of the planets in the solar system and the place where the first detection of extraterrestrial life seems most likely to be made. The failures in 1999 of two NASA missions- Mars Climate Orbiter and Mars Polar Lander-caused the space agency's program of Mars exploration to be systematically rethought, both technologically and scientifically. A new Mars Exploration Program plan (summarized in Appendix A) was announced in October 2000. The Committee on Planetary and Lunar Exploration (COMPLEX), a standing committee of the Space Studies Board of the National Research Council, was asked to examine the scientific content of this new program. This goals of this report are the following: -Review the state of knowledge of the planet Mars, with special emphasis on findings of the most recent Mars missions and related research activities; -Review the most important Mars research opportunities in the immediate future; -Review scientific priorities for the exploration of Mars identified by COMPLEX (and other scientific advisory groups) and their motivation, and consider the degree to which recent discoveries suggest a reordering of priorities; and -Assess the congruence between NASA's evolving Mars Exploration Program plan and these recommended priorities, and suggest any adjustments that might be warranted.
