Health Service Support Operations

This manual is primarily a ready reference to assist the ground observer in aircraft recognition and identification. It provides information on current operational aircraft of the United States and foreign countries, which may be observed worldwide in the combat area. It can be used as source material for personnel conducting unit training in visual aircraft recognition. The procedures in this publication apply throughout the US Army. The data is based on the best information available at the time of publication; however, it is not all-inclusive because of some classification guidelines. This publication, by nature, has a built-in time lag, and some aircraft may still be under development or classified at the time of writing, but may be fielded or unclassified at, or after, publication.

First published in 1831, "Crotchet Castle" is the sixth novel by Thomas Love Peacock. Similar to his previous novel "Headlong Hall", the story revolves around an interesting group of obsessive eccentrics and their witty and entertaining conversations. The story begins with a gathering in one of the character's villa on the Thames and includes a canal journey towards Wales. Startlingly witty and infinity entertaining, "Crotchet Castle" is recommended for lovers of clever satirical writing and is not to be missed by fans of Peacock's fantastic work. Thomas Love Peacock (18 October 1785 - 23 January 1866) was an English poet, novelist, and important figure in the East India Company. A good friend of Percy Bysshe Shelley, they both had a significant influence on each other's work. Peacock was most famous for writing satirical novels, which usually involved characters sat around a table discussing contemporary philosophical ideas. Other notable works by this author include: "Headlong Hall" (1815), "Gryll Grange" (1861), and "Melincourt" (1817). Many vintage books such as this are increasingly scarce and expensive. It is with this in mind that we are republishing this volume now in an affordable, modern, high-quality edition complete with introductory essays by Sir Walter Raleigh and Virginia Woolf.

The June 2019 OMB Circular No. A-11 provides guidance on preparing the FY 2021 Budget and instructions on budget execution. Released in June 2019, it's printed in two volumes. This is Volume I. Your budget submission to OMB should build on the

President's commitment to advance the vision of a Federal Government that spends taxpayer dollars more efficiently and effectively and to provide necessary services in support of key National priorities while reducing deficits. OMB looks forward to working closely with you in the coming months to develop a budget request that supports the President's vision. Most of the changes in this update are technical revisions and clarifications, and the policy requirements are largely unchanged. The summary of changes to the Circular highlights the changes made since last year. This Circular supersedes all previous versions. VOLUME I Part 1-General Information Part 2-Preparation and Submission of Budget Estimates Part 3-Selected Actions Following Transmittal of The Budget Part 4-Instructions on Budget Execution VOLUME II Part 5-Federal Credit Part 6-The Federal Performance Framework for Improving Program and Service Delivery Part7-Appendices Why buy a book you can download for free? We print the paperback book so you don't have to. First you gotta find a good clean (legible) copy and make sure it's the latest version (not always easy). Some documents found on the web are missing some pages or the image quality is so poor, they are difficult to read. If you find a good copy, you could print it using a network printer you share with 100 other people (typically its either out of paper or toner). If it's just a 10-page document, no problem, but if it's 250-pages, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. It's much more cost-effective to just order the bound paperback from Amazon.com This book includes original commentary which is copyright material. Note that government documents are in the public domain. We print these paperbacks as a service so you don't have to. The books are compact, tightly-bound paperback, full-size (8 1/2 by 11 inches), with large text and glossy covers. 4th Watch Publishing Co. is a HUBZONE SDVOSB. <https://usgovpub.com>

Guerrilla and Special Forces Operation

Mines are among the best artificial obstacles---they are portable, installed relatively easily, and constitute a hazard to the enemy; however large scale employment of mines requires considerable time, manpower, and logistical effort. Mines delay and canalize enemy movement, lower the enemy's will to fight, and cause fear of sudden and unexpected casualties. Mines, in contrast to passive obstacles such as road craters and barbed wire, are termed active obstacles because of their destructive potential. If placed in a location where movement is confined such as at a ford or on a bridge approach, a few mines can create an obstacle; however, mines are more frequently employed to create obstacles by distributing them in quantity over a relatively large area. Although mines may be used individually for the purpose of causing casualties, this manual is primarily concerned with the employment of mines as obstacles.

Jungle Operations

Contingencies and crises arrive with many names - natural disasters, accidents, terrorist actions, war, and military operations other than war. In colloquial English, a contingency is something that can happen, but that generally is not anticipated, while a disaster is generally defined by the outcome of a specific contingency. Hurricanes, tornados, earthquakes and successful terrorist attack are generally disastrous when they impact our installations or local community. Disasters are not measured by the chain of results, only the final impact. Who/What was hurt, damaged, destroyed or lost and how long will it take to restore full mission capabilities? Only rarely, can humans prevent them or control their intensity. However, we can minimize their effects and should always be ready to respond through the development of various contingency plans. A contingency plan is a set of procedures prepared in advance to respond to specific or multiple contingencies the base and unit may face. Many plans fail due to restrictive thinking-" that's never happened"-and for failure to think outside the box. A good plan is tailored to the base or unit specific situation and looks at contingencies and second to third order effects. Likewise, a good plan does not look so far outside the box that it includes things that will not happen or is too unwieldy. For instance, if assigned to Ellsworth AFB, South Dakota, a plan is not required for hurricanes or tidal waves, but would include winter storms that bases in tropical areas would not consider. By anticipating problems and planning for them, the base and unit can rapidly mobilize the technical, financial, administrative, and engineering resources needed to minimize detrimental impact to the base. For CE units to respond effectively to emergencies, contingencies and disasters, procedures and plans must be in place when the incident occurs. Effective post disaster or post-attack response begins with planning and base preparations well before a crisis threatens. The chaotic environment following a disaster or an attack is not the time or place to begin thinking about how to respond. This pamphlet will help you plan for contingencies and disasters and lay out ways to minimize their impact on the mission and the personnel at your installation. This pamphlet supports AFI 10-210, Prime Base Engineer Emergency Force Program and AFI 10-211, Civil Engineer Contingency Response Planning. It discusses contingencies for which civil engineers must be prepared. It contains practical information to help unit-level civil engineers plan their responses to contingencies, disasters, war, and other military operations. It explains how to identify requirements and get resources; to organize civil engineer response teams; and to train and exercise those teams. It concludes by presenting a brief history of Air Force Civil Engineers. It applies to all Civil Engineers, including Air National Guard (ANG) units and Air Force Reserve Command (AFRC).

"Principles of Irrigation Engineering" is a 1913 work by F. T. Bioletti on the subject of irrigation methods, dealing with canals, dams, storage, water supply, dry land, and related law. Frederic Theodore Bioletti (1865 - 1939) was an English-born American vintner. He studied at the University of California, Berkeley from 1889 to 1900, where he worked with prominent soil scientist Professor E.W. Hilgard. His work with Hilgard on the fermentation of wines under different conditions were

significant in helping California vintners to refine their wine production practices and improving the resulting wines. Bioletti was the first chair of the Department of Viticulture and Enology and founded the grape breeding program at the University of California Agricultural Experiment Station. This volume will appeal to those with an interest in irrigation techniques, and their history and development in particular. Many vintage books such as this are becoming increasingly scarce and expensive. It is with this in mind that we are republishing this volume now in an affordable, modern, high-quality edition complete with a specially-commissioned new biography of the author.
