Forthcoming Books

The economic concepts presented in FUNDAMENTAL OF MANAGERIAL ECONOMICS, 9e, show students how to use common sense to understand business and solve managerial problems without calculus. This innovative text helps students develop and sharpen their economic intuition--an invaluable skill that helps students, as future managers, decide which products to produce, costs to consider, and prices to charge, as well as the best hiring policy and the most effective style of organization. With its unique integrative approach, the text presents the firm as a cohesive, unified organization and demonstrates that important business decisions are interdisciplinary. A basic valuation model is constructed and used as the underlying economic model of the firm; each topic is then related to an element of the value maximization model--a process that shows how management integrates accounting, finance, marketing, personnel, and production functions. The text also provides an intuitive guide to marginal analysis and basic economic relations. Once students grasp the importance of marginal revenue and marginal costs, the process of economic optimization becomes intuitively obvious. In addition, a wide variety of examples and simple numerical problems vividly illustrate the application of managerial economics to a vast assortment of practical situations. By studying the material in FUNDAMENTALS OF MANAGERIAL ECONOMICS, 9e, those seeking to further their business careers learn how to more effectively collect, organize, and analyze information. They gain powerful tools that can help them become more successful--and satisfied--in their careers. But for distinguished Harvard economist Henry Spearman it offered diversion of a decidedly different sort and one he'd hardly anticipated: murder. While the island police force is mired in an investigation that leads everywhere and nowhere, the diminutive, balding Spearman, who likes nothing better than to train his curiosity on human behavior, conducts an investigation of his own, one governed by rather different laws—those of economics. Theorizing and hypothesizing, Spearman sets himself on the killer's trail as it twists from the postcard-perfect beaches and manicured lawns of a resort to the bustling old port of Charlotte Amalie to densely forested hiking trails with perilous drops to a barren offshore cay.

Forestry Economics introduces students and practitioners to all aspects of the management and economics of forestry. The book adopts the approach of managerial economics textbooks and applies this to the unique processes and problems faced by managers of forests. While most forestry economics books are written by economists for future economists, what many future forest and natural resource managers need is to understand what economic information is and how to use it to make better business and management decisions. John E. Wagner draws on his twenty years of experience teaching and working in the field of forest resource economics to present students with an accessible understanding of the

unique production processes and problems faced by forest and other natural resource managers. There are three unique features of this book: The first is its organization. The material is organized around two common economic models used in forest and natural resources management decision making. The second is the use of case studies from various disciplines: Outdoor and Commercial Recreation, Wood Products Engineering, Forest Products, and Forestry. The purpose of these case studies is to provide students with applications of the concepts being discussed within the text. The third is revisiting the question of how to use economic information to make better business decisions at the end of each chapter. This ties each chapter to the preceding ones and reinforces the hypothesis that a solid working knowledge of these economic models and the information they contain are necessary for making better business decisions. This textbook is an invaluable source of clear and accessible information on forestry economics and management for not only economics students, but for students of other disciplines and those already working in forestry and natural resources.
