A Quarter Century of UNIX

We present examples of familiar phenomena found in nonequilibrium systems, including oscillatory phenomena, order-formation processes, and pattern formation. In particular, we introduce commonly used mathematical methods to analyze their characteristics. First, we present oscillations described by the Lotka–Volterra and van der Pol equations, the Brusselator, the Oregonator, and

relaxation oscillations as examples of oscillatory phenomena. Second, we investigate the order-formation process in colloidal crystals and present an experimental observation of 2D array formation. Third, we demonstrate pattern formation in crystals on the basis of the Mullins–Sekerka instability, and in chemical and biological systems on the basis of the Turing instability. In particular, we describe the optical properties and development of sophisticated structural patterns that directly interact with light. Finally, we briefly describe a theoretical phase-transition analogy that might clarify the concept of order formation in nonequilibrium systems.

Catching His Heart Olivia Franklin suspected coming

home to Jasper Gulch would mean eventually running into her first love, Jack McGuire. But she's adamant that she not repeat the mistakes that led to her broken heart. Yet from the moment she lays eyes on her former sweetheart, her resistance begins to crumble. The tall, handsome rancher made his choice all those years ago. He'd gone from the baseball diamond to a high-rise office and finally back home to the Double M—all without her. And no amount of centennial nostalgia can change the past. But the future is another story, and the pretty historian is about to get a lesson in romance from the lonesome cowboy she will never forget! Big Sky Centennial: A small town rich in history…and love.

Based on interviews with the key software engineers who invented and built the powerful UNIX operating system, this book provides unique insight into the operating system that dominates the modern computing environment. Originating from a small project in a backroom at AT &T Bell Labs, UNIX has

grown to be a dominant operating system in the commercial computing world -the operating system responsible for the development of the C programming language and the modern networked environment. Peter Salus is a longtime and well-recognized promoter and spokesman for UNIX and the UNIX community.

Gendered Compromises

Half a millennium of European warfare brilliantly retold by masterly historian Brendan Simms At the heart of Europe's history lies a puzzle. In most of the world humankind has created enormous political frameworks, whether ancient (such as China) or modern (such as the United States). Sprawling empires, kingdoms or republics appear to be the norm. By contrast Europe has remained stubbornly chaotic and fractured into often amazingly tiny pieces, with each serious attempt to unify the continent (by Charles V, Napoleon and Hitler) thwarted. In this marvelously ambitious and exciting new book, Brendan Simms tells the story of Europe's constantly shifting geopolitics and the peculiar circumstances that have made it both so impossible to dominate, but also so dynamic and ferocious. It is the story of a group of highly competitive and mutually suspicious dynasties, but also of a continent uniquely prone to interference from 'semi-detached' elements, such as Russia, the Ottoman Empire, Britain and (just as centrally to Simms' argument) the United States. Europe: The Struggle for Supremacy will become the standard work on this crucial subject -

and an extremely enjoyable one. Reviews: 'This is a brilliant and beautifully written history. From the Holy Roman Empire to the Euro, Brendan Simms shows that one of the constant preoccupations of Europeans has always been the geography, the power and the needs of Germany. Europe is a work of extraordinary scholarship delivered with the lightest of touches. It will be essential, absorbing reading for anyone trying to understand both the past and the present of one of the most productive and most dangerous continents on earth' William Shawcross 'World history is German history, and German history is world history.This is the powerful case made by this gifted historian of Europe, whose expansive erudition revives the proud tradition of the history of geopolitics, and whose immanent moral sensibility reminds us that human choices made in Berlin (and London) today about the future of Europe might be decisive for the future of the world' Timothy Snyder (author of Bloodlands) About the author: Brendan Simms is Professor of the History of International Relations at the University of Cambridge. His major books include Unfinest Hour: Britain and the Destruction of Bosnia (shortlisted for the Samuel Johnson Prize) and Three Victories and a Defeat: The Rise and Fall of the First British Empire.

Why America Failed

For one of Innisdale's residents, a priceless sonnet means poetic license to kill. . . . Grace Hollister's stay in England's picturesque Lake District has proven doubly fruitful -- the American literary scholar just sold her first book, and her romance with charming antiques dealer and ex-jewel thief Peter Fox has begun a new chapter. Sorting through a hoard of papers found in an old farmhouse, Grace and Peter discover an old letter that refers to a lost Shelley sonnet, "Sate the Sphinx." Before Grace can start tracking down this poetic treasure, though, Peter's shady past rears its head -- a particularly ugly head, belonging to a menacing Turk who's eager to see Peter dead. But there's plenty more trouble in store. Suddenly Grace and Peter are suspects in a murder investigation, and someone has tried his level best to kill her -- not once, but twice. The hieroglyphics are on the wall: unless Grace can unravel an inscrutable riddle and unearth the villain amid a cache of likely suspects, her story might be at an end. . . .

Over the last century, the Everglades underwent a metaphorical and ecological transition from impenetrable swamp to endangered wetland. At the heart of this transformation lies the Florida sugar industry, which by the 1990s was at the center of the political storm over the multi-billion dollar ecological "restoration" of the Everglades. Raising Cane in the

'Glades is the first study to situate the environmental transformation of the Everglades within the economic and historical geography of global sugar production and trade. Using, among other sources, interviews, government and corporate documents, and recently declassified U.S. State Department memoranda, Gail M. Hollander demonstrates that the development of Florida's sugar region was the outcome of pitched battles reaching the highest political offices in the U.S. and in countries around the world, especially Cuba—which emerges in her narrative as a model, a competitor, and the regional "other" to Florida's "self." Spanning the period from the age of empire to the era of globalization, the book shows how the "sugar question"—a label nineteenth-century economists coined for intense international debates on sugar production and trade—emerges repeatedly in new guises. Hollander uses the sugar question as a thread to stitch together past and present, local and global, in explaining Everglades transformation.

The Magic Rainbow

Words You Should Know In High School

The increasingly popular idea that cinematic fictions can 'do' philosophy raises some difficult questions. Who is actually doing the philosophizing? Is it the philosophical commentator who reads general arguments or theories into the stories conveyed by a film? Could it be the film-maker, or a group of collaborating film-makers, who raise and try to

answer philosophical questions with a film? Is there something about the experience of films that is especially suited to the stimulation of worthwhile philosophical reflections? In the first part of this book, Paisley Livingston surveys positions and arguments surrounding the cinema's philosophical value. He raises criticisms of bold theses in this area and defends a moderate view of film's possible contributions to philosophy. In the second part of the book he defends an intentionalist approach that focuses on the film-makers' philosophical background assumptions, sources, and aims. Livingston outlines intentionalist interpretative principles as well as an account of authorship in cinema. The third part of the book exemplifies this intentionalist approach with reference to the work of Ingmar Bergman. Livingston explores the connection between Bergman's work and the Swedish director's primary philosophical source-a treatise in philosophical psychology authored by the Finnish philosopher, Eino Kaila. Bergman proclaimed that reading this book was a tremendous philosophical experience for him and that he 'built on this ground'. With reference to materials in the newly created Ingmar Bergman archive, Livingston shows how Bergman took up Kaila's topics in his cinematic explorations of motivated irrationality, inauthenticity, and the problem of self-knowledge.

The Illustrator 10 Wow! Book

With this book, Karin Rosemblatt presents a gendered history of the politics and political compromise that emerged in Chile during the 1930s and 1940s, when reformist popular-front coalitions held power. While other scholars have focused on the economic realignments and novel political pacts that characterized Chilean politics during this era, Rosemblatt explores how gender helped shape Chile's evolving national identity. Rosemblatt examines how and why the aims of feminists, socialists, labor activists, social workers, physicians, and political leaders converged around a shared gender ideology. Tracing the complex negotiations surrounding the implementation of new labor, health, and welfare

policies, she shows that professionals in health and welfare agencies sought to regulate gender and sexuality within the working class and to consolidate the male-led nuclear family as the basis of societal stability. Leftists collaborated in these efforts because they felt that strong family bonds would generate a sense of class belonging and help unify the Left, while feminists perceived male familial responsibility as beneficial for women. Diverse actors within civil society thus reworked the norms of masculinity and femininity developed by state agencies and political leaders--even as others challenged those ideals.

The Compact Disc (CD), as a standardized information carrier, has become one of the most successful consumer products ever marketed. Although the original disc was intended for audio playback, its specific advantages opened very quickly the way towards various computer applications. The standardization of the Compact Disc Read-Only Memory (CD-ROM) and of all succeeding similar products, like Compact Disc interactive (CD-i), Photo and Video CD, CD Recordable (CD-R), and CD Rewritable (CD R/W), has substantially enlarged the range of possible applications. The plastic disc represented from the very beginning a removable medium of large storage capacity. The advent of the personal computer accompa nied by the increasing demand for both data distribution and exchange have strongly marked the evolution of the CD-ROM drive. The number of sold CD-ROM units exceeded 60 millions in 1997 when compared to about 2.5 millions in 1992. As computing power continuously improved over the years, computer pe ripherals have also targeted better performance specifications. In particular, the speed of CD-ROM drives increased

from the so-called 1X in 1984 to dou ble speed in 1992, and further to 32X at the beginning of 1998. The average time needed to access data on disc has dropped from about 300 ms to less than 90 ms within the same period of time.
