Interpreting Basic Statistics gives students valuable practice in interpreting statistical reporting as it actually appears in peer-reviewed journals. New to the eighth edition: A broader array of basic statistical concepts is covered, especially to better reflect the New Statistics. Journal excerpts have been updated to reflect current styles in statistical reporting. A stronger emphasis on data visualizations has been added. The statistical exercises have been re-organized into units to facilitate ease of use and understanding. About this book Each of the 64 exercises gives a brief excerpt of statistical reporting from a published research article, and begins with guidelines for interpreting the statistics in the excerpt. The questions on the excerpts promote learning by requiring students to interpret information in tables and figures, perform simple calculations to further their interpretations, critique data-reporting techniques, and evaluate procedures used to

collect data. Each exercise covers a limited number of statistics, making it easy to coordinate the exercises with lectures and a main textbook. The questions in each exercise are divided into two parts: (1) Factual Questions and (2) Questions for Discussion. The factual questions require careful reading for details, while the discussion questions show that interpreting statistics is more than a mathematical exercise. These questions require students to apply good judgment as well as statistical reasoning in arriving at appropriate interpretations.

The demand for, and interest in, high-capacity, high-performance disk storage systems is soaring. In the 1980s, only banks, airlines, and the government needed to have their data online and available at all times. Today, businesses and organizations of every size require it for local area network servers, web servers, enterprise-wide networks, etc. Redundant Arrays of Independent Disks (RAID) is the disk storage technology that is revolutionizing the ways online computer data is stored. Originally developed for mainframes, RAID technology is now used for supercomputers, mainframes, minicomputers,

servers, even high-end workstations - and soon personal computers. This text co-written by the RAID Advisory Board, is a technical handbook on RAID and other modern data storage technologies.

Tacita Dean's portrait of the poet and translator Michael Hamburger was filmed, at his home in rural Suffolk, in the last year of his life. Set against muted autumn colours, and with Hamburger performing an evocative, anecdotal inventory of the harvest from his apple orchard, the piece is a bittersweet reminder of time's passing that deftly captures, and quietly honours, an exemplary 20th century literary figure. Featuring a new essay by Brian Dillon, Dean's own notes on the making of the project, and a transcript of its central voiceover monologue, this publication looks back at the film, one that takes its place alongside a number of studies by Dean of other major creative and artistic figures, and one that remains one of her most enduring and affecting achievements.
