Nuclear Science Abstracts

Union List of Periodicals and Periodic Serials in the Physical Sciences and Engineering at Purdue University

Study & Master Physical Sciences Grade 12 has been especially developed by an experienced author team for the Curriculum and Assessment Policy Statement (CAPS). This new and easy-to-use course helps learners to master essential content and skills in Physical Sciences.

Associations' Publications in Print

In 1906, after an earthquake wiped out much of San Francisco, leading California officials and scientists described the disaster as a one-time occurrence and assured the public that it had nothing to worry about. *California Earthquakes* explains how, over time, this attitude changed, and Californians came to accept earthquakes as a significant threat, as well as to understand how science and technology could reduce this threat. Carl-Henry Geschwind tells the story of the small group of scientists and engineers who -- in tension with real estate speculators and other pro-growth forces, private and public -- developed the scientific and political infrastructure necessary to implement greater earthquake awareness. Through their political connections, these reformers succeeded in building a state apparatus in which regulators could work together with scientists and engineers to reduce earthquake hazards. Geschwind details the conflicts among scientists and engineers about how best to reduce these risks, and he outlines the dramatic twentieth-century advances in our understanding of earthquakes -- their causes and how we can try to prepare for them. Tracing the history of seismology and the rise of the regulatory state and of environmental awareness, *California Earthquakes* tells how earthquake-hazard management came about, why some groups assisted and others fought it, and how scientists and engineers helped shape it. -- Seth Stein, Northwestern University

Sessional Papers

Catalogue of Scientific and Technical Papers Published by the Former Mines Branch (since Renamed CANMET, Canada Centre for Mineral and Energy Technology) 1967-1974

California Earthquakes

Includes entries for maps and atlases.

Open Science by Design

Contains the full texts of all Tax Court decisions entered from Oct. 24, 1942 to date, with case table and topical index.

Brotherhood of the Bomb

Encyclopedia of Physical Science and Technology

Catalogue, Books and Journals in Advanced Mathematics

This volume deals with the philosophy of mathematics and of science and the nature of philosophical and scientific enquiry.

Philosophical Papers: Volume 1, Mathematics, Matter and Method

Research Memorandum

Reports and Papers in the Social Sciences

The fascinating story of the men who founded the nuclear age, fully told for the first time The story of the twentieth century is largely the story of the power of science and technology. Within that story is the incredible tale of the human conflict between Robert Oppenheimer, Ernest Lawrence, and Edward Teller-the scientists most responsible for the advent of weapons of mass destruction. How did science-and its practitioners-enlisted in the service of the state during the Second World War, become a slave to its patron during the Cold War? The story of these three men, builders of the bombs, is fundamentally about loyalty-to country, to science, and to each other-and about the wrenching choices that had to be made when these allegiances came into conflict. Gregg Herken gives us the behind-the-scenes account based upon a decade of research, interviews, and newly released Freedom of Information Act and Russian documents. Brotherhood of the Bomb is a vital slice of American history told authoritatively-and grippingly-for the first time.

Papers by command

Openness and sharing of information are fundamental to the progress of science and to the effective functioning of the research enterprise. The advent of scientific journals in the 17th century helped power the Scientific Revolution by allowing researchers to communicate across time and space, using the technologies of that era to generate reliable knowledge more quickly and efficiently. Harnessing today's stunning, ongoing advances in information technologies, the global research enterprise and its stakeholders are moving toward a new open science ecosystem. Open science aims to ensure the free availability and usability of scholarly publications, the data that result from scholarly research, and the methodologies, including code or algorithms, that were used to generate those data. Open Science by Design is aimed at overcoming barriers and moving toward open science as the default approach across the research enterprise. This report explores specific examples of open science and discusses a range of challenges, focusing on stakeholder perspectives. It is meant to provide guidance to the research enterprise and its stakeholders as they build strategies for achieving open science and take the next steps.

T.C. Memorandum Decisions

This special issue of Science and Context examines the entire area of scientific inquiry surrounding Einstein, presenting controversies and debates within their contexts.

Monthly Catalogue, United States Public Documents

Physical Sciences, Grade 12

Technical Memorandum

Over 220,000 entries representing some 56,000 Library of Congress subject headings. Covers all disciplines of science and technology, e.g., engineering, agriculture, and domestic arts. Also contains at least 5000 titles published before 1876. Has many applications in libraries, information centers, and other organizations concerned with scientific and technological literature. Subject index contains main listing of entries. Each entry gives cataloging as prepared by the Library of Congress. Author/title indexes.
