The first comprehensive history of felines—from the laps of pagan gods to present-day status as meme stars—as revealed by a very learned tabby with a knack for hunting down facts Since the dawn of civilization, felines have prowled alongside mankind as they expanded their territory and spread the myth of human greatness. And today, cats are peddled on social media as silly creatures here to amuse humans with their antics. But this is an absurd, self-centered fantasy. The true history of felines is one of heroism, love, tragedy, sacrifice, and gravitas. Not entirely convinced? Well, get ready, because Baba the Cat is here to set the record straight. Spanning almost every continent and thousands—yes, thousands—of years, Baba's complex story of feline survival presents readers with a diverse cast of cats long forgotten: from her prehistoric feline ancestors and the ancient Egyptian cat goddess Bastet to the daring mariners at the height of oceanic discovery, key intellectuals in the Enlightenment period, revered heroes from World Wars I and II, and the infamous American tabbies. Baba, a talented model in addition to a scholar, goes beyond surface-level scratches, pairing her freshly unearthed research with a series of stunning costume portraits to bring history to life. A paws-on journey through the feline hall of fame, with in-depth research and four-legged testaments that will make you rethink who defines history, *A Cat's Tale: A Journey Through Feline History*—a revealed to Paul Koudounaris—is a one-of-a-kind chronicle that introduces readers to the illustrious ancestors of their closest companions and shows, once and for all, that cats know exactly what they're doing.

Ethics in Information Technology

Document from the year 2016 in the subject Sociology - Social System, Social Structure, Class, Social Stratification, University of Poznan (Institute of Sociology), language: English, abstract: The book tests the double hypothesis of the death of the middle class. Using U.S. and other developed and developing countries' materials, it seeks to answer whether the popular thesis on its demise is true, and second, it shows it is true in a conceptual sense, viz., the term in question is a misnomer, referring to a stratum rather than a class. In the course of those investigations other key questions are examined, such as an all-important issue of socio-economic inequality: both in national and world context. The study is underpinned by an original conceptual framework encompassing social class and estate theories and ownership theory. This makes it possible to criticise many other approaches to the problems analysed. For instance, a critique of a well-known book by the French economist Th. Picketty has been undertaken, showing its numerous flaws. In addition, the analysis of the middle class concept demonstrates its defects manifest in its various definitions and usages.

SUPERHUBS

Are the often alarming claims about global warming based on science and justified by the facts? Is the human race really facing a major crisis due to emissions from fossil fuels? Would the proposed Climate Treaty solve a real environmental threat or would it create worldwide economic and social harm? S. Fred Singer is a distinguished astrophysicist who has taken a hard, scientific look at the evidence. In this new book, Dr. Singer explores the inaccuracies in historical climate data, the limitations of attempting to model climate on computers, solar variability and its

impact on climate, the effects of clouds, ocean currents, and sea levels on global climate, and factors that could mitigate any human impacts on world climate. Singer's masterful analysis decisively shows that the pessimistic, and often alarming, global warming scenarios depicted in the media have no scientific basis. In fact, he finds that many aspects of any global warming, such as a longer growing season for food and a reduced need to use fossil fuels for heating, would actually have a positive impact on the human race. Further, Singer notes how many proposed "solutions" to the global warming "crisis" (like "carbon" taxes) would have severe consequences for economically disadvantaged groups and nations. According to Arthur C. Clarke, author of *2001: A Space Odyssey*, *Hot Talk, Cold Science* dares to point out that 'the Emperor has no clothes.' Is there evidence to suggest discernible human influence on global climate? Of great interest, this book demonstrates that, at best, the evidence is sketchy and incomplete. *Hot Talk, Cold Science* is essential reading for anyone who wants to be fully informed about the global warming debate.

A crazy-valuable 1958 Gibson Flying V belonging to a Chicago bluesman--who, it turns out, also happens to have an equally rare 1958 Gibson Explorer! An out-of-the-blue, a "to whom it may concern" email leads the author to a trailer park in Salem, Oregon, where one of Bob Wills and the Texas Playboys' original 1940's Epiphone Emperor archtops is waiting to be purchased for a song! Luthier R.C. Allen relates the tales of buying Nat "King" Cole Trio guitarist Oscar Moore's Stromberg Master 400 archtop and of being gifted a 1953 Standel amp from Merle Travis! Buddy Merrill, the amazingly talented guitarist from the Lawrence Welk show, gives his 1970 Micro-Frets Huntington to the author, but only if he "promises to PRACTICE." Photos of the guitars and other exciting memorabilia round out a package that no vintage-guitar aficionado will want to be without! "Deke Dickerson's love for guitars and his genius for finding some of the rarest birds in the musical aviary is matched by his not-inconsiderable writing chops. For the Win

As a technical organization, charged with performing groundbreaking and pathfinding challenges on a daily basis, NASA has long valued the role of its Chief Engineers and Lead Systems Engineers. Although it takes a team to accomplish our missions and no members are unimportant, the Chief Engineers and Lead Systems Engineers who we look to lead our technical teams are critical to the success of our endeavors. It is this corps of dedicated, experienced, and passionate problem solvers and leaders who battle the technical headwinds that face every project, finding often hidden solutions and overcoming seemingly insurmountable obstacles to create paths to success. Furthermore, it is that indomitable spirit of ingenuity and perseverance that defines the Agency. Developing our Chief Engineers and Lead Systems Engineers is a commitment of the NASA engineering community, and one of our tenets for excellence. This development ensures our corps of engineers obtain the depth of technical acumen that they require, first as discipline engineers and then as Chief Engineers and Lead Systems Engineers, but also the associated management skills and experience to ensure they can interact with the rest of the project team and with program, Center, and Agency leadership. What's more, this development also ensures that NASA Chief Engineers and Lead Systems Engineers proficiently serve as leaders of their own technical teams, and that's what this book is all about. These technical leaders are critical to successfully implementing the three safety tenets we inherited from the Apollo program. These include the following: Strong in-line checks and balances. This means that engineers check their fellow engineers, and that no one checks their own homework. 1. Healthy tension between responsible organizations. In NASA today that is the programs and the three Technical Authorities (Engineering, Safety, and Health and Medical). Each organization has to be on equal footing with separate but equal chains of command to allow issues to be raised independently and provide the healthy tension to create organizational checks and balances. 2. "Value-added" independent assessment. "Value-added" means you bring in outside technical experts to peer review critical issues. Having a fresh set of eyes on a problem can provide a different perspective, leverage different experiences and result in more robust solutions. 3. NASA arrived at these three tenets through considerable blood, sweat, and loss, and our commitment to them is now inscribed in our Agency governance. As Chief Engineers and Lead Systems Engineers, your role in this is paramount, and achieving excellence in this is an expectation of your job. Serving in this role is not an easy task, but it is a tremendously rewarding one. You are the leaders of your technical teams, owners of the technical baseline, standard bearers of engineering best practices, decision makers, risk mitigators and problem solvers. You are Chief Engineers and Lead Systems Engineers, the title of which should say it all.

In any endeavor, dreams and goals not backed by concrete plans and preparations can result in failure. And marriage is no exception, claims H. Norman Wright. In fact, without solid planning and forethought by engaged couples, we will surely see a continuation of the startling divorce rate among Christians and non-Christians alike. On the other hand, thorough premarital counseling and preparation can result in lifelong marriages that are fulfilling and God honoring. That's where the church comes in. More and more churches are realizing that their responsibility lies not only in pronouncing men and women 'husband and wife,' but also in making sure the proper foundation is laid so that marriages have a better chance of standing strong under pressure. Since its introduction in 1977 as Premarital Counseling, this book has been used by literally thousands of churches throughout the country as both a guide and reference tool. Now Dr. Wright has added new material to cover some perplexing issues that have come into prominence only recently. Among those special concerns are: Interracial marriages Second marriages Marriages of persons from dysfunctional families Writing for both

pastors and other premarital counselors, H. Norman Wright sets you at ease about the counseling process, even if you've had only limited counseling experience. As the author of the popular *Before You Say I Do* and numerous other books on marriage, H. Norman Wright documents in *The Premarital Counseling Handbook* methods that have proved successful. These will help insure that the marriages performed in your church will resist the pressures that are destroying today's married couples.

Cloud computing and big data are arguably the most significant forces in information technology today. In the wake of revelations about National Security Agency (NSA) activities, many of which occur "in the cloud", this book offers both

enlightenment and a critical view. Vincent Mosco explores where the cloud originated, what it means, and how important it is for business, government and citizens. He describes the intense competition among cloud companies like Amazon and Google, the spread of the cloud to government agencies like the controversial NSA, and the astounding growth of entire cloud cities in China. An in-depth look at Japan's economic malaise and the steps it must take to compete globally In Japanization, Bloomberg columnist William Pesek—based in Tokyo—presents a detailed look at Japan's continuing twenty-year economic slow-

down, the political and economic reasons behind it, and the policies it could and should undertake to return to growth and influence. Despite new Prime Minister Shinzo Abe's promise of economic revitalization, investor optimism about the future, and plenty of potential, Japanization reveals why things are unlikely to change anytime soon. Pesek argues that "Abenomics," as the new policies are popularly referred to, is nothing more than a dressed-up version of the same old fiscal and monetary policies that have left Japan with crippling debt, interest rates at zero, and constant deflation. He explores the ten forces that are stunting Japan's growth and offers prescriptions for fixing each one. Offers a skeptical counterpoint to the popular rosy narrative on the economic outlook for Japan Gives investors practical and detailed insight on the real condition of Japan's economy Reveals ten factors stunting Japan's growth and why they are unlikely to be solved any time soon Explains why most of what readers believe they know about Japan's economy is wrong Includes case studies of some of the biggest Japanese companies, including Olympus, Japan Airlines, Sony, and Toyota, among others For many investors, businesspeople, and economists, Japan's long economic struggle is difficult to comprehend, particularly given the economic advantages it appears to have over its neighbors. Japanization offers a ground-level look at why its problems continue and what it can do to change course.

So Long Been Dreaming: Postcolonial Science Fiction & Fantasy is an anthology of original new stories by leading African, Asian, South Asian, and Aboriginal authors, as well as North American and British writers of colour. Stories of imagined futures abound in Western writing. Writer and editor Nalo Hopkinson notes that the science fiction/fantasy genre "speaks so much about the experience of being alienated, but contains so little writing by alienated people themselves." It's an oversight that Hopkinson and Mehan aim to correct with this anthology. The wealth of postcolonial literature has included many who have written insightfully about their pasts and presents. With So Long Been Dreaming they creatively address their futures. With an introduction by Hugo and Nebula Award-winner Samuel R. Delany. Contributors to So Long Been Dreaming are Opal Palmer Adisa, Celu Amberstone, Ven Begamudre, Tobias S. Buckell, Wayde Compton, Andrea Hairston, Maya Khankhoje, Tamai Kobayashi, Larissa Lai, Karin Lowachee, devorah major, Suzette Mayr, Carole McDonnell, Nnedi Okorafor-Mbachu, Eden Robinson, Nisi Shawl, Vandana Singh, Sheree R. Thomas, and Greg van Eekhout.
