This app was tested with different Samsung TVs (B-, C-, D- and E-Series), but it could happen that some devices are not supported. To ensure the support of such a variety of TVs, it could be that some buttons are either not working or multiple buttons have the same function. Smart Remote offers lots of cool features which allow simply working with Samsung Smart TV functionality. Have fun and explore other cool functions…some are hidden behind long click events, so be attentive! Note: On Samsung B-Series TVs the app "Remote Lan Control" must be installed. Note: On Samsung C- und D-

Series TVs the function "Remote Control" in the settings must be enabled. Note: Since it is not possible to select the HDMI sources directly, the app has implemented a workaround. Thus, the HDMI button number does not corresponds to the HDMI number on the TV. The HDMI button number describes the number of active HDMI devices, e.g. when having two HDMI devices, use the buttons HDMI1 and HDMI2! 'Erudite and accessible, McCann demonstrates how the national gets reconfigured around the global without losing some of its unique features. Far from being a one-size-fits-all Anglo-American template, neoliberalism comes in many different hues

and variations. This is by far the best textbook in the field and is destined to become a classic for years to come.' Manfred B. Steger, Professor of Political Science at the University of Hawai'i-Manoa, Honolulu, Hawai'i, USA 'A sweeping examination of systems of capitalism in theory and in the world's major industrial economies leads Leo McCann to challenge the conventional wisdom on globalization. Historical analysis of the evolution of business systems and detailed examination of present practice demonstrate persuasively that, despite facing common challenges, distinctive national differences remain salient. A must read for anyone who needs to understand how business systems operate in an increasingly interdependent world economy.' - Dr Eileen Appelbaum, Senior Economist, Center for Economic and Policy Research, Washington, DC, USA Globalization has profound effects on national economies even as distinct national 'models' of capitalism remain. International and Comparative Business accessibly tracks the historical and socio-political contexts of the world's major countries on a chapter-by-chapter basis to the present day. The book provides a comprehensive, critical, yet concise introduction to each of the economies' key features, including macro overviews as well as organizational and workplace-level analysis. Each chapter features learning objectives, in-depth interpretation and critique of key literature, and annotated further reading to allow readers to rigorously navigate their way through the wealth of material available for each country. This text is essential reading for students and researchers in the areas of international business and cross-cultural management, comparative political economy, and

history. Leo McCann is Senior Lecturer in International and Comparative Management at Manchester Business School, University of Manchester, UK

This book is available as open access through the Bloomsbury Open Access programme and is available on www.bloomsburycollections.com. Software has replaced a diverse array of physical, mechanical, and electronic technologies used before 21st century to create, store, distribute and interact with cultural artifacts. It has become our interface to the world, to others, to our memory and our imagination - a universal language through which the world speaks, and a universal engine on which the world runs. What electricity and combustion engine were to the early 20th century, software is to the early 21st century. Offering the the first theoretical and historical account of software for media authoring and its effects on the practice and the very concept of 'media,' the author of The

Language of New Media (2001) develops his own theory for this rapidly-growing, always-changing field. What was the thinking and motivations of people who in the 1960 and 1970s created concepts and practical techniques that underlie contemporary media software such as Photoshop, Illustrator, Maya, Final Cut and After Effects? How do their interfaces and tools shape the visual aesthetics of contemporary media and design? What happens to the idea of a 'medium' after previously media-specific tools have been simulated and extended in software? Is it still meaningful to talk about different mediums at all? Lev Manovich answers these questions and supports his theoretical arguments by detailed analysis of key media applications such as Photoshop and After Effects, popular web services such as Google Earth, and the projects in motion graphics, interactive environments, graphic design and architecture. Software Takes Command is a must for all practicing designers and media artists and scholars concerned with contemporary media.

How the Internet of Things will change your life: all you need to know, in plain English! The Internet of Things (IoT) won't just connect people: It will connect "smart" homes, appliances, cars, offices, factories, cities… the world. You need to

know what's coming: It might just transform your life. Now, the world's #1 author of beginning technology books has written the perfect introduction to IoT for everyone. Michael Miller shows how connected smart devices will help people do more, do it smarter, do it faster. He also reveals the potential risks—to your privacy, your freedom, and maybe your life. Make no mistake: IoT is coming quickly. Miller explains why you care, helps you use what's already here, and prepares you for the world that's hurtling toward you. --What is IoT? How does it work? How will it affect me? --What's realistic, and what's just hype? --How smart is my "smart TV" really? (And, is it watching me?) --Can smart IoT devices make me healthier? --Will smart appliances ever be useful? --How much energy could I save with a smart home? --What's the future of wearable tech? --When will I have a self-driving car? --When will I have a nearly self-driving car? (Hint: Surprisingly soon.) --Is IoT already changing the way I shop? --What's the future of drones, at war and in my neighborhood? --Could smart cities lower my taxes? --Who gets the data my devices are collecting? --How can I profit from the Internet of Things? --What happens when the whole world is connected? --Will I have any privacy left at all?
