The Development of the Social Sciences in the United States and Canada

Over the last decade, the field of socio-emotional development and aging has rapidly expanded, with many new theories and empirical findings emerging. This trend is consistent with the broader movement in psychology to consider social, motivational, and emotional influences on cognition and behavior. The Oxford Handbook of Emotion, Social Cognition, and Problem Solving in Adulthood provides the first overview of a new field of adult development that has emerged out of conceptualizations and research at the intersections between socioemotional development, social cognition, emotion, coping, and everyday problem solving. This field roundly rejects a universal deficit model of aging, highlighting instead the dynamic nature of socio-emotional development and the differentiation of individual trajectories of development as a function of variation in contextual and experiential influences. It emphasizes the need for a cross-level examination (from biology and neuroscience to cognitive and social psychology) of the determinants of emotional and socio-emotional behavior. This volume also serves as a tribute to the late Fredda Blanchard-Fields, whose thinking and empirical research contributed extensively to a life-span developmental view of emotion, problem solving, and social cognition. Its chapters

cover multiple aspects of adulthood and aging, presenting developmental perspectives on emotion; antecedents and consequences of emotion in context; everyday problem solving; social cognition; goals and goal-related behaviors; and wisdom. The landmark volume in this new field, The Oxford Handbook of Emotion, Social Cognition, and Problem Solving in Adulthood is an important resource for cognitive, developmental, and social psychologists, as well as researchers and graduate students in the field of aging, emotion studies, and social psychology.

Money for Graduate Students in the Social Sciences

Research on the influence of culture on consumer decision-making and consumption behavior has witnessed tremendous growth in the last decade. With increasing globalization, managers are becoming increasingly aware that operating in multiple markets is crucial for firms' survival and growth. As the world's growth engine shifts from Europe and North America to Asia and Latin America, it has become apparent that an inward-looking and domestic focus strategy will not be sustainable in the long run. And success in foreign markets requires marketers to understand not just what consumers in these markets need but also how they think, behave, consume, and purchase. Numerous studies have documented cultural differences in values and beliefs, motivational orientations, emotions, self-regulation, and information-processing styles, and the effects of these cultural variations on consumer behavior such as brand evaluation, materialism, and impulsive consumption. In this volume, experts from a variety of disciplines and perspectives trace the historical development of culture research in consumer psychology and examine the theoretical underpinnings that account for these findings and the current state of the field. Collectively, the chapters provide a forum for researchers to engage in thoughtful debates and stimulating conversations and offer directions for future research.

Psychology; a Study of a Science: Investigations of man as socius: their place in psychology and the social sciences

Symposium held at Purdue Univ. in June 4-5, 2010.

The British Journal of Psychiatry

The Psychological Study of Literature: Limitations, Possibilities, and Accomplishments

This book presents an integrated treatment approach for those struggling to adapt after the sudden, traumatic death of a loved one. The authors weave together evidence-based clinical strategies grounded in cutting-edge knowledge about both trauma and grief. The book offers a clear framework and many practical tools for building survivors' psychological and interpersonal resources, processing their trauma, and facilitating mourning. In a large-size format with lay-flat binding for easy photocopying, the book includes over 30 reproducible handouts. Purchasers can access a companion website to download and print these materials as well as supplemental handouts and a sample 25-session treatment plan. Winner (Second Place)--American Journal of Nursing Book of the Year Award, Psychiatric and Mental Health Nursing Category

The Oxford Handbook of Political Ideologies

The Handbook of Applied Social Research Methods shows how to make intelligent and conscious decisions so that researchers can refine and hone their research questions as new knowledge is gained, unanticipated obstacles are encountered, or contextual shifts take place - all key elements in the iterative nature of applied research. With examples and illustrations from the authors' own experiences, this book gives readers a practical guide to conducting applied research.

Knowledge Management, Organizational Memory and Transfer Behavior: Global Approaches and Advancements

The Wiley Blackwell Handbook of Transpersonal Psychology presents the most inclusive resource yet published on this topic - which seeks to benefit humanity by integrating ancient wisdom and modern knowledge. Features the work of more than fifty leading voices in the field, creating the most comprehensive survey of transpersonal psychology yet published Includes emerging and established perspectives Charts the breadth and diversity of the transpersonal landscape Covers topics including shamanism, neurobiology, holotropic states, transpersonal experiences, and more

Grant Data Quarterly

Handbook of Culture and Consumer Behavior

Critical Perspectives on the Organization and Improvement of Schooling

The Sociocultural Turn in Psychology

Psychology.

Morality in Everyday Life

A generally acknowledged characteristic of modern life, namely the temporalization of experience, inextricable from our intensified experience of contingency and difference, has until now remained largely outside psychology's purview. Wherever questions about the development, structure, and function of the concept of time have been posed - for example by Piaget and other founders of genetic structuralism - they have been concerned predominantly with concepts of "physical", chronometrical time, and related concepts (e.g., "velocity"). All the contributions to the present volume attempt to close this gap. A larger number are especially interested in the narration of stories. Overviews of the relevant literature, as well as empirical case studies, appear alongside theoretical and methodological reflections. Most contributions refer to specifically historical phenomena and meaning-constructions. Some touch on the subjects of biographical memory and biographical constructions of reality. Of all the various affinities between the contributions collected here, the most important is their consistent attention to issues of the constitution and representation of temporal experience.

Social Sciences & Humanities Index

This is the first comprehensive volume to offer a state of the art investigation both of the nature of political ideologies and of their main manifestations. The diversity of ideology studies is represented by a mixture of the range of theories that illuminate the field, combined with an appreciation of the changing complexity of concrete ideologies and the emergence of new ones. Ideologies, however, are always with us. The Handbook is divided into three sections: The first is divided into three sections: The first reflects some of the latest thinking about the development of ideology on an historical dimension, from the standpoints of conceptual history, Marx studies, social science theory and history, and leading schools of continental philosophy. The second includes some of the most recent interpretations and theories of ideology, all of which are sympathetic in their own ways to its exploration and close investigation, even when judiciously critical of its social impact. This section contains many of the more salient contemporary accounts of ideology. The third focuses on the leading ideological families and traditions, as well as on some of their cultural and geographical manifestations, incorporating both historical and contemporary perspectives. Each chapter is written by an expert in their field, bringing the latest approaches and understandings to their task. The Handbook will position the study of ideologies in the mainstream of political theory and political analysis and will attest to its indispensability both to courses on political theory and to scholars who wish to

take their understanding of ideologies in new directions.

Human Motivation

The updated and expanded third edition of this widely used work comprises more than 1,500 annotated citations. It has served as a teaching text for students wanting a clear approach to learning about important reference sources in the social sciences.

The Social Sciences

Interdisciplinary inquiry has become more pervasive in recent decades, yet we still know little about the conduct of this type of research or the information problems associated with it. This book is one of few empirical studies of interdisciplinary knowledge practices. It examines how interdisciplinary scientists discover and exchange information and knowledge, highlighting how the boundaries between disciplines affect how information is used and how knowledge is constructed. It is written for scholars and practitioners with an interest in developing information systems and research environments to foster innovative scientific work. Target groups include researchers in information science, science studies, communication, as well as research administrators and information professionals.

Qualitative Research in Social Work

In this volume, progressive experts survey recent trends in qualitative study, which relies on small sample groups and interview data to better represent the context and complexity of social work practice. Chapters address different approaches to qualitative inquiry, applications to essential areas of research and practice, integration of qualitative and quantitative methods, and epistemological issues. This second edition brings even greater depth and relevance to social work qualitative research, including new material that tackles traditional research concerns, such as data quality, ethics, and epistemological stances, and updated techniques in data collection and analysis. To increase the usefulness for students and researchers, the editors have reorganized the text to present basic principles first and then their applications, and they have increased their focus on ethics, values, and theory. New and revised illustrative studies highlight more than ever the connection between effective research and improved social functioning among individuals and groups. The collection continues to feature scholars and practitioners who have shaped the social work research practice canon for more than twenty years, while also adding the innovative work of up-and-coming talent.

Handbook of Applied Social Research Methods

The Oxford Handbook of Emotion, Social Cognition, and Problem Solving in Adulthood

This eleventh volume in the series departs from the pattern of earlier volumes. Some of those volumes addressed research, design, and policy topics in terms of environmental settings, for example, homes, communities, neighborhoods, and public places. Others focused on environmental users, for example, chil dren and the elderly. The present volume examines the field of environment and behavior studies itself in the form of intellectual histories of some of its most productive and still visible senior participants. In so doing we hope to provide readers with a grand sweep of the field-its research and design content, methodology, institutions, and past and future trajectories-through the experiences and intellectual histories of its participants. Why intellectual histories? Several factors led to the decision to launch this project. For one, 1989 was an anniversary and commemorative year for the Environmental Design Research Association, perhaps the major and most long-standing interdisciplinary organization of environment and behavior re searchers and practitioners. Established in 1969, this organization has been the vehicle for generations of researchers and practitioners from many disciplines to come together annually to exchange ideas, present papers, and develop professional and personal relationships. It held its first and twentieth meetings in North Carolina, with the twentieth conference substantially devoted to dis cussions of the past, present, and future of the field-a taking stock, so to speak. Thus it seemed appropriate to launch a volume on intellectual histories at this significant juncture in the life of the field.

A Directory of Information Resources in the United States: Social Sciences

The sociocultural turn in psychology treats psychological subjects, such as the mind and the self, as processes that are constituted, or "made up," within specific social and cultural practices. In other words, though one's distinct psychology is anchored by an embodied, biological existence, sociocultural interactions are integral to the evolution of the person. Only in the past two decades has the sociocultural turn truly established itself within disciplinary and professional psychology. Providing advanced students and practitioners with a definitive understanding of these theories, Suzanne R. Kirschner and Jack Martin, former presidents of the American Psychological Association's Division of the Society for Theoretical and Philosophical Psychology, assemble a collection of essays that describes the discursive, hermeneutic, dialogical, and activity approaches of sociocultural psychology. Each contribution recognizes psychology as a human science and supports the individual's potential for agency and freedom. At the same time, they differ in their understanding of a person's psychological functioning and the best way to study it. Ultimately the sociocultural turn offers an alternative to overly biological or interiorized theories of the self, emphasizing instead the formation and transformation of our minds in relation to others and the world.

The Wiley-Blackwell Handbook of Transpersonal Psychology

Congratulations to Aida Hurtado and Karina Cervantez- winners of the 2009 Women of Color Psychologies Award! This award, given by the Association of Women in Psychology Association, is voted on by AWP members for contributions of new knowledge and importance to the advancement of the psychology of women of color. Offering broad coverage of all U.S. Latino groups, this volume synthesizes cutting-edge research and methodological advances and provides culturally sophisticated information that can be used by researchers, policy makers, and practitioners. The editors and contributing authors summarize theories and conceptual models that can further our understanding of the development and adaptation of U.S. Latino populations. In addition, they focus on the importance of cultural sensitivity and competence in research and intervention approaches and how to achieve it. Key Features • Highlights the normative development and strengths of U.S. Latino populations • Elaborates on the heterogeneity of Latinos in that it does not assume that all Latino populations, and the contexts of their development, are identical. • Emphasizes on cultural sensitivity and competence at all levels • Focuses on the importance of cultural identity amongst Latinos and its contribution to healthy developmental outcomes.

Replication Research in the Social Sciences

Major "paradigm shifts"-replacing one "world view" with another regarding what constitutes appropriate knowledge do not happen over night. Centuries usually intervene in the process. Even minor shifts admitting alternative world views into the domain of legitimate knowledge producing theory and practice-require decades of controversy, especially, it seems to us, in the field of education. It has only been in the last 20 years or so that the educational research community has begun to accept the "scientific" credibility of the qualitative approaches to inquiry such as participant observation, case study, ethnogra phy, and the like. In fact, these methods, with their long and distinguished philosophical traditions in phenomenology, have really only come into their own within the last decade. The critical perspective on generating and evaluating knowledge and practice-what this book is mostly about-is in many ways a radical depar ture from both the more traditional quantitative and qualitative perspec tives. The traditional approaches, in fact, are far more similar to one another than they are to the critical perspective. This is the case, in our view, for one crucial reason: Both the more quantitative, empirical-analytic and qualitative, interpretive traditions share a fundamental epistemological commitment: they both eschew ideology and human interests as explicit components in their paradigms of inquiry. Ideology and human interests, however, are the "bread and butter" of a critical approach to inquiry.

Handbook of U.S. Latino Psychology

Resources in Education

"This book captures an in-depth knowledge base on the most current and useful concepts, applications, and processes relevant to the successful management of knowledge assets"--Provided by publisher.

Register of Research in the Social Sciences and Directory of Research Institutions

This book is essential reading for anyone conducting research in the social and behavioural sciences. No other volume offers researchers such concise and authoritative information on replication and its importance in the furtherance of knowledge. The 36 chapters include discussions on replication in behavioural research, editorial bias against replication research, and the replication process in social research.

Free Money For Graduate School

Research Methods in Social Relations, 8th Edition, features a series of updates and revisions in its comprehensive introduction to current research methods in the social and behavioural sciences. Offers comprehensive coverage of a wide variety of traditional and topical research methods Addresses many newer research approaches such as propensity score matching, mixed methods designs, and confirmatory factor analysis Written to be accessible to a range of social and behavioural science disciplines, including public health, political science, sociology, and psychology Includes new chapters that engage readers in critical thinking about the processes involved in building sustainable partnerships in field and community settings The Companion website includes an array of resources for Instructors, including Test Banks, Power Point lecture slides, discussion questions and exercises This new edition is the much-anticipated follow-up to 2001's seventh edition by Hoyle, Harris and Judd

Research Methods in Social Relations

The Ethics of Social Research

Social Sciences and Humanities Index

Environment and Behavior Studies

Scientific Research in British Universities and Colleges

Social scientists are unprepared for many of the ethical problems that arise in their research, and for criticisms of their ethics that seem to ignore such cherished scientific values as objectivity and freedom of inquiry. Yet, they possess method ological talent and insight into human nature that can be used to understand and resolve these problems. The contributors to this book demonstrate that criticism of the ethics of social research can stimulate constructive development of meth odology. Both volumes of The Ethics of Social Research were written for and by social scientists to show how ethical dilemmas arise in the day-to-day conduct of social research and how they can be resolved. The topics discussed in this book include ethical problems that arise in experiments and sample surveys; the companion volume deals with the ethical issues involved in fieldwork and in the regulation and publication of research. With candor and humor, many of the contributors describe lessons they have learned about themselves, their methods, and their research participants. Collectively, they illustrate that both humanists and detenninists are likely to encounter ethical dilemmas in their research, albeit different ones, and that a blending of detenninistic and humanistic approaches may be needed to solve these dilemmas. The aim of this book is to assist irwestigators in preparing to meet some of the ethical problems that await the unwary. It offers perspectives, values, and guidelines for anticipating problems and devising solutions.

Narration, Identity, and Historical Consciousness

Review of Research in Social Studies Education, 1976-1983

This collection originated in, and is, an interdisciplinary dialogue. The subject of conversation is the social sciences in the twentieth century and the role of large-scale philanthropy, using Rockefeller philanthropy in particular as a case study. The intention is to draw a much needed integration of historical, theoretical, and philosophical perspectives on the development of modern knowledge systems and their mentors. The dialogue builds on the work of earlier historians and philosophers of science as well as pioneers in the study of philanthropy. Earlier descriptive studies have given way in the past 20 years to the more analytic stance taken by the authors represented in this volume.

Register of Research in the Social Sciences in Progress and in Plan and Directory of Research Institutions

In the first of seven chapters of this comprehensive review of research in social studies, William B. Stanley presents an overview of current issues and approaches relevant to research in social education. The second chapter, by Catherine Cornbleth, is a review of critical thinking and cognitive process research. Special attention is given to "myths" that guide current research and practice. In the third chapter, Richard K. Jantz and Kenneth Klawitter review early childhood and elementary education research in social education. In Chapter 4, James S. Leming analyzes the research on a wide range of approaches to socio-moral or values education. In Chapter 5, Jane J. White discusses ethnographic research and the paradoxes and problems it raises for social education. Chapter 6, by William B. Stanley, is a discussion of recent research and development in the foundations of social education. The chapter focuses on the wide variety of rationales developed, critiqued, and refined by mainstream social educators since 1976. In the final chapter, Jack L. Nelson and James P. Shaver discuss the status of and limitations inherent in social education, each author taking a different position regarding the future of research in social education. Throughout the reviews, implications for practice and further investigation are addressed. (LH)

U.S. Census of Population, 1960

A comprehensive, easy-to-understand guide to the entire research process, this book quickly and efficiently equips advanced students and research assistants to conduct a full-scale investigation. The book is organized around the idea of a 'research script' that is, it follows the standard mode of research planning and design, data collection and analysis, and results writing. The volume contains 35 chapters, some co-authored by advanced graduate students who give their fellow students a touch of the 'real world' adding to the clarity and practicality of many chapters.

Internationalizing the History of Psychology

Work at the Boundaries of Science

This book represents a major revision of my earlier work, Theories of Motivation: From Mechanism to Cognition. A number of shortcomings in the p,revious book became increasingly evident to me. First of all, there were serious omissions. Second, there has been much new knowl edge since the inception of the prior book, so that it was becoming out dated. And finally, I was dissatisfied with some of the writing, feeling that parts of the book were needlessly complex and that certain topics did not deserve the space that they were allotted. A revision, therefore, was initiated. I attempted to fill some of the gaps by including chapters on psychoanalytic, social learning, and humanistic theory. Furthermore, other topics that could have been dis cussed within the outline of Theories of Motivation but were neglected are incorporated into the present volume.

These topics include, for ex ample, social facilitation, arousal, emotions, personal responsibility, and the irrationality of attributions. In addition to this new material, I up dated the ideas examined in Theories of Motivation. Little could be altered in-the sections on H ullian and Lewinian theory, for these con ceptions are no longer undergoing modification. The discussion of these theories was merely shortened and simplified, bringing them more in line with their current influence in psychology. But achievement and attribution theories have changed in the past years - or at least our understanding in these areas has changed - and discussion of these topics was greatly altered.

Treating Traumatic Bereavement

Free Money for Graduate School, published in 1990, is a book by Laurie Blum, author of the Free Money series.

The Psychology Research Handbook

Highlights of current research on morality in human development.

Psychology of Science

An author and subject index to publications in fields of anthropology, archaeology and classical studies, economics, folklore, geography, history, language and literature, music, philosophy, political science, religion and theology, sociology and theatre arts.
