A single comprehensive reference for nursing leaders, leadership organizations, nursing clinicians, and educators, *Nursing Leadership* is the only compendium of nursing terminology in existence. Written by eminent nursing professionals, it provides descriptions of prominent individuals in nursing, information regarding nine leadership-related topics, and current trends in nurse leadership. This second edition has been expanded to encompass 80 new entries and revisions or updates to all original entries. It provides an extensive overview of current leadership issues including theories, characteristics, and skills required of nurse leaders in today's complex health care system. Highly respected contributors include Claire Fagan, Beverly Malone (NLN CEO), Polly Bednash (AACN CEO), Patricia Benner, and many others. For ease of use this new edition contains both alphabetic and thematic indexes, extensive cross-

Increasing costs and higher utilization of resources make the role of process improvement more important than ever in the health care industry. *Management Engineering: A Guide to Best Practices for Industrial Engineering in Health Care* provides an overview of the practice of industrial engineering (management engineering) in the health care industry. Explaining how to maximize the unique skills of management engineers in a health care setting, the book provides guidance on tried and true techniques that can be implemented easily in most organizations. Filled with tools and documents to help readers communicate more effectively, it includes many examples and case studies that illustrate the proper application of these tools and techniques. Containing the contributions of accomplished healthcare process engineers and process improvement professionals, the book examines Lean, Six Sigma, and other process improvement methodologies utilized by management engineers. Illustrating the various roles an industrial engineer might take on in health care, it provides readers with the practical understanding required to make the most of time-tested performance improvement tools

in the health care industry. Suitable for IE students and practicing industrial engineers considering a move into the health care industry, or current healthcare industrial engineers wishing to expand their practice, the text can be used as a reference to explore individual topics, as each of the chapters stands on its own. Also, senior healthcare executives will find that the book provides insights into how the practice of management engineering can provide sustainable improvements in their organizations. To get a good overview of how your organization can best benefit from the efforts of industrial engineers, this book is a must-read.

The Complete Mental Health Directory

A directory for patients, families, paraprofessionals, and professionals in the field. Early sections offer chapters overviewing specific disorders and treatment options, list organizational, print, electronic, and media resources, and describe national associations and federal and state agencies. Later sections provide data for professionals on accreditation and quality assurance, print and electronic resources, training, and conferences, and list products and services that support clinical management of mental disorders, such as databases, software companies, and information services. A final section lists drug companies by both company name and drug name. Includes disorder, entry name, and geographic indexes.

Health Administration

Socioeconomic conditions are known to be major determinants of health at all stages of life, from pregnancy through childhood and adulthood. "Life-course epidemiology" has added a further dimension to the understanding of the social determinants of health by showing an association between early-life socioeconomic conditions and adult health-related behaviors, morbidity, and mortality. Sensitive and critical periods of development, such as the prenatal period and early childhood, present significant opportunities to influence lifelong health. Yet simply intervening in the health system is insufficient to influence health early in the life course. Community-level approaches to affect key determinants of health are also critical. Many of these issues were raised in the 1995 National Academies book, *Children's Health, the Nation's Wealth*. The present volume builds upon this earlier book with presentations and examples from the field. Focusing on *Children's Health* describes the evidence linking early childhood life conditions and adult health; discusses the contribution of the early life course to observed racial and ethnic disparities in health; and highlights successful models that engage both community factors and health care to affect life course development.
