The War On FreedomThe 9/11 ConspiraciesWere the U.S. invasions of Afghanistan and Iraq planned long before the tragedies of September 11, 2001? Why did many WTC survivors mention bombs? Why did normal security measures consistently fail that day? Why has no one in government been fired or even reprimanded for failure to anticipate and prevent the attacks? For that matter, who was truly behind the strikes? Who and where is Osama bin Laden? What connects the bin Laden and Bush families?If the purpose of the perpetrators of 9/11 was to end traditional American freedoms, they may well have succeeded. Laws rushed through a Congress that never had a chance to read them while under a declared state of emergency have curtailed our freedoms.

Action-Based Quality Management

This book provides a richly illustrated study of sustainability, innovation and entrepreneurship. Specifically, it examines the ways in which governmental policies and practices modify the social conditions necessary to promote innovation in businesses and by so doing impact economic development. Exploring topics such as green innovation, green customer capital, smart cities, green entrepreneurship and environmental responsibility, this book presents some of the most current research and best practices in the field. In today's global economy, strategies, policies and practices that address the negative effects of human activity on the environment need to be incorporated into the business framework in order for companies to achieve a sustainable competitive advantage. Around the world, such changes have already resulted in a broad range of products, production methods and technical features that ensure environmental protection. At the same time, the mass media's communication of a deteriorating earth have motivated a growing number of citizens in both developed and developing nations to modify their consumption habits towards more ecological products. Consequently, an increasing number of companies are reacting to these changes in business and legal frameworks and consumer preferences by investing in new forms of green innovation or "eco-innovation" designed to promote both environmental and corporate sustainability. For example, Hewlett-Packard eliminated lead from its welding process; Wal-Mart reduced the emissions of their

suppliers; and Cisco, Dell and IBM are investing in smart grids. This volume showcases pioneering efforts among companies, citizens, and government agencies that are moving from theory to practice by placing sustainability at the core of their development strategies.

This book examines the ways in which quality management methods, tools, and practices help improve an organization's performance and achieve sustainable competitive advantages. This volume includes quality techniques and tools such as the EFQM Model, SERVPERF model, E-S-Qual scale and the ISO 9001 certification and provide a wide variety of empirical studies in different economic sectors. In the current economic environment, characterized by economic turmoil and fierce competition, quality management has become a key strategy for organizations to overcome today's challenges. Organizations benefits from implementing quality management systems by following two approaches. First, they implement quality practices aimed at ensuring customer satisfaction by considering consumer expectations and establishing strategies accordingly. Second, organizations improve processes by establishing efficient and effective process management systems that improve productivity, lower costs, reduce unnecessary expenses, eliminate all non-value added activities, and ultimately maximize excellence and customer satisfaction. Quality management thereby provides tools, techniques, and methods for continuous process improvement in both the professional and

academic worlds, which, when implemented by organizations in times of crisis, enable more effective administration of activities undertaken by managers. Containing contributions from various academics and scholars, this new book provides cutting edge research, methods and techniques providing a reference manual for academics, scholars, practitioners and policy-makers.

Nowadays, chessplayers spend almost all their free time preparing openings, and rarely spend the time necessary to perfect the vitally important technique of calculating. Regular training in solving and playing out endgames studies is a good recipe for eliminating that shortcoming. This training is directed at developing resourcefulness, fantasy (in chess, these qualities are called "combinative acuity"), and the readiness to sacrifice material, in pursuit of the goal - winning! How do we develop good habits of winning endgame play? There are lots of manuals; but this may be the first in which a famous practical player, a trainer with a world-renowned name, and a study composer who has earned the title of International Grandmaster of Composition, share their views in one and the same book.

Management of Permanent Change

In the current times of more frequent crises and ever shortening innovation cycles, the management of change has become a crucial task of survival. While it is not a new topic in business research, the developments of the last decade have posed many new challenges for the change management of firms and organizations and have thus also raised many new questions for academic research in business administration, which the present book turns to deepen. Its particular focus is on disruptive change including its driving forces as well as effective and sustainable management. This publication constitutes a collection of articles that discuss change and innovation processes across different sectors of the economy (industry, banking, and retail), the role of leadership and corporate governance for

the effectiveness and sustainability of organizational change.

The aim of this book is to show how wine tourism can be used as a model for sustainable economic development, driving economic growth and social development in some locations. It will explore the interaction between tourism and viticulture in wine tourism destinations, while also explaining some of the repercussions of these activities. This book covers various topics including regional development, environmental management, sustainable viticulture, quality management in wineries and wine tourism routes among others. Wine tourism, which combines two important yet distinct economic activities (i.e., tourism and viticulture), has recently emerged as a new tourism product driven by tourists' search for new experiences and wineries' need to diversify their businesses and seek new revenue streams to boost sales. This new form of tourism, which typically takes place in rural areas and which combines wine production with tourist activities, is becoming important for such regions by providing a complementary income source. It provides a model for sustainable economic development for these regions, which for various reasons may otherwise struggle to develop. Featuring cases and business implications from various locations, this book provides an important source of knowledge—both theoretical and practical—suitable to academics, scholars, researchers, and practitioners in the

tourism sector and the wine industry.

Sustainability in Innovation and Entrepreneurship

This volume provides the most current research on smart cities. Specifically, it focuses on the economic development and sustainability of smart cities and examines how to transform older industrial cities into sustainable smart cities. It aims to identify the role of the following elements in the creation and management of smart cities: • Citizen participation and empowerment • Value creation mechanisms • Public administration • Quality of life and sustainability • Democracy • ICT • Private initiatives and entrepreneurship Regardless of their size,

all cities are ultimately agglomerations of people and institutions. Agglomeration economies make it possible to attain minimum efficiencies of scale in the organization and delivery of services. However, the economic benefits do not constitute the main advantage of a city. A city's status rests on three dimensions: (1) political impetus, which is the result of citizens' participation and the public administration's agenda; (2) applications derived from technological advances (especially in ICT); and (3) cooperation between public and private initiatives in business development and entrepreneurship. These three dimensions determine which resources are necessary to create smart cities. But a smart city, ideal in the way it channels and resolves technological, social and economic-growth issues, requires many additional elements to function at a high-performance level, such as culture (an environment that empowers and engages citizens) and physical infrastructure designed to foster competition and collaboration, encourage new ideas and actions, and set the stage for new business creation. Featuring contributions with models, tools and cases from around the world, this book will be a valuable resource for researchers, students, academics, professionals and policymakers interested in smart cities.

Maneuvering

This volume examines the theoretical and empirical landscape of social entrepreneurship in both non-profit and profit sectors. It extends the traditional view of social entrepreneurship to include the environmental and institutional factors that affect the emergence of social entrepreneurship activities, such as formal laws, regulations, procedures and informal institutions. The editors aim to provide evidence and increased understanding of this growing phenomenon. Social

Entrepreneurship is gaining recognition as a key element of economic and social development. It embraces a wide set of situations with a broad scope of activities in for-profit and non-profit organizations interested in social performance and/or in economically profitable performance, with an emphasis on achieving social aim. In the strict sense, social entrepreneurship corresponds to entrepreneurs whose main concern is to achieve social objectives rather than to obtain personal financial profits. However, there is still much to be learned about the dynamics and processes of social entrepreneurship. The current literature in the field has tended to focus on psychological experiences and personal characteristics, or on organizational perspectives such as resources, capabilities and leadership. This book intends to provide theoretical frameworks and empirical studies to this very new and broad field. Specifically, this book provides a collection of contemporary research in the following topics: How to create opportunity through social innovation How to detect entrepreneurial opportunity to meet social needs How to develop social entrepreneurship, while still seeking profits How to discover opportunities for different forms of social entrepreneurship Featuring contributions from around the world, this book is a valuable source for students, academics, researchers, policy makers, and professionals in the area of social entrepreneurship.

Tragicomedy in the Endgame

Featuring case studies from the industrial and tourism sectors, this book provides an interdisciplinary perspective on the effect of total quality management on business and innovation strategies. The principles of Total Quality Management (TQM) have been widely researched and analyzed as an essential tool for businesses to compete in a globalized economy. This book presents the latest research on the applications of TQM across different functions such as customer service, human resources management and cost control. It demonstrates how the utilization of TQM tools, such as the SERVQUAL model, Eco-Management and Audit Scheme (EMAS), High Involvement Practices (HIWP) and the EFQM excellence model, impacts a firm's performance, enhances productivity and innovation and reduces cost, thereby allowing them to compete more effectively in the global market. Building on the extensive literature on the relationship between TQM and business performance, the authors argue that quality acts as a powerful competitive tool that companies should embrace in their corporate strategy. By promoting activities that result in greater efficiency, improved control and management of the organization (internal quality), firms can achieve significant

improvement in customer satisfaction, employee satisfaction, social impact and business results (external quality) and exceed expectations in these areas.

A Rendezvous With God

This book analyses the importance of the entrepreneurial university, specifically in relation to the creation of entrepreneurial ideas and attitudes in students and entrepreneurial initiatives in academic institutions. The aim of the editors and contributing authors is to provide the reader with a set of experiences illustrating the advantages of communicating and encouraging entrepreneurship among students, thereby highlighting the “third mission” of the university: the need to adopt entrepreneurial strategy without disrupting the quality of teaching and research. Featuring initiatives from institutions around the world, the authors argue that the increasing importance of knowledge in the technical and social dimensions of today’s world provides greater relevance to the entrepreneurial university. In this context, universities transcend their traditional focus on teaching and basic research to carry out technology transfers, marketing ideas, and patent registrations, and incorporate spin-off companies that contribute to industrial innovations, economic growth, and job creation. In the teaching dimension, the entrepreneurial university represents a focus on programs which train students in the applications and most advanced practices in knowledge-driven fields. The book addresses such questions as: Can marketing ideas deteriorate the quality of

research in the long term? What importance does the cultural framework have for an entrepreneurial education? What circumstances and programs facilitate spin-offs in universities? What are the key features of entrepreneurial universities? In reference to entrepreneurship education in its broadest sense, then, it corresponds to the framework of ideas and general features on which entrepreneurship is founded: in-depth knowledge of the projects or ventures which they wish to carry out, capacity to perceive the relevant characteristics of the environment, and the leadership and goal setting skills to achieve success.

Author Annie F. Johnston was first inspired to create the beloved children's literature character known as the Little Colonel after a run-in with a supremely self-possessed little boy who reminded her of the imperious mannerisms of her grandfather, a high-ranking officer in the Confederate army. In this novel, a later entry in the series, a key plot point is finally resolved as Lloyd chooses a bride.

This book focus on organizational changes that are taking place in higher education. Universities are currently experiencing a period of change and

restructuring into what is known as the European Higher Education Area (EHEA). EHEA represents a process of educational reform based on three types of transformations: structural, curricular and organizational. The integration of universities in this new EHEA is bringing conceptual and methodological changes not just to the structure of university education, but also to the teaching-learning processes and the conditions under which they take place. EHEA is prompting a change in the teaching model towards the consideration of students as the main actors in the educational process. This change requires new teaching strategies where students are asked to resolve problems with tools provided by the teacher. This book presents ideas, results and challenges related to new information and communication technologies, innovations and methodologies applied to education and research, as well as demonstrating the latest trends in educational innovation.

THE NATIONAL BESTSELLER A lifelong beekeeper, Albert Honig is deeply acquainted with the ways and workings of the hives. He knows that bees dislike wool clothing and foul language; that the sweetest honey is made from the blooms of eucalyptus; and that bees are at their gentlest in a swarm. But Albert is less versed in the ways of people, especially his beautiful, courageous, and secretive friend Claire. A friend and neighbor since childhood, Claire was a hovering presence—and then a glaring absence—in Albert's life, a change that has never been reconciled. When she is killed in a seemingly senseless accident during a

burglary gone wrong, Albert is haunted by the loss. In the aftermath of this tragedy, he is left to piece together the events of their lives to attempt to make sense of their shared past and the silence that persisted between them for a decade before her death. What Albert comes to learn is that Claire's secrets were far darker than anything he could have imagined

Innovation and Teaching Technologies

This book examines the different ways companies can develop and design social innovation. Combining technological and social perspectives, the contributors present emerging research on social innovation from different sectors such as entrepreneurship, education and energy. Collectively, the authors demonstrate the ways in which social innovation can drive sustainability and development in regions around the world. All societies are characterized by their political, economic and social institutions, as well as by how they utilize technology. The social innovations with the highest importance are those which modify existing institutions or create new ones, and based on their magnitude, they can be considered as radical or incremental. For example, when Joseph Chamberlain encouraged workers to organize in order to achieve universal male suffrage in Great Britain in 1885, this was a considered a radical innovation for British society, which in turn changed its political framework. Social innovations may be based on intelligence and commitment, on technology or on social entrepreneurship in its

most open forms. In addition, social innovations can be classified into those which correspond to an entire country or region, a field (e.g., education) or a sector (e.g., entrepreneurship, technology, social reform). Featuring contributions on topics such as agro-food, smart cities, higher education, gender equality and sports, this book is ideal for academics, students, scholars, professionals and policy makers in the areas of innovation, entrepreneurship, sustainability and regional development.

The Biopolitics of Gender

This book discusses the main issues, challenges, opportunities, and trends involving the interactions between academia, industry, government and society. Specifically, it aims to explore how these interactions enhance the ways in which companies deliver products and services in order to achieve sustainable competitiveness in the marketplace. Sustainable competitiveness has been widely discussed by academics and practitioners, considering the importance of protecting the environment while sustaining the economic goals of organizations. The Quintuple Helix innovation model is a framework for facilitating knowledge, innovation and sustainable competitive advantage. It embeds the Triple and the Quadruple Helix models by adding a fifth helix, the “natural environment.” The Triple Helix model focuses on the university-industry-government triad, while the Quadruple adds civil society (the media- and culture-driven public) as a fourth

helix. The Quintuple Helix model facilitates research, public policy, and practical application of sustainable competitiveness principles. Applying the most recent developments and theoretical insights of this model, the contributors to this volume address such questions as: how do government, academia, industry and civil society actors interact for promoting sustainable competitiveness at the country (regional) level? How do these actors influence sustainable operations management at the company (business) level? In so doing, they shed new light on the dynamics of economic growth, sustainability and competitiveness.

Strategies and Best Practices in Social Innovation

This title provides a theoretically and methodologically new and distinct approach to gender through the frameworks of biopolitics and genealogy, theorising it as a historically specific apparatus of biopower. Through the use of a diverse mix of historical and contemporary documents, the book explores how the problematisation of intersex infant genitalia in 1950s psychiatry propelled the emergence of the gender apparatus in order to socialise sexed individuals into the ideal productive and reproductive subjects of White, middle-class postwar America.

Sports Management as an Emerging Economic Activity

This book examines education in entrepreneurship through an action-learning environment that uses educational innovation tools. It explores various education tools, technology tools and pedagogical methods being implemented into university curriculums around the world. Entrepreneurship in society is rapidly gaining popularity as entrepreneurial activities aimed to create social value are fundamental in the development of an innovative, sustainable economy. This notion has been encouraging universities to incorporate entrepreneurship-related competencies into the curriculums of almost all subjects. Thus, developing an action-learning environment with educational innovation tools, technology tools and pedagogical methods is becoming increasingly important to universities.
