Charles Edge, Zack Smith, and Beau Hunter provide detailed explanations of the technology required for large-scale Mac OS X deployments and show you how to integrate it with other operating systems and applications. Enterprise Mac Administrator's Guide addresses the growing size and spread of Mac OS X deployments in corporations and institutions worldwide. In some cases, this is due to the growth of traditional Mac environments, but for the most part it has to do with "switcher" campaigns, where Windows and/or Linux environments are migrating to Mac OS X. However, there is a steep culture shock with these types of migrations. The products that are used are different, the nomenclature is different, and most importantly the best practices for dealing with the operating system are different. Apple provides a number of tools to help automate and guide IT toward managing a large number of Mac OS X computers—it has since before Mac OS X was initially released. However, if you want to put together all of the pieces to tell a compelling story about how to run an IT department or a deployment of Macs, you need to compile information from a number of different sources. This book will provide explanations of the technology required. This book discusses large margin and kernel methods for speech and speaker recognition. *Speech and Speaker Recognition: Large Margin and Kernel Methods* is a collation of research in the recent advances in large margin and kernel methods, as applied to the field of speech and speaker recognition. It presents theoretical and practical foundations of these methods, from support vector machines to large margin methods for structured learning. It also provides examples of large margin based acoustic modelling for continuous speech recognizers, where the grounds for practical large margin sequence learning are set. Large margin methods for discriminative language modelling and text independent speaker verification are also addressed in this book. **Key Features:** Provides an up-to-date snapshot of the current state of research in this field. Covers important aspects of extending the binary support vector machine to speech and speaker recognition applications. Discusses large margin and kernel method algorithms for sequence prediction required for acoustic modeling. Reviews past and present work on discriminative training of language models, and describes different large margin algorithms for

Let's face it. Just the word exegesis puts some of us on edge. We are excited about learning to interpret the Bible, but the thought of exegetical method evokes a chill. Some textbooks on exegesis do nothing to overcome these apprehensions. The language is dense. The concepts are hard. And the expectations are way too high. However, the skills that we need to learn are ones that a minister of the gospel will use every week. Exegesis provides the process for listening, for hearing the biblical text as if you were an ordinary intelligent person listening to a letter from Paul or a Gospel of Mark in first-century Corinth or Ephesus or Antioch. This book by Richard Erickson will help you learn this skill. Thoroughly accessible to students, it clearly introduces the essential methods of interpreting the New Testament, giving students a solid grasp of basic skills while encouraging practice and holding out manageable goals and expectations. Numerous helps and illustrations clarify, summarize and illuminate the principles. And a wealth of exercises tied to each

chapter are available on the web. This is a book distinguished not so much by what it covers as by how: it removes the "fear factor" of exegesis. There are many guides to New Testament exegesis, but this one is the most accessible--and fun!

PRODUCT DESCRIPTION ModSecurity Handbook is the definitive guide to ModSecurity, a popular open source web application firewall. Written by Ivan Ristic, who designed and wrote much of ModSecurity, this book will teach you everything you need to know to monitor the activity on your web sites and protect them from attack. Situated between your web sites and the world, web application firewalls provide an additional security layer, monitoring everything that comes in and everything that goes out. They enable you to perform many advanced activities, such as real-time application security monitoring, access control, virtual patching, HTTP traffic logging, continuous passive security assessment, and web application hardening. They can be very effective in preventing application security attacks, such as cross-site scripting, SQL injection, remote file inclusion, and others. Considering that most web sites today suffer from one problem or another, ModSecurity Handbook will help anyone who has a web site to run. The topics

covered include: - Installation and configuration of ModSecurity - Logging of complete HTTP traffic - Rule writing, in detail - IP address, session, and user tracking - Session management hardening - Whitelisting, blacklisting, and IP reputation management - Advanced blocking strategies - Integration with other Apache modules - Working with rule sets - Virtual patching - Performance considerations - Content injection - XML inspection - Writing rules in Lua - Extending ModSecurity in C

The book is suitable for all reader levels: it contains step-by-step installation and configuration instructions for those just starting out, as well as detailed explanations of the internals and discussion of advanced techniques for seasoned users. The official ModSecurity Reference Manual is included in the second part of the book. A digital version is available. For more information and to access the online companion, go to [www.modsecurityhandbook.com](http://www.modsecurityhandbook.com)

**ABOUT THE AUTHOR** Ivan Ristic is a respected security expert and author, known especially for his contribution to the web application firewall field and the development of ModSecurity, the open source web application firewall. He is also the author of Apache Security, a comprehensive security guide for the Apache web server. A frequent speaker at computer security conferences, Ivan is an active participant in the application security community, a member of the Open Web Application Security Project, and an officer of the Web Application Security Consortium.
