increasingly essential factor in the revitalization of low- to moderate-income communities. This cutting-edge text explores the intersection of CED and social work practice, which both focus on the well-being of indigent communities and the empowerment of individuals and the communities in which they live. This unique textbook emphasizes a holistic approach to community building that combines business and real-estate development with a focus on stimulating family self-reliance and community empowerment. The result is an innovative approach to rehabilitating communities in decline while preserving resident demographics. The authors delve deep into the social, political, human, and financial capital involved in effecting change and how race and regional issues can complicate approaches and outcomes. Throughout, they integrate case examples to illustrate their strategies and conclude with a consideration of the critical role social workers can play in developing CED's next phase.

Local functional systems that create inefficient islands of information are being replaced by expensive enterprise-wide applications that unify the functional areas; however, while we have not yet been able to completely and seamlessly integrate across functions, we find that the new islands of information are no longer functional but political, cultural, linguistic, and geographical. The global village is a reality and enterprise resource planning (ERP) implementations face new issues and challenges. Enterprise Resource

International Monetary Relations in the New Global Economy

Most studies of the world economy focus on highly developed countries and only on economic strategies. The New Global Economy in the Information Age is unique in integrating the political with the economic and in the truly global view it takes of the changes under way. It focuses on the effects of new computer and telecommunications technology in conditioning the policy choices of nation-states in both the less and more economically developed regions of the world. The authors analyze the new economic context in which nation-states operate, the main issues confronting them, and the way in which the politics of national development should change in the post-Cold War information age. They argue that the new world economy cannot be separated easily from the new world society, and that national and international politics is the cement binding the two.

This book focuses on how globalization is impacting contemporary Israel. It is a concise and originally argued introduction to Israel, but the author, Uri Ram, is careful to frame his analysis in a broader discussion of Israeli history and broader social currents. Focusing in particular on two defining – and conflicting – contemporary trends; one toward advanced liberal democracy with a cosmopolitan edge, and the other toward ethno-religious traditionalism and rejection of the secularism associated with market driven globalization. The cosmopolitan, high-tech driven city of Tel Aviv represents the former trend, and Jerusalem – a city increasingly dominated by orthodox Jews – represents the latter. Using Benjamin Barber's Jihad versus McWorld thesis to good effect, Ram's book will stand as an ideal introduction to contemporary Israel and its place in the world.

postnational restructuring of the world in an era of transnational capitalism has altered how we must think about cultural production. Mapping a "new world space" that is simultaneously more globalized and localized than before, these essays examine the dynamic between the movement of capital, images, and technologies without regard to national borders and the tendency toward fragmentation of the world into increasingly contentious enclaves of difference, ethnicity, and resistance. Ranging across issues involving film, literature, and theory, as well as history, politics, economics, sociology, and anthropology, these deeply interdisciplinary essays explore the interwoven forces of globalism and localism in a variety of cultural settings, with a particular emphasis on the Asia-Pacific region. Powerful readings of the new image culture, transnational film genre, and the politics of spectacle are offered as is a critique of globalization as the latest guise of colonization. Articles that unravel the complex links between the global and local in terms of the unfolding narrative of capital are joined by work that illuminates phenomena as diverse as "yellow cab" interracial sex in Japan, machinic desire in Robocop movies, and the Pacific Rim city. An interview with Fredric Jameson by Paik Nak-Chung on globalization and Pacific Rim responses is also featured, as is a critical afterword by Paul Bové. Positioned at the crossroads of an altered global terrain, this volume, the first of its kind, analyzes the evolving transnational imaginary—the full scope of contemporary cultural production by which national identities of political allegiance and economic regulation are being undone, and in which imagined

The book first examines some radical new directions in Korea's regional policies instigated by the newly established permanent Presidential Commission of Regional Development. the new policies (such as territorial cohesion, regional innovation and regional competitiveness) were inspired from abroad, especially Europe. There are also changes at the lower urban scale to modify Korea's traditional top-down strategies. Previous policies, named 'balanced national development', were targeted at undermining Seoul by redistributing activities, including government, to other parts of the country under the zero sum game assumption. The new policies aim to benefit both the Capital Region and other mega-regions under a 'win-win' assumption. The book evaluates these approaches. Original contributions from some of the field's foremost scholars - including Sang-Chuel Choe, Sir Peter Hall, Andreas Faludi, Michael Storper, Takashi Onishi, Maryann Feldman and Sam Ock Park - identify priorities for territorial integration, develop ideas for crossborder cooperation, discuss EU policy and policies for overall regional competitiveness, examine the construction of regional entrepreneurial advantage and consider fiscal policy and decision-making.

Over the past two decades, governments have delegated extensive regulatory authority to international private-sector organizations. This internationalization and privatization of rule making has been motivated not only by the economic benefits of common rules for global markets, but also by the realization that government regulators often lack the expertise and resources to deal with increasingly complex and urgent regulatory tasks. *The New Global Rulers* examines who writes the rules in international private organizations, as well as who wins, who loses--and why. Tim Büthe and Walter Mattli examine three powerful global private regulators: the International Accounting Standards Board, which develops financial reporting rules used by corporations in more than a hundred countries; and the International Organization for Standardization and the International Electrotechnical Commission, which account for 85 percent of all international product standards. Büthe and Mattli offer both a new framework for understanding global private regulation and detailed empirical analyses of such regulation based on multi-country, multi-industry business surveys. They find that global rule making by technical experts is highly political, and that even though rule making has shifted to the international level, domestic institutions remain crucial. Influence in this form of global private governance is not a function of the economic power of states, but of the ability of domestic standard-setters to provide timely information and speak with a single voice. Büthe and Mattli show how domestic institutions' abilities differ, particularly between the two main standardization

The politics and economics of the United States are wedded in the political economy of the nation state and the nationalist economic policies. This 'nationalist paradigm' is, however, showing the following signs of fatigue: the role of the nation state is diminishing as the economy globalizes; US national accounting systems are less effective, technology forces change; trading blocs are emerging; there is less control of exchange rates; regional economies are restructuring; and competitive environments are changing. This book proposes that political jurisdictions are not economies but polities, and explores the complex and important economic implications of this thesis.

The New Global Economy in the Information Age : Reflections on Our Changing World

The International Labour Organization was created in 1919, as part of the Treaty of Versailles that ended the First World War, to reflect the belief that universal and lasting peace can be accomplished only if it is based on social justice. As the oldest organisation in the UN system, approaching its 100th anniversary in 2019, the ILO faces unprecedented strains and challenges. Since before the financial crisis, the global economy has tested the limits of a regulatory regime which was conceived in 1919. The organisation's founders only entrusted it with balancing social progress with the constraints of an interconnected open economy, but gambled almost entirely on tools of persuasion to ensure that this would happen. Whether that gamble is still capable of paying-off is the subject of this book, by a former ILO insider with an unrivalled knowledge of its work. The book forms part of a broader inquiry into the relevance of founding institutional principles to today's context, and strives to show that the bet made on persuasion may yet pay off. In part, the text argues that there may be little alternative anyway, showing that the pathways to more binding solutions are fraught with difficulty. It also shows the ILO's considerable future potential for promoting effective, universal regulations by extending its tools of persuasion in as yet insufficiently explored directions. Starting with an examination of how the organisation's institutional context differs from 93 years ago, the author goes on

to evaluate the prospects of numerous proposals put forward today, including the trade/labour linkage, but going beyond this. As a case study in how strategic choices can be made under legal, social and institutional constraints, the book should be valuable not only to those with an interest in the ILO, but to anyone who studies international organisation, labour law, law and society or political economy.

Knowledge has in recent years become a key driver for growth of regions and nations. This volume empirically investigates the emergence of the knowledge economy in the late 20th century from a regional point of view. It first deals with the theoretical background for understanding the knowledge economy, with knowledge spillovers and development externalities. It then examines aspects of the relationship between knowledge inputs and innovative outputs in the information, computer and telecommunications sector (ICT) of the economy at the regional level. Case studies focusing on a wide variety of sectors, countries and regions finally illustrate important regional innovation issues.

western coalitions responded to the profound challenges of mass terrorism and political violence - alternatives which can better address the roots of these challenges and deliver political and social justice. In order to grasp this alternative, the changing structure of the global order has to be understood. To this end, the book is divided into three sections: economics, politics and law. In each section contemporary trends are analyzed, problems confronted, and a series of detailed policies set out. The aim of the book is to focus on feasible and effective policy choices which could lead to a progressive transformation of global affairs. Against the ideologues who are wholly in favour or hostile to globalization, this book shows how globalization can be better regulated to deliver human development, equitable economic change, democracy and justice. This is an original book that will appeal to all those - students, policy makers, and the general reader - who confront questions about globalization and global governance. It is an optimistic text that holds that progressive political change is still within our grasp. shape our world - from Adam Tooze, the Wolfson Prize-winning author of *The Wages of Destruction* In the depths of the Great War, with millions of dead and no imaginable end to the conflict, societies around the world began to buckle. As the cataclysmic battles continued, a new global order was being born. Adam Tooze's panoramic new book tells a radical, new story of the struggle for global mastery from the battles of the Western Front in 1916 to the Great Depression of the 1930s. The war shook the foundations of political and economic order across Eurasia. Empires that had lasted since the Middle Ages collapsed into ruins. New nations sprang up. Strikes, street-fighting and revolution convulsed much of the world. And beneath the surface turmoil, the war set in motion a deeper and more lasting shift, a transformation that continues to shape the present day: 1916 was the year when world affairs began to revolve around the United States. America was both a uniquely powerful global force: a force that was forward-looking, the focus of hope, money and ideas, and at the same time elusive, unpredictable and in fundamental respects unwilling to confront these unwished for responsibilities. Tooze shows how the fate of effectively the whole of civilization - the British Empire, the future of peace in Europe, the survival of the Weimar Republic, both the Russian and Chinese revolutions and stability in the Pacific - now came to revolve around this new power's fraught relationship with a shockingly changed world. *The Deluge* is both a brilliantly illuminating exploration of the past and an essential history for the present.
