## **Great Business Meetings, Greater Business Results!**

Networks of relationships help determine the careers that people choose, the jobs they obtain, the products they buy, and how they vote. The many aspects of our lives that are governed by social networks make it critical to understand how they impact behavior, which network structures are likely to emerge in a society, and why we organize ourselves as we do. In *Social and Economic Networks*, Matthew Jackson offers a comprehensive introduction to social and economic networks, drawing on the latest findings in economics, sociology, computer science, physics, and mathematics. He provides empirical background on networks and the regularities that they exhibit, and discusses random graph-based models and strategic models of network formation. He helps readers to understand behavior in networked societies, with a detailed analysis of learning and diffusion in networks, decision making by individuals who are influenced by their social neighbors, game theory and markets on networks, and a host of related subjects. Jackson also describes the varied statistical and modeling techniques used to analyze social networks. Each chapter includes exercises to aid students in their analysis of how networks function. This book is an indispensable resource for students and researchers in economics, mathematics, physics, sociology, and business.

## **Relationship Maintenance and Repair Manual**

Intuitively business leaders know that meetings can be very good - potentially. Executives and team leaders are constantly hosting business meetings, and attending many as well, and most realize that expertly run meetings can function as forums for setting corporate goals and plans of action, can effect team unity and company loyalty, can identify successes and failures, and create better future outcomes. But while business meetings have all these potential benefits, too often they're not effective, and can even be counterproductive, simply because business leaders fail to keep in mind practical considerations and best practices. This book is about those best practices, how to master them, and use them as jumping off points for bettering your organization's tactical goals and strategic plans. In this book Christopher Hosford brings years of experience of great and ghastly business meetings - and focuses precisely on what is necessary to turn them into those successful, dynamic drivers of business. His insights, tips and advice are all proven to make your meetings far more productive. Christopher has had a varied career in education, and in consumer and trade journalism. Born in Atlanta and raised in Miami, Chris is a graduate of Christopher Columbus Catholic High School for Boys (Miami, FL), and the University of Florida (Gainesville, FL), where he majored in English and won varsity letters in track & field. After graduation, Chris taught high school English and drama in Jacksonville, FL, and coached track and cross-country teams, before turning his attention to journalism. Currently, Chris is editor-in-chief of HosfordGroup LLC, a New York content marketing

agency specializing in strategic marketing consulting and the development and application of sales and marketing content in support of programs and campaigns. He continues to contribute regularly to Crain's New York Business and Advertising Age magazine. With the wide experience in different spheres, he brings a balanced and rigorous analysis and prescription to creating and running the best business meetings possible.

The study of development in low-income countries is attracting more attention around the world than ever before. Yet until now there has been no comprehensive text that incorporates the huge strides made in the subject over the past decade. Development Economics does precisely that in a clear, rigorous, and elegant fashion. Debraj Ray, one of the most accomplished theorists in development economics today, presents in this book a synthesis of recent and older literature in the field and raises important questions that will help to set the agenda for future research. He covers such vital subjects as

theories of economic growth, economic inequality, poverty and undernutrition, population growth, trade policy, and the markets for land, labor, and credit. A common point of view underlies the treatment of these subjects: that much of the development process can be understood by studying factors that impede the efficient and equitable functioning of markets. Diverse topics such as the new growth theory, moral hazard in land contracts, information-based theories of credit markets, and the macroeconomic implications of economic inequality come under this common methodological umbrella. The book takes the position that there is no single cause for economic progress, but that a combination of factors--among them the improvement of physical and human capital, the reduction of inequality, and institutions that enable the background flow of information essential to market performance--consistently favor development. Ray supports his arguments throughout with examples from around the world. The book assumes a knowledge of only introductory economics and explains sophisticated concepts in simple, direct language, keeping the use of mathematics to a minimum. Development Economics will be the definitive textbook in this subject for years to come. It will prove useful to researchers by showing intriguing connections among a wide variety of subjects that are rarely discussed together in the same book. And it will be an important resource for policy-makers, who increasingly find themselves dealing with complex issues of growth, inequality, poverty, and social welfare.
