Drawing on his technical expertise and time-tested teaching methods, Glossbrenner makes it easy for everyone to install GEnie and enjoy its many information and entertainment services. The complete start-up kit also includes Aladdin the GEnie terminal emulation software that can save users the cost of the book in just 10 hours of typical on-line time.

The role of data management becomes more and more crucial in a totally connected world. Having the right data at the right time at the right place is therefore one of the most challenging research issues we face in the coming years. This Festschrift volume is devoted to Hartmut Wedekind on the occasion of his 70th birthday and comprises a total of 18 articles discussing a broad spectrum of issues related to data management. All articles are (co-)authored by academic children and grandchildren of Hartmut Wedekind and therefore reflect the multifaceted selection of academic topics that he explored, discussed, and published on during his academic life. All articles are clustered into four different parts, focusing on motivation and modeling issues, infrastructural services, application design, and finally different applications. The scope of the articles reaches from visionary illustrations of data management in a connected world through core database techniques in the context of database caching, notification services, etc., to the design and description of data-intensive applications.

Information and Communication Technologies in Tourism

Regulatory and Technical Reports

Regulatory and Technical Reports

The proceedings of the conference ENTER - International Conference on Information and Communication Technologies in Tourism - provide an international forum for the discussion of the role of telecommunication and information systems in tourism, inform potential users and people concerned with the importance of such technologies and explain their functioning, and finally intensify the contact and the communication between researchers, system developers and users. The main topics of ENTER 96 are business engineering and standardisation, covering a wide area of subjects like the redesign of touristic products and the processes of their production. This covers, however, not only single business processes but the entire value chain in tourism, ending up in redesign of distribution channel and changing relations among principals, tour operators, travel agents and customers.

Includes indexes.

Internet 101

We are facing a future of unbounded complexity. Whether that complexity is harnessed to build a world that is safe, pleasant, humane and profitable, or whether it causes us to career off a cliff into an abyss of mind-numbing junk is an open question. The challenges and opportunities--technical, business, and human--that this technological sea change will bring are without precedent. Entire industries will be born and others will be laid to ruin as our society navigates this journey. There are already many more computing devices in the world than there are people. In a few more years, their number will climb into the trillions. We put microprocessors into nearly every significant thing that we manufacture, and the cost of routine computing and storage is rapidly becoming negligible. We have literally permeated our world with computation. But more significant than mere numbers is the fact we are quickly figuring out how to make those processors communicate with each other, and with us. We are about to be faced, not with a trillion isolated devices, but with a trillion-node network: a network whose scale and complexity will dwarf that of today's Internet. And, unlike the Internet, this will be a network not of computation that we use, but of computation that we live in. Written by the leaders of one of America's leading pervasive computing design firms, this book gives a no-holds-barred insiders' account of both the promise and the risks of the age of Trillions. It is also a cautionary tale of the head-in-the-sand attitude with which many of today's thought-leaders are at present approaching these issues. Trillions is a field guide to the future--designed to help businesses and their customers prepare to prosper, in the information.

Directory of Online Data Bases

This book constitutes the refereed proceedings of the 6th International Conference on Service-Oriented Computing, ICSOC 2008, held in Sydney, Australia, in

December 2008. The 32 revised full papers and 20 short papers of the research track presented together with 6 industrial papers, 6 demonstration papers of the industrial track, and the abstracts of 4 keynote lectures were carefully reviewed and selected from a total of 184 submissions. The papers present original research in the field of service oriented computing, from theoretical and foundational results to empirical evaluations as well as practical and industrial experiences. Topics addressed include services foundations, business service modelling, integrating systems of systems using services, service engineering, service assembly, service management, SOA runtime, quality of service, service applications (grid, e-science, government, etc.), as well as business and economical aspects of services.

Service-Oriented Computing - ICSOC 2008

Based on the board curriculum of the 3-degree course of the National Council for Hotel Management& Catering Technology, this Comprehensive text book aims to cover all relevent aspects and issues related to food & beverage management in the fast growing hotel & hispitality.

Proceedings

Subject coverage: general business information--trade newsletters, state news services, & newspapers devoted solely to business & industry.

Data Systems

This is the story of the first jet versus jet war, the largest in number of victories and losses, and one of the few military bright spots in the Korean War. It tells how an outnumbered force of F-86 Sabres limited by range and restricted by the rules of engagement, decisively defeated its foe. Based on the latest scholarship, author Kenneth Werrell uses previously untapped sources and interviews with sixty former F-86 pilots to explore new aspects of the subject and shed light on controversies previously neglected. For example, he found much greater violation of the Yalu River than thus far has appeared in the published materials. The F-86 became a legend in "The Forgotten War" because of its performance and beauty, but most of all, because of its record in combat.
