Mastering Flash Photography

For aspiring photographers ready to transform their work from average to expert, here is the "bible" to lighting any subject and space effectively. In specific but nontechnical terms, *Photographic Lighting Simplified* explains how to take light sources—from outdoor bright sunlight to indoor household lighting—and recreate their effects in the studio. A series of enjoyable, hands-on assignments show readers tips for selecting the right camera format, film, and lenses; the basics of metering and testing; overviews of essential equipment for studio lighting; and much more. Plus, dozens of step-by-step illustrations demonstrate an array of techniques for lighting reflective metal and glass objects; lighting different face types and groups; and special lighting considerations for digital cameras. For anyone who is serious about taking better photographs, this is the ultimate success guide.

How to Control & Use Photographic Lighting

Solutions to the serious photographer's biggest challenge--on-site lighting dilemmas--are fully revealed and diagrammed in this book, illustrated with exciting assignment shots from locations around the world. On-location lighting is a subspecialty of one of the best-selling subjects in photography--professional lighting. *Secrets of Lighting on Location* is the first illustrated how-to book to address the topic using beautiful before-and-after photos from the real assignment shoots of well-known photographers. The photos are enough to make almost any photographer pick up the book, but the myriad specifications for problem solving and the resource guide at the end give reason to buy it. Included are light ratios, flash set-up formulas, and clues for using incandescent and quartz lights, umbrellas, soft boxes, light panels, and fiber optics. Presented in an easy-reference format, the book will invite readers to refer to it again and again. With the techniques in *Secrets*, commercial photographers can transform even the most difficult glamour-shooting environment through the creative and knowledgeable manipulation of light. How to modify and correct nearly all types of problem light sources with filters, reflectors, and diffusers is shown, plus examples of how several professionals solved lighting problems

they've encountered themselves. Bob Krist, assignment photographer for many magazines, including National Geographic and Travel & Leisure, runs his own stock agency and is the author of Caribbean (Graphic Arts, 1991). He lives in Ridgewood, New Jersey.
