The Farrell name is respected all along the British Columbia coast. Barrie's father, Allen Farrell, was a much loved eccentric who created offshore sailing vessels from beachcombed lumber using only basic hand tools. Barrie built his first boat in his early teens using only a dull handsaw, a rusty block plane and an old hammer with one claw. Despite his Grade Six education, Barrie became one of the leading innovators when fibreglass first became available. His designs incorporated flowing

curves and shaped details that were not possible with wood. Barrie was one of the first to realize that modern fishboats needed to be fast, and consequently, his gillnetters and trollers dominated the BC salmon fleet in the 1970s and 1980s. By the late 1990s, he had built over 300 commercial and pleasure boats and left a profound stamp on West Coast boat building. Boats in My Blood isn't just about the boats. Barrie also shares the story of his life—the highs and the lows. His memories of growing up in Pender Harbour provide an amusing picture of fishing village life in the 1950s, and his sharp eye for character makes for many amusing anecdotes. He is frank about his periodic bouts of overzealous partying and his bad business dealings, but through it all his engaging character and unquenchable good nature shine through. Boats in My Blood is a fascinating chronicle of a life devoted to the art of the boat.

The great Indian Buddhist master Nagarjuna wrote his celebrated poem Letter to a Friend as a gift of advice to a South Indian king, and it has since become a monument in the Indian shastra tradition. Despite its short length (only 123 verses), it covers the entire Mahayana path, combining a practical approach to daily conduct with a theoretical exposition of the different stages leading to enlightenment. It has thus been an ideal source for many of Tibet's greatest scholars seeking a scriptural authority to enhance their own descriptions of the Buddhist path. In addition to a new English translation of the poem followed by the original Tibetan, this book includes commentary and a structural outline by the great twentieth-century scholar Kyabje Kangyur Rinpoche.

Readers gain a solid understanding of Newtonian dynamics and its application to real-world problems with Pytel/Kiusalaas' ENGINEERING MECHANICS: DYNAMICS, 4E. This edition clearly introduces critical concepts using learning features that connect real problems and examples with the fundamentals of engineering mechanics. Readers learn how to effectively analyze problems before substituting numbers into formulas. This skill prepares readers to encounter real life problems that do not always fit into standard formulas. The book begins with the analysis of particle dynamics, before considering the motion of rigid-bodies. The book discusses in detail the three fundamental methods of problem solution: force-mass-acceleration, work-energy, and impulse-momentum, including the use of numerical methods.
