The History of Medicine: A Very Short Introduction

The Beagle Record

A modern geneticist revisits Darwin's classic work to offer contemporary examples and modern research that confirm the book's conclusions on evolution.

Womanskills

Explore Darwin's pioneering work on fossils in this richly illustrated book. In *On the Origin of Species* Charles Darwin credited his discoveries of fossils, as much as those of living creatures, as the stimulus for his theory of evolution. *Darwin's Fossils* is an accessible account of his pioneering work on fossils, his adventures in South America and his relations with the scientific establishment. While Darwin's work on Galapagos finches is celebrated, his pioneering work on fossils is much less well known. He was the first to collect the remains of giant extinct South American mammals; he worked out how coral reefs and atolls formed; he excavated and explained marine fossils high in the Andes; and he discovered a fossil forest that now bears his name. All of this was fundamental in leading him to his theory of evolution. Many of Darwin's fossils survive, at the Natural History Museum and elsewhere, and recent years have seen a surge of scientific interest and research into them. Richly illustrated with new photography of many of the fossils, superb line drawings produced in the 19th century, and newly-commissioned artists' reconstructions of the extinct animals as understood today, *Darwin's Fossils* reveals how fossils played a crucial role in the development of his

revolutionary ideas.

HMS Beagle Voyage and the Galápagos Islands

This is the story of the man without whom the name Charles Darwin might be unknown to us today. That man was Captain Robert FitzRoy, who invited the 22-year-old Darwin to be his companion on board the Beagle . This is the remarkable story of how a misguided decision by Robert FitzRoy, captain of HMS Beagle , precipitated his employment of a young naturalist named Charles Darwin, and how the clash between FitzRoy's fundamentalist views and Darwin's discoveries led to FitzRoy's descent into the abyss. One of the great ironies of history is that the famous journey—wherein Charles Darwin consolidated the earth-rattling 'origin of the species' discoveries—was conceived by another man: Robert FitzRoy. It was FitzRoy who chose Darwin for the journey—not because of Darwin's scientific expertise, but because he seemed a suitable companion to help FitzRoy fight back the mental illness that had plagued his family for generations. Darwin did not give FitzRoy solace; indeed, the clash between the two men's opposing views, together with the ramifications of Darwin's revelations, provided FitzRoy with the final unendurable torment that forced him to end his own life.

The Origin of Species

V. 49--Epic and saga.

A Naturalist's Voyage Round the World

Narrative of the Surveying Voyages of His Majesty's Ships Adventure and Beagle

Inside the Beagle with Charles Darwin takes readers around the world on a voyage of discovery with the famous scientist, from his early meeting with Captain Fitzroy to his modest return nearly five years later. The book also looks at seafaring in the early 19th-century, including navigation equipment, the captain and crew, and life on board ship. We explore in depth the discoveries which Darwin made on the voyage, the specimens he gathered and the conclusions he came to. The final part of the book deals with his famous writings and the contemporary reaction to the idea of evolution. The book features cutaway diagrams of the ship, illustrations of the journey, maps, contemporary paintings, and photographs from Darwin's published works. Informative captions, a complete glossary, time lines and an index make this title an ideal educational text. It is an ideal text for shared and guided reading for Key Stage 2 pupils within the framework of the National Literacy Strategy. It helps achieve the goals of the Scottish Standard Curriculum 5-14, promoting 'positive attitudes to learning', 'knowledge, understanding and appreciation of the world' and 'skills in literacy'.

Werner's Nomenclature of Colours

This Very Short Introduction explores the history of Western medicine, examining

the key turning points, discoveries, and controversies in its rich history from classical times to the present.

Natural History and Geology

This is a comprehensive reference work which surveys all aspects of the history of medicine, both clinical and social, and reflects the complementary approaches to the discipline. The editors have assembled an international team of scholars to provide detailed and informative factual surveys with contemporary interpretations and historiographical debate. Special Features * Comprehensive: 72 substantial and original essays from internationally respected scholars * Unique: no other publication provides so much information in two volumes * Broad-ranging: includes coverage of non-Western as well as Western medicine * Up-to-date: incorporates the very latest in historical research and interpretation * User-friendly: clearly laid out and readable, with a full index of Topics and People * Indispensable: essential information for study and research, including bibliographic notes and cross-referencing between articles.

Darwin's Ghost

Originally published in 1979, this volume gathers together an account of the voyage of HMS Beagle round the world in 1831-6.

Darwin, His Daughter, and Human Evolution

Collects Darwin's four seminal works in a slipcase, introduced and edited by a two-time Pulitzer Prize-winning Harvard professor, and includes an index that links Darwinian evolutionary concepts to contemporary biological beliefs.

Science and the Practice of Medicine in the Nineteenth Century

The theories propounded by Charles Darwin in *The Origin of Species* have had a profound and revolutionary effect, not only on biology but also on philosophy, history, and theology. His concept of natural selection has created eruptive disputes among scientists and religious leaders of his time and ours. The phenomenal importance of his brilliant work is universally recognized, but the present volume marks the first scholarly attempt to compile a complete variorum edition of *The Origin of Species*, covering all of the extensive variants in the six texts published between 1859 and 1872. Darwin's changes were extensive. His book grew by a third as he rewrote many passages four or five times, and in this edition Morse Peckham has recorded every one of those changes. A book of such distinctive dimensions, on a subject of such profound importance, will be of intense interest to historians of biology, evolution, science, literature, and cultural development. It will be an invaluable aid to the clarification and full comprehension of this complex and renowned scientific classic.

The Harvard Classics: Darwin, Charles R. The voyage of the Beagle

In 1831, young adventurer and nature enthusiast Charles Darwin set sail on a remarkable five-year voyage that changed the study of biology forever. Award-winning author Ruth Ashby shares the story of Darwin's famous journey aboard the British navy ship, the Beagle, which led to the development of his theories of evolution and natural selection. This lively account follows the naturalist's exciting trip around the world—through seasickness, a life-threatening illness, and even an earthquake—as he explores South America, the Cape Verde Islands, Tahiti, and the Galapagos Islands. During his travels, Darwin meets indigenous peoples and carefully collects and catalogs plants, fossils, birds, mammals, and insects. Darwin's observations of the distribution and diversity of plant and animal life ultimately leads to the development of his theories on evolution. Readers will be inspired by Darwin's transformation from talented but mediocre schoolboy into a remarkable scientist as they read about the revolutionary voyage that forever changed the world of biology.

Evolution's Captain

“The ultimate literary bucket list.” —THE WASHINGTON POST Celebrate the pleasure of reading and the thrill of discovering new titles in an extraordinary book that's as compulsively readable, entertaining, surprising, and enlightening as the 1,000-plus titles it recommends. Covering fiction, poetry, science and science fiction, memoir, travel writing, biography, children's books, history, and more, 1,000 Books to Read Before You Die ranges across cultures and through time to offer an eclectic collection of works that each deserve to come with the recommendation, You have to read this. But it's not a proscriptive list of the “great works”—rather, it's a celebration of the glorious mosaic that is our literary heritage. Flip it open to any page and be transfixed by a fresh take on a very favorite book. Or come across a title you always meant to read and never got around to. Or, like browsing in the best kind of bookshop, stumble on a completely unknown author and work, and feel that tingle of discovery. There are classics, of course, and unexpected treasures, too. Lists to help pick and choose, like Offbeat Escapes, or A Long Climb, but What a View. And its alphabetical arrangement by author assures that surprises await on almost every turn of the page, with Cormac McCarthy and The Road next to Robert McCloskey and Make Way for Ducklings, Alice Walker next to Izaak Walton. There are nuts and bolts, too—best editions to read, other books by the author, “if you like this, you'll like that” recommendations, and an interesting endnote of adaptations where appropriate. Add it all up, and in fact there are more than six thousand titles by nearly four thousand authors mentioned—a life-changing list for a lifetime of reading. “948 pages later, you still want more!” —THE WASHINGTON POST

The Voyage of the Beagle by Charles Darwin

Winner of the Pulitzer Prize Winner of the Los Angeles Times Book Prize On a desert island in the heart of the Galapagos archipelago, where Darwin received his first inklings of the theory of evolution, two scientists, Peter and Rosemary Grant, have spent twenty years proving that Darwin did not know the strength of his own theory. For among the finches of Daphne Major, natural selection is neither rare nor slow: it is taking place by the hour, and we can watch. In this dramatic story of groundbreaking scientific research, Jonathan Weiner follows these scientists as

they watch Darwin's finches and come up with a new understanding of life itself. The Beak of the Finch is an elegantly written and compelling masterpiece of theory and explication in the tradition of Stephen Jay Gould. With a new preface.

From So Simple a Beginning

A fascinating record of one of the most famous journeys ever made, providing an accurate historical document as well as an evocative travelogue that conveys Charles Darwin's personal account of the voyage with freshness and immediacy. From the reviews: 'a record of his immediate feelings, the sea-sickness, the triumphs of his palaeontological finds, close shaves with General Rosas and military activity in Patagonia, drinking maté and smoking cigarillos with the Gaucho, the stars glittering over the Andes vivid and expressive' Janet Browne

Round the World

When the Beagle sailed out of Devonport on 27 December 1831, Charles Darwin was twenty-two and setting off on the voyage of a lifetime. It was to last five years and transform him from an amiable and somewhat aimless young man into a scientific celebrity. Even more vitally, it was to set in motion the intellectual currents that culminated in the arrival of *The Origin of Species* in Victorian drawing-rooms in 1859. His journal is vivid and immediate, showing us a naturalist making patient observations, above all in geology. As well as a profusion of natural history detail, it records many other things that caught Darwin's eye, from civil war in Argentina to the new colonial settlements of Australia.

The Voyage of the Beagle

W. F. Bynum argues that 'modern' medicine is built upon foundations established between 1800 and the beginning of World War I.

Charles Darwin in Australia

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

The Origin of Species and the Voyage of the Beagle

Many of the earliest books, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

The Voyage of the Space Beagle

Consider Womanskills the Cliff's Notes on being a self-sufficient adult. This guidebook has practical how-tos, relationship tips, and more--offering everything a woman needs (but maybe didn't learn) growing up.

Galapagos, World's End

The Voyage of the Beagle

On December 27, 1831, the HMS Beagle set sail from Plymouth harbor. On board were a crew of 73 men, Captain Robert Fitzroy, and a young naturalist named Charles Darwin. The expedition lasted almost five years, during which time Darwin kept extensive field journals collecting important scientific data that would inform his later discoveries. The exciting account of Darwin's voyage is sure to captivate readers and the enlightening subject matter will support their developing awareness of social studies and science concepts.

Inside the Beagle with Charles Darwin

A re-release of a golden-age classic follows the episodic adventures of a great space ship that explores the far reaches of the galaxy and chronicles their encounters with myriad alien beings, including the Ix, who lay their eggs in human bodies. Reprint. 12,500 first printing.

A Naturalist's Voyage

Galapagos, a Natural History

The Beagle has become synonymous with Charles Darwin and his groundbreaking title *On the Origin of Species*. But how did Darwin come to be on board? For the first time in a single volume all the various strands of the Beagle story have been woven together to reveal the circumstances that set the expedition in motion and the characters who circumnavigated the world together. Enriched with first-hand commentary from personal letters and diaries, and the official narrative of the voyage, as well as artworks, sketches and charts produced by the shipboard artists and surveyors, James Taylor has produced a thoroughly engaging and informative account that will appeal to historians, scientists, art lovers, and anyone with a sense of adventure.

This Thing Of Darkness

The Voyage of the Beagle

This book details the natural history of the plants and animals found in the Galapagos Islands. A list of the dominant plants according to vegetation zone is included. Of particular note is the discussion of the problems of colonisation by founding populations, biological evolution, and ecology, and of the evolutionary processes bringing about species diversity.

Charles Darwin and the Voyage of the Beagle

WITH AN INTRODUCTION BY DARWIN'S GREAT-GREAT-GRANDDAUGHTER, RUTH PADEL When the eminent naturalist Charles Darwin returned from South America on board the H.M.S Beagle in 1836, he brought with him the notes and evidence which would form the basis of his landmark theory of evolution of species by a process of natural selection. This theory, published as *The Origin of Species* in 1859, is the basis of modern biology and the concept of biodiversity. It also sparked a fierce scientific, religious and philosophical debate which still continues today.

Companion Encyclopedia of the History of Medicine

Chapter I Porto Praya—Ribeira Grande—Atmospheric Dust with Infusoria—Habits of a Sea-slug and Cuttle-fish—St. Paul's Rocks, non-volcanic—Singular Incrustations—Insects the first Colonists of Islands—Fernando Noronha—Bahia—Burnished Rocks—Habits of a Diodon—Pelagic Confervæ and Infusoria—Causes of discoloured Sea. ST. JAGO—CAPE DE VERD ISLANDS After having been twice driven back by heavy south-western gales, Her Majesty's ship "Beagle," a ten-gun brig, under the command of Captain Fitz Roy, R.N., sailed from Devonport on the 27th of December, 1831. The object of the expedition was to complete the survey of Patagonia and Tierra del Fuego, commenced under Captain King in 1826 to 1830--to survey the shores of Chile, Peru, and of some islands in the Pacific--and to carry a chain of chronometrical measurements round the World. On the 6th of January we reached Teneriffe, but were prevented landing, by fears of our bringing the cholera: the next morning we saw the sun rise behind the rugged outline of the Grand Canary Island, and suddenly illumine the Peak of Teneriffe, whilst the lower parts were veiled in fleecy clouds. This was the first of many delightful days never to be forgotten. On the 16th of January 1832 we anchored at Porto Praya, in St. Jago, the chief island of the Cape de Verd archipelago.

Charles Darwin and the Voyage of the Beagle

Charles Darwin's Diary of the Voyage of H.M.S. Beagle

Darwin's notes from his 1831 trip provide an account of the HMS "Beagle" and the first hints of his theory of evolution and natural selection

Journal of Researches During the Voyage of H.M.S. "Beagle"

1,000 Books to Read Before You Die

In 1835, Charles Darwin observed variations among the Galapagos Islands' species that inspired him to formulate the theory of natural selection. Eighty-eight years later, in 1923, a scientific expedition sponsored by the New York Zoological Society followed in Darwin's wake. Led by the author, a biologist and explorer, the scientists visited the the islands to study and obtain specimens of indigenous plants and animals. This is his personal account of that expedition. He recounts the expedition's productive results, including specimens of 60 species previously unknown to science, and an unparalleled accumulation of data that stimulated many scientific papers and new avenues of naturalistic inquiry.

Charles Darwin's Beagle Diary

Darwin's Fossils

The Beak of the Finch

This is Charles Darwin's chronicle of his five-year journey, beginning in 1831, around the world as a naturalist on the H.M.S. Beagle.

The Voyage of the Beagle

Drawing upon Darwin's diary, this book traces Darwin's travels in Australia in 1836.

The Zoology of the Voyage of H.M. S(hip) Beagle, Under the Command of Capt. Fitzroy, During the Years 1832-36

In a chest of drawers bequeathed by his grandmother, author Randal Keynes discovered the writing case of Charles and Emma Darwin's beloved daughter Annie Darwin, who died at the age of ten. He also found the notes Darwin kept throughout Annie's illness, the eulogy he delivered at her funeral—and provocative new insights into Darwin's views on nature, evolution, and the human condition. In *Darwin, His Daughter & Human Evolution*, Keynes shows that Darwin was not "a cold intellect with no place for love in his famous 'struggle for existence,' [but] a man of uncommon warmth" (*Scientific American*). *Creation: The True Story of Charles Darwin* is now a major motion picture and the movie tie-in paperback is also available from Riverhead Books.

The Autobiography of Charles Darwin

A brilliant, action-packed and gripping novel of Charles Darwin's voyage on the Beagle - longlisted for the Man Booker Prize. In 1831 Charles Darwin set off in HMS

Beagle under the command of Captain Robert Fitzroy on a voyage that would change the world. 'An outstandingly good first novel. A page-turning action-adventure combined with subtle intellectual arguments. The meticulous research enriches this fascinating tale' Sunday Telegraph 'A master storyteller' Sunday Times Brilliant young naval officer Robert FitzRoy is given the captaincy of HMS Beagle, surveying the wilds of Tierra del Fuego. He's a man of tradition and principle, with a firm belief in the sanctity of the individual in a world created by God. On board, is a passenger, Charles Darwin - a young trainee cleric, and amateur geologist. This is the story of a deep friendship between two men, and the twin obsessions that tear them apart, leading one to triumph, and the other to disaster.
