## **Clinical Fluid Therapy in the Perioperative Setting**

Dr. G. M. Woerlee is well known in my department both as a clinician and teacher. Years of experience have taught him that the problems discussed here have as yet not been treated in this way in any single work. In my opinion there is a real need for such a book, not only for resident and specialist anaesthetists, but also among surgeons and internists, specialist and trainee. Management of a patient in the operating room is a matter of teamwork, and knowledge of the problems encountered is the basis of any mutual understanding! The information which has been assembled and clearly presented in this book should prove to be of great assistance in guiding our patients through an important phase of their lives. Professor Dr. Joh. Spierdijk, Department of Anaesthesia, University Hospital of Leyden, The Netherlands. vii PREFACE Much of the literature being published in the field of anesthesiology today concerns a narrow, in-depth scrutiny of a specific area or anesthetic technique that does not provide the novice with an overview of the perioperative period and the common everyday problems faced by the anesthetist. Dr G. M. Woerlee of the University of Leiden with his book, "Common Perioperative Problems and the Anaesthetist", has filled a void in the current anesthetic literature. Dr Woerlee reviews in a straightforward, no-frills manner problems routinely encountered during the perioperative period. Other anesthesia textbooks do not cover the material in quite the same logical, step-by-step fashion.

## **Transfusion Medicine and Hemostasis**

Before the 1st edition of the Textbook of Pediatric Emergency Medicine published, there was no official pediatric emergency medicine subspecialty in either pediatrics or emergency medicine. This book defined many of the treatments, testing modalities procedural techniques and approaches to care for the ill and injured child. As such, it was written with both the pediatrician and the emergency physician in mind. The Textbook of Pediatric Emergency Medicine, has an entirely new editorial board and templated chapters focusing on evidence-based diagnosis and management of pediatric patients in the ED. The book's content has been rewritten to eliminate and eliminate redundancy, creating succinct sections that pertain to patient care in the ED. Templated chapters include: Clinical Outcomes/Goals of Therapy Current Evidence Clinical Considerations Clinical Recognition: Triage Initial Assessment Management/Diagnostic Testing Clinical indications for discharge or admission, including parental instructions References In the ED, nurses and physicians work closely as a paired team, thus this edition reflects that partnership and offers content tailored to it. Online ancillaries, found in the bundled eBook, include Learning Links for nursing considerations and clinical pathways that outline the key steps to take when managing critically ill patients.

## **Update in Intensive Care and Emergency Medicine**

Historically, 20% of all injured combatants die on the battlefield before they can be evacuated to a field hospital. Blood loss--hemorrhage--is the single major cause of death among those killed in action whose lives might otherwise be saved. Fluid resuscitation and the treatment of hypovolemia (the abnormally decreased volume of circulating fluid in the body) offer the greatest opportunity for reducing mortality and morbidity associated with battlefield casualties. In Fluid Resuscitation, a committee of experts assess current resuscitation fluids and protocols for the treatment of combat

casualties and make recommendations for future research. Chapters focus on the pathophysiology of acute hemorrhagic shock, experience with and complications of fluid resuscitation, novel approaches to the treatment of shock, protocols of care at the site of injury, and future directions for research. The committee explicitly describes the similarities and differences between acute medical care during combat and civilian emergency trauma care. Fluid Resuscitation should help energize and focus research in both civilian and military emergency care and help save the lives of citizens and soldiers alike.

## **Sabiston and Spencer's Surgery of the Chest E-Book**

difficult, to represent it as the surgeon sees it, and to understand the anatomy, which is not always visible. In part, this was accomplished by painting on both surfaces of transparent paper to create the illusion of looking through superficial layers to the deeper structures. A combination of color media, including colored pencil, graphite, carbon, pastels, and transparent and opaque watercolors, enabled me to convey the field with minimal loss of reality or dimension. Of equal importance was the availability, for every illustration, of direct surgical observation, surgical photographs, fresh specimens, and the surgical

instruments. The sequence of creation was first the discussion of desired illustrations, then a rough sketch, consultation with the surgeons, finished pencil drawing, another consultation, and finally the color rendering. These color renderings were then checked against actual surgery for accuracy in representation of tissues, instrumentation, tissue responses to manipulation, and consistency of representation. From these processes evolved a technique that facilitated the flow of information, in logical sequence, from one step to the next and from one procedure to another, always focusing the attention of the audience toward what is pertinent and away from the extraneous.

Dr. G. M. Woerlee is well known in my department both as a clinician and teacher. Years of experience have taught him that the problems discussed here have as yet not been treated in this way in any single work. In my opinion there is a real need for such a book, not only for resident and specialist anaesthetists, but also among surgeons and internists, specialist and trainee. Management of a patient in the operating room is a matter of teamwork, and knowledge of the problems encountered is the basis of any mutual understanding! The information which has been assembled and clearly presented in this book should prove to be of great assistance in guiding our patients through an important phase of their lives. Professor Dr. Joh. Spierdijk, Department of Anaesthesia, University Hospital of Leyden, The Netherlands. vii PREFACE Much of the literature being published in the field of anesthesiology today concerns a narrow, in-depth scrutiny of a specific area or anesthetic technique that does not provide the novice with an overview of the perioperative period and the common everyday problems faced by the anesthetist. Dr G. M. Woerlee of the University of Leiden with his book, "Common Perioperative Problems and the Anaesthetist", has filled a void in the current anesthetic literature. Dr Woerlee reviews in a straightforward, no-frills manner problems routinely encountered during the perioperative period. Other anesthesia textbooks do not cover the material in quite the same logical, step-by-step fashion.
