INSTANT NEW YORK TIMES BESTSELLER “One of the most important books I’ve ever read—an indispensable guide to thinking clearly about the world.” – Bill Gates “Hans Rosling tells the story of ‘the secret silent miracle of human progress’ as only he can. But Factfulness does much more than that. It also explains why progress is so often secret and silent and teaches readers how to see it clearly.” —Melinda Gates “Factfulness by Hans Rosling, an outstanding international public health expert, is a hopeful book about the potential for human progress when we work off facts rather than our inherent biases.” - Former U.S. President Barack Obama Factfulness: The stress-reducing habit of only carrying opinions for which you have strong supporting facts. When asked simple questions about global trends—what percentage of the world’s population live in poverty; why the world’s population is increasing; how many girls finish school—we systematically get the answers wrong. So wrong that a chimpanzee choosing answers at random will consistently outguess teachers, journalists, Nobel laureates, and investment bankers. In Factfulness, Professor of International Health and global TED phenomenon Hans Rosling, together with his two long-time collaborators, Anna and Ola, offers a radical new explanation of why this happens. They reveal the ten instincts that distort our perspective—from our tendency to divide the world into two camps (usually some version of us and them) to the way we consume media (where fear rules) to how we perceive progress (believing that most things are getting worse). Our problem is that we don’t know what we don’t know, and even our guesses are informed by unconscious and predictable biases. It turns out that the world, for all its imperfections, is in a much better state than we might think. That doesn’t mean there aren’t real concerns. But when we worry about everything all the time instead of embracing a worldview based on facts, we can lose our ability to focus on the things that threaten us most. Inspiring and revelatory, filled with lively anecdotes and moving stories, Factfulness is an urgent and essential book that will change the way you see the world and empower you to respond to the crises and opportunities of the future. --- “This book is my last battle in my life-long mission to fight devastating ignorance Previously I armed myself with huge data sets, eye-opening software, an energetic learning style and a Swedish bayonet for sword-swallowing. It wasn’t enough. But I hope this book will be.” Hans Rosling, February 2017.

Authorization of control room personnel is a normal practice in all IAEA Member States operating nuclear power plants (NPPs). The authorization of personnel is based on whether personnel has a direct impact on safety in accordance with IAEA Safety Guide No. NS-G-2.8: Recruitment, Qualification and Training of Personnel for NPPs. The methods and practices for this authorization, however, are not identical, and the organization granting the authorization may be different. The various

authorization processes are usually based on written and/or oral examinations and in many cases also on the testing of practical skills. Differences in the authorization processes also exist in the examination methodology and in the scope of the practical examinations (e.g., plant walkthrough, use of simulators). The recent increase in the availability of full-scope simulators, in particular full-scope plant-referenced control room simulators, provides an additional, efficient tool for testing the practical skills of the candidates for authorization. Information contained in this document and on the accompanying CD-ROM provides useful guidance and a wide range of practical examples that will be helpful for both NPP operating organizations and regulatory bodies in developing and improving the processes of authorization of control room personnel.

This book takes a fresh look at the basic idea of 'literacy' and proposes some new definitions to take us into the twenty-first century. It brings together nine Australian scholars of distinction. They argue that schools must teach explicitly the nature

of language, and that students must be given clear criteria for, and support in achieving, excellence in controlling the different types of written language used in their various fields of study. Teachers need a clear sense of the changing nature of literacy, of the differences between speech and writing, and of the characteristic patterns of discourse used in the school subjects they teach. The arguments about literacy are made using examples selected from students' writing and textbooks, and demonstrate in a pleasing way the benefit to education of some selected linguistic research. This book is essential reading for educational policy makers and curriculum writers, as well as for teachers of all levels and disciplines.
